156-836 Practice Test Pdf & 156-836 Latest Exam Forum

Everyone is not willing to fall behind, but very few people take the initiative to change their situation. Take time to make a change and you will surely do it. Our 156-836 actual test guide can give you some help. Our company aims to help ease the pressure on you to prepare for the exam and eventually get a certificate. Obtaining a certificate is equivalent to having a promising future and good professional development. Our 156-836 Study Materials have a good reputation in the international community and their quality is guaranteed. Why don't you there have a brave attempt? You will certainly benefit from your wise choice.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample

Questions (Q87-Q92):

NEW QUESTION # 87

What type of cluster can a Security Group can be compared to?

- A. VSLS
- B. Active / Standby
- C. Active / Backup
- D. Load Sharing Active / Active

Answer: D

Explanation:

A Security Group can be compared to a Load Sharing Active / Active cluster because it consists of multiple Security Group Members that share the traffic load and provide high availability and scalability. Each Security Group Member is an active firewall that processes traffic according to the Security Group policy and synchronizes its state with other members. The Maestro Orchestrator acts as a load balancer that distributes the traffic among the Security Group Members based on their capacity and availability.

NEW QUESTION # 88

In a Maestro Dual Site environment, what is the definition of the term Active Site.

- A. The Active Site is the site that is not handling any traffic for the specific SG, but its connections are synced to its SGMs from the MHOs to be ready in the event of a failover.
- B. The Active Site is the site where the SMO Master exists.
- C. There is no such thing as an active site. In a Dual Site environment, traffic is load balanced.
- D. The Active Site is the site currently handling the enforcement on traffic passing for a specific SG.Connections are synced within the SGMs in the Active Site.

Answer: D

Explanation:

In a Maestro Dual Site environment, there are two sites that can host Security Group Members (SGMs) for each Security Group (SG). The Active Site is the one that is currently processing the traffic for a specific SG, while the Standby Site is the one that is ready to take over in case of a failover. The Active Site and the Standby Site can be different for different SGs, depending on the load balancing and failover policies. The Active Site and the Standby Site are synchronized by the Maestro Orchestrators (MHOs) using the Site-Sync port and VLANs.

NEW QUESTION # 89

What happens if you apply a hotfix using gClish?

- A. If you apply a hotfix using gclish, each SG members installs the hotfix and reboots after waiting it's turn to do so.
- B. Logical groups "A" and "B" are created. Members of group "A" install and reboot first. Then members of group "B" does the same once reboots have finished with group "A."
- C. If you apply a hotfix using gclish, the operation will fail because an outage would occur.
- D. If you apply a hotfix using gclish, it causes an outage for the entire SG as all members reboot at roughly the same time.

Answer: A

Explanation:

According to the Installing and Uninstalling a Hotfix on Quantum Maestro Orchestrators, page 1, when you apply a hotfix using

gclish, the MHO distributes the hotfix to all SGMs in the SecurityGroup. The SGMs install the hotfix and reboot one by one, in ascending order of their SGM IDs. The SGMs wait for the previous SGM to finish rebooting before starting their own reboot. This ensures that there is no outage for the entire Security Group.

NEW QUESTION # 90

In what mode do MHOs process traffic?

- A. MHOs process traffic in Active-Standby mode
- B. MHOs process traffic in Active-Active mode
- C. MHOs process traffic in load sharing mode
- D. MHOs process traffic in VSLS mode

Answer: B

Explanation:
Explanation
MHOs process traffic in Active-Active mode, which means that both MHOs are active and share the load of the traffic that is sent to and from the SGMs. Active-Active mode provides better performance and scalability than Active-Standby mode, which only uses one MHO at a time and keeps the other as a backup.
Active-Active mode also allows for faster failover and recovery in case of an MHO failure, as the surviving MHO can take over the traffic without interruption.
