EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34

Question:

What is a key challenge in managing the variety aspects of Big Data?

- A. Storing transaction-based data over the years
- **B. Combining data from various sources and formats cost-effectively**
- C. Generating real-time data
- D. Reducing data volume to manageable sizes

Answer: B

Explanation:

Big Data's "variety" refers to the challenge of integrating different data types (structured, semi-structured, unstructured) from various sources.

The key challenge is to combine and manage this data cost-effectively, ensuring analytics systems can process it seamlessly.

* Generating real-time data is about velocity, not variety.

* Storing data over years is about volume.

* Reducing volume is more about data management, not variety.

NEW QUESTION # 35

Question:

What is true about the FCIP?

- **A. Connects local FC SANs to remote FC SANs**
- B. Connects local iSCSI SANs to remote iSCSI SANs
- C. Connects local iSCSI SANs to remote FC SANs
- D. Connects local FC or iSCSI SANs to remote FC or iSCSI SANs

Answer: A

Explanation:

FCIP (Fibre Channel over IP) is used to tunnel Fibre Channel traffic over IP networks. Its primary use case:

* Connecting local FC SANs to remote FC SANs for disaster recovery and remote data replication.

* It encapsulates FC frames into IP packets, transporting them over existing IP infrastructure.

* Option B/C/D: iSCSI is not directly involved in FCIP's primary function.

NEW QUESTION # 36

Question:

What is the first step in a machine learning process?

- A. Selecting the type of learning
- **B. Collecting the datasets**
- C. Analyzing the data
- D. Training the model

Answer: B

Explanation:

Collecting the datasets is the first step in any machine learning (ML) process. Without data, the ML system cannot function. Steps include:

1##Collecting datasets: Gathering data relevant to the problem to train and validate the ML model.

2##Analyzing data: Cleaning and exploring data for patterns.

3##Selecting learning type: Deciding between supervised, unsupervised, or reinforcement learning.

4##Training the model: Using the data to build predictive models.

NEW QUESTION # 37

Question:

Which activity is performed in the fifth stage of penetration testing?

- **A. Checking the compromised system or network**
- B. Determining if persistence access can be maintained
- C. Collecting the evidence of the exploited vulnerabilities
- D. Determining the risk levels by exploited vulnerabilities

Answer: A

Explanation:

The fifth stage of penetration testing is known as post-exploitation or analysis of the compromised environment. It involves:

- * Checking the compromised system/network to determine the scope of access.
- * Identifying potential for further exploitation.
- * Gathering information about the environment.
- * Option A relates to the risk assessment phase.
- * Option B is typically done in post-exploitation but isn't the main step.
- * Option D (collecting evidence) is more related to reporting/documentation at the end.

NEW QUESTION # 38

Question:

What is an advantage of deploying intelligent storage systems in the data center?

- A. Reduces the amount of data to replicate, migrate, and back up
- **B. Enables efficient and optimized storage and management of information**
- C. Reduces the complexity of managing information by creating silos of storage
- D. Migrates data from a data center to the cloud at no cost

Answer: B

Explanation:

Intelligent storage systems incorporate advanced features like automated tiering, deduplication, and compression. These features enable efficient storage utilization and optimized management by automating data placement and reducing manual intervention.

- * Option A: While intelligent systems may facilitate cloud integration, they do not guarantee cost-free migration.
- * Option B: Data reduction features help, but the primary advantage is broader efficiency and optimization.
- * Option C: Creating silos increases complexity; intelligent systems aim to unify and simplify storage management.
