The client can decide which version of our Google-Workspace-Administrator exam questions to choose according to their hobbies and their practical conditions.

Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q45-Q50):

NEW QUESTION # 45

Your company is using Google Workspace Enterprise Standard. They have 200 meeting rooms defined for the main building and used daily by the 12,000 employees. Users are complaining they have difficulties finding a room available when searching within Google Calendar, even if several rooms are available (no one attending meetings in these rooms at that time). You have been asked to find a solution while minimizing the operational effort and avoiding any new expenses due to budget constraints. What should you do?

- A. Implement a third-party solution that will detect presence in the room and release it if nobody appears after a few minutes.
- **B. Set the option "Allow calendar-based room release" for all targeted rooms.**
- C. Upgrade to Google Workspace Enterprise Plus edition to benefit from additional features for automated machine learning (ML) based resources management.
- D. Create a Google App Script that will inspect each room calendar for the next 12 hours, check attendees status, and send the room administrator an alert email for releasing the room if all attendees have declined but the room has not.

Answer: B

NEW QUESTION # 46

Your organization collects credit card information in customer files. You need to implement a policy for your organization's Google Drive data that prevents the accidental sharing of files that contain credit card numbers with external users. You also need to record any sharing incidents for reporting. What should you do?

- A. Configure a data retention policy to automatically delete files containing credit card numbers after a specified period.
- **B. Create a data loss prevention (DLP) rule that uses the predefined credit card number detector, sets the action to "block external sharing", and enables the "Log event" option.**
- C. Implement a third-party data loss prevention solution to integrate with Drive and provide advanced content detection capabilities.
- D. Enable Gmail content compliance, and create a rule to block email attachments containing credit card numbers from being sent to external recipients.

Answer: B

Explanation:

A data loss prevention (DLP) rule with the predefined credit card number detector will help you identify and prevent the accidental sharing of files that contain sensitive credit card information. Setting the action to "block external sharing" ensures that such files cannot be shared externally. Enabling the "Log event" option will record any incidents of external sharing for auditing and reporting purposes, fulfilling both the security and reporting requirements.

NEW QUESTION # 47

Your company is using Google Workspace Business Plus edition, and the security team has reported several unsuccessful attempts to sign in to your Google Workspace domain from countries where you have no local employees. The affected accounts are from several executives in the main office.

You are asked to take measures to mitigate this security risk. Although budget is not a concern, your company prefers a minimal financial outlay to fix the issue, which you are tasked with managing. Which two solutions would help you mitigate the risk at minimal cost?

Choose 2 answers

- A. For all executives, create new accounts with random characters to match Google best practices, migrate data from the former accounts, and then delete them.
- B. Upgrade to Google Workspace Enterprise Plus for all accounts, and define Context-Aware Access levels to only a list of countries where the company has employees.
- **C. Deploy 2-Step Verification for all users who have security keys.**
- **D. Subscribe to Cloud Identity Premium for all accounts, and define Context-Aware Access levels to only a list of countries where the company has employees.**
- E. Deploy Google Cloud Armor on a dedicated project, and create a rule to allow access to Google Workspace only from specific locations.

Answer: C,D

Explanation:

To mitigate the security risk of unauthorized sign-in attempts from countries without local employees, two effective and cost-efficient solutions are:

A. Deploy 2-Step Verification for all users who have security keys. This enhances account security by requiring an additional verification step, reducing the risk of unauthorized access.

D. Subscribe to Cloud Identity Premium for all accounts and define Context-Aware Access levels to allow access only from specific countries where the company has employees. This adds an additional layer of security by controlling access based on geographic location.

These solutions are effective in enhancing security while minimizing financial outlay compared to other options like upgrading to Enterprise Plus.

NEW QUESTION # 48

You received this email from the head of marketing:

Hello Workspace Admin:

Next week, a new consultant will be starting on the "massive marketing mailing" project. We want to ensure that they can view contact details of the rest of the marketing team, but they should not have access to view contact details of anyone else here at our company. Is this something that you can help with?

What are two of the steps you need to perform to fulfill this request? (Choose two.)

- A. Create the consultant inside under the marketing OU.
- B. Ensure that you have the Administrator Privilege of Services > Services settings and that Services > Contacts > Contacts Settings Message is set.
- C. Create an isolated OU for the consultants who need the restricted contacts access.
- D. Create a group that includes the contacts that the consultant is allowed to view.
- E. Apply the role of owner to the consultant in the group settings.

Answer: C,D

NEW QUESTION # 49

Your organization has hired temporary employees to work on a sensitive internal project. You need to ensure that the sensitive project data in Google Drive is limited to only internal domain sharing. You do not want to be overly restrictive. What should you do?

- A. Restrict the Drive sharing options for the domain to allowlisted domains.
- B. Create a Drive DLP rule, and use the sensitive internal Project name as the detector.
- C. Turn off the Drive sharing setting from the Team dashboard.
- D. Configure the Drive sharing options for the domain to internal only.

Answer: D

Explanation:

By configuring the Drive sharing options for your domain to "internal only," you ensure that sensitive project data is restricted to your organization's internal users. This prevents any external sharing while allowing your team members to collaborate freely within the organization. It strikes the right balance between maintaining security and avoiding unnecessary restrictions on collaboration.

NEW QUESTION # 50
