Plat-Dev-301 Valid Exam Blueprint | Plat-Dev-301 Test Discount

By purchasing our PDF4Test Salesforce Plat-Dev-301 dumps, you will finish the exam preparation. And then, you will get high quality tests questions and test answers. PDF4Test Salesforce Plat-Dev-301 test is your friend which is worth trusting forever. Our PDF4Test Salesforce Plat-Dev-301 Dumps Torrent provide certification training materials to the IT people in the world. It includes test questions and test answers. Quality product rate is 100% and customer rate also 100%.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q120-Q125):

NEW QUESTION # 120

A company has many different unit test methods that create Account records as part of their data setup. A new required field was added to the Account and now all of the unit tests fail.

What is the optimal way for a developer to fix the issue?

- A. Change the required field to be a validation rule that excludes the System Administrator profile.
- B. Add a before insert trigger on Account to set the value of the required field,
- C. Add the required field to the data setup for all of the unit tests.
- **D. Create a TestDataFactory class that serves as the single place to create Accounts for unit tests and set the required field there.**

Answer: D

Explanation:

The optimal way to fix the failing unit tests after adding a new required field to the Account object is to create a TestDataFactory class that serves as a centralized place to create Accounts for unit tests. This class would include the new required field, ensuring that all unit tests have the necessary data setup.

NEW QUESTION # 121

The head of recruiting at Universal Containers (UC) wants to provide all internal users the ability to search for open positions by role, department, and location via a new recruiting app. In addition to search, users of the app should be able to refer a friend, apply for a position, and review the status of their current submissions.

The app will be surfaced to UC's existing iOS and Android users via the standard mobile app that Salesforce provides. It has a custom user interface design and offline access is not required.

Given these requirements, what is the recommended approach to develop the app?

- A. Visualforce
- **B. Lightning Web Components**
- C. Lightning Experience Builder
- D. Salesforce SDK

Answer: B

NEW QUESTION # 122

Which two queries are selective SOQL queries and can be used for a large data set of 200,000 Account records?

Choose 2 answers

- **A. SELECT Id FROM Account WHERE Name IN (List of Names) AND Customer_Number_c= 'ValueA**
- **B. SELECT Id FROM Account WHERE Name != ''**
- C. SELECT Id FROM Account WHERE II IK (List of Account Ida)
- D. SELECT Id FROM Account WHERE Name LIKE '!-NULL

Answer: A,B

Explanation:

Selective queries in SOQL are optimized for performance. Query B is selective because it filters out empty names, which are likely to be less in number. Query C is selective if the list of names is small, and 'Customer_Number_c' is indexed or can be used as an external ID field. Working with Very Large SOQL Queries

NEW QUESTION # 123

Consider the following code snippet:

□ Which two steps should the developer take to add flexibility to change the endpoint and credentials without needing to modify code?

Choose 2 answers

- **A. Use req. setEndpoint ('callout:endFoint_NC'); within the callout request.**
- B. Use red. setEndpoint (Label.endPointURL) ;.
- C. Create a Named Credential, endPcint_wc, ta store the endpoint and credentials.
- **D. Store the URL of the endpoint in a custom Label named endpointuRL.**

Answer: A,D

NEW QUESTION # 124

A Salesforce org has more than 50,000 contacts. A new business process requires a calculation that aggregates data from all of these contact records. This calculation needs to run once a day after business hours.

which two steps should a developer take to accomplish this?

Choose 2 answers

A)

- B)
- C)
- D)

- A. Option D
- **B. Option C**
- C. Option A
- **D. Option B**

Answer: B,D

Explanation:

When dealing with large datasets and the need to perform complex calculations or data aggregation, batch Apex and scheduling are typically used to efficiently process records in batches and to execute the process during off-peak hours.

Option B is correct because using the `@future` annotation allows you to run methods in the background, but it is not suitable for operations that need to process more than 50,000 records, which is the governor limit for future methods.

Option C is correct because implementing the `Schedulable` interface allows you to schedule the class to run at specified times, such as after business hours, which is a requirement for this scenario.

Option A is incorrect because `Queueable` is typically used for chaining jobs and handling asynchronous processing of individual transactions, not for processing large datasets at scheduled times.

Option D is incorrect because the `Database.Batchable` interface is what's needed for processing large datasets, not `Database.Stateful`. The `Database.Stateful` interface is used to maintain state across batch job transactions.
