Cisco Implementing Cisco SD-WAN Solutions Sample Questions (Q154-Q159):

NEW QUESTION # 154

Which policy configures an application-aware routing policy under Configuration > Policies?

- A. Control policy
- B. Data policy
- C. Localized policy
- **D. Centralized policy**

Answer: D

NEW QUESTION # 155

Which two different states of a WAN Edge certificate are shown on vManage? (Choose two.)

- A. active
- **B. staging**
- C. inactive
- **D. invalid**
- E. provisioned

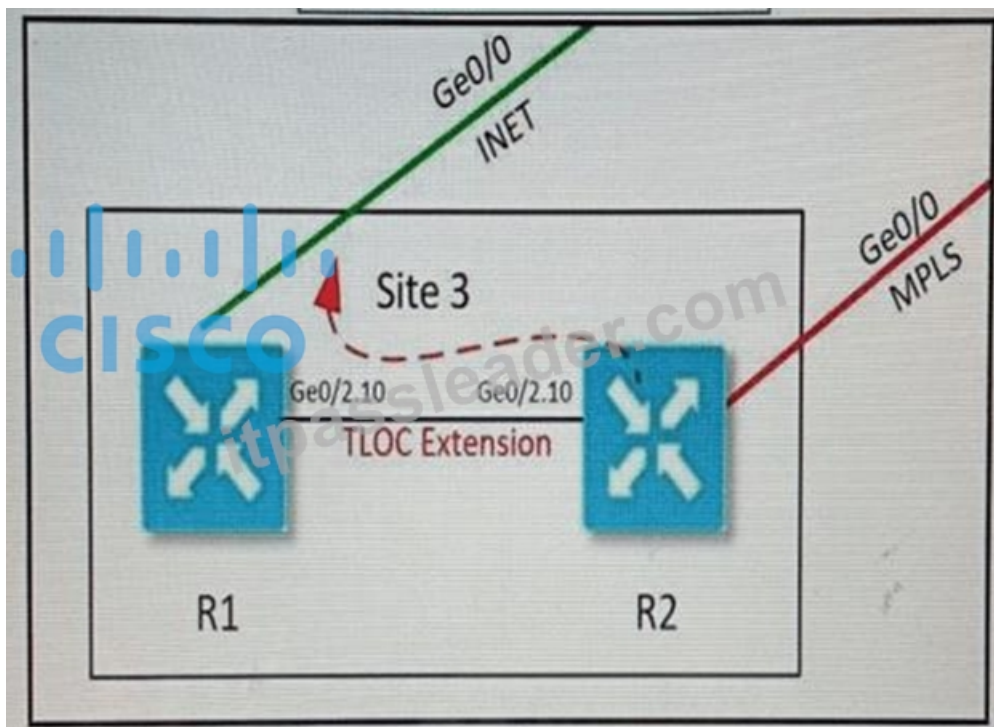

Answer: B,D

Explanation:

There are three different states of a WAN Edge certificate:

- Valid (shown in green): The certificate is valid and the WAN Edge router can fully participate and forward traffic in the SD-WAN overlay network.
- Staging (shown in yellow): The certificate is in staging state and the WAN Edge router can form control connections with the controllers, but it cannot join the overlay and forward traffic until it is in a valid state. More specifically, each WAN Edge router becomes an OMP peer with the vSmart controllers, but no OMP routes will be sent nor will any local routes be redistributed into OMP.
- Invalid (shown in red): The certificate is not valid and the WAN Edge router will be barred from forming control connections.
