Install on Server: The Azure File Sync agent

**NEW QUESTION # 64**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains a single-domain Active Directory Domain Services (AD DS) forest named contoso.com. The functional level of the forest is Windows Server 2012 R2. All domain controllers run Windows Server 2012 R2. Sysvol replicates by using the File Replication Service (FRS).

You plan to replace the existing domain controllers with new domain controllers that will run Windows Server 2022.

You need to ensure that you can add the first domain controller that runs Windows Server 2022.

Solution: You upgrade the PDC emulator.

Does this meet the goal?

- A. Yes
- B. No

**Answer: B**

#### NEW QUESTION # 65

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an on-premises server named Server1 that runs Windows Server.

You have a Microsoft Sentinel instance.

You add the Windows Firewall data connector in Microsoft Sentinel.

You need to ensure that Microsoft Sentinel can collect Windows Firewall logs from Server1.

Solution: You install the Log Analytics agent on Server1

Does this meet the goal?

- A. Yes
- B. No

**Answer: B**

#### NEW QUESTION # 66

You have an on-premises server named Server 1 that runs Windows Server.

You have an Azure subscription.

You migrate Server1 to an Azure virtual machine named VM1.

You need to configure a backup solution for VM1. The solution must provide recovery points.

What should you do on VM1, and in which type of vault should you store the backups? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

On VM1:

- Install Windows Server Backup.
- Install the Azure-Connected Machine agent.
- Install the Windows Azure VM Agent

Vault type:

- Azure Key Vault
- Azure Backup
- Recovery Services vault

Microsoft

**Answer:**

Explanation:
