300-430 Passing Score - Exam 300-430 Topic

Our 300-430 exam question has been widely praised by all of our customers in many countries and our company has become the leader in this field. Our 300-430 exam questions boost varied functions and they include the self-learning and the self-assessment functions, the timing function and the function to stimulate the 300-430 Exam to make you learn efficiently and easily. There are many advantages of our 300-430 study tool. To understand the details of our 300-430 practice braindump, you can visit our website ValidExam.

Cisco Implementing Cisco Enterprise Wireless Networks Sample Questions (Q263-Q268):

NEW QUESTION # 263

A healthcare organization is using Cisco Catalyst Center integrated with Cisco Spaces to track the movement of medical devices in real time. The IT team notices that location accuracy is significantly reduced in areas where medical trolleys are frequently moved. A site survey revealed that with the trolley in the environment, an insufficient number of APs can detect the client device. The APs are deployed following standard ceiling-mounted guidelines. The IT team already ruled out interference from non-Wi-Fi devices and configured proper RF profiles. Which action must the IT team take to resolve the issue?

- A. Increase the transmit power of all APs in the hospital to compensate for signal interference.
- B. Lower APs in the affected areas to reduce obstructions and improve the signal path for accurate triangulation
- C. Enable spectrum analysis to detect non-Wi-Fi device interference and automatically adjust AP channels.
- D. Implement location-based FastLocate features on Cisco Spaces to bypass the need for signal triangulation.

Answer: B

NEW QUESTION # 264

A Cisco CMX 3375 appliance on the 10.6.1 version code counts duplicate client entries, which creates wrong location analytics. The issue is primarily from iOS clients with the private MAC address feature enabled.

Enabling this feature requires an upgrade of the Cisco CMX 3375 appliance in a high availability pair to version 10.6.3. SCP transfers the Cisco CMX image, but the upgrade script run fails. Which configuration change resolves this issue?

- A. Break the high availability using the `cmxha config disable` command and upgrade the primary and secondary individuality.
- B. Upgrade the high availability pair to version 10.6.2 image first and then upgrade to version 10.6.3.
- C. Save configuration and use the upgrade script to upgrade the high availability pair without breaking the high availability.
- D. Run root patch to first upgrade to version 10.6.2 and then migrate to version 10.6.3.

Answer: A

NEW QUESTION # 265

An IT department receives a report of a stolen laptop and has information on the MAC address of the laptop. Which two settings must be set on the wireless infrastructure to determine its location? (Choose two.)

- A. Tracking optimization must be enabled on the WL
- B. Location History for Visitors must be enabled on the MSE.
- C. Client location tracking must be enabled on the MSE.
- D. Location History for Rogue APs & Rogue Clients must be enabled on the MSE.
- E. Location History for Clients must be enabled on the MS

Answer: A,C

NEW QUESTION # 266

During the EAP process and specifically related to the client authentication session, which encrypted key is sent from the RADIUS server to the access point?

- A. shared-secret key
- B. session key
- C. WPA key
- D. encryption key

Answer: B

Explanation:

During the Extensible Authentication Protocol (EAP) process, the RADIUS server generates an encrypted session key after the client's identity is authenticated. This session key is sent to the access point to encrypt data frames between the client and the access point. It ensures that each session has a unique encryption key, enhancing security. References: Look for information on EAP and

NEW QUESTION # 267

An engineer is troubleshooting a Cisco CMX high-availability deployment and notices that the primary and backup Cisco CMX servers are both considered primary. Which command must the engineer run on the backup server?

- A. cmxha convert backup
- B. cmxha convert secondary
- C. cmxha secondary convert
- D. cmxha backup convert

Answer: A

Explanation:

The command `cmxha convert backup` is used on the backup Cisco CMX server to designate it as the secondary server in a high-availability deployment. This command helps to resolve the issue where both servers are considered primary. References: Cisco CMX high-availability documentation will provide more details on this command.

NEW QUESTION # 268
