NEW QUESTION # 90

Refer to the exhibit. The FGT-Edge device is a VPN gateway that allows remote administrators access to the local ICS network. Management hires a third-party company to conduct health and safety on site. The third-party company must have outbound access to external resources.

What is the best scenario to provide external access to the third-party company while continuing to secure the ICS networks?

Network topology

- A. Configure outbound security policies with limited active authentication users of the third-party company.
- B. Implement an additional firewall using an additional upstream link to the internet.
- C. Create VPN tunnels between downstream FortiGate devices and the edge FortiGate to protect ICS network traffic.
- D. Split the edge FortiGate device into multiple logical devices to allocate an independent VDOM for the third-party company.

Answer: D

Explanation:

By splitting the edge FortiGate into VDOMs, you isolate the third-party company in its own virtual firewall. That VDOM can have outbound internet policies without exposing or risking the ICS networks protected by the other VDOMs.
