P.S. Kostenlose 2026 Google Generative-AI-Leader Prüfungsfragen sind auf Google Drive freigegeben von ZertPruefung verfügbar: <https://drive.google.com/open?id=1PyiAirybgMO1FQqZ-E7VpwhZ3LY07t7z>

In dieser dynamischen Welt lohnt sich, etwas für berufliche Weiterentwicklung zu tun. Angesichts des Fachkräftemangels in vielen Branchen haben Sie mit einer Google Generative-AI-Leader (Google Cloud Certified - Generative AI Leader Exam) Zertifizierung mehr Kontrolle über Ihren eigenen Werdegang und damit bessere Aufstiegschancen.

Google Generative-AI-Leader Prüfungsplan:

Thema	Einzelheiten
Thema 1	Business Strategies for a Successful Generative AI Solution: This section of the exam measures the skills of Cloud Architects and evaluates the ability to design, implement, and manage enterprise-level generative AI solutions. It covers the decision-making process for selecting the right solution, integrating AI into an organization, and measuring business impact. A strong emphasis is placed on secure AI practices, highlighting Google's Secure AI Framework and cloud security tools, as well as the importance of responsible AI, including fairness, transparency, privacy, and accountability.
Thema 2	Techniques to Improve Generative AI Model Output: This section of the exam measures the skills of AI Engineers and focuses on improving model reliability and performance. It introduces best practices to address common foundation model limitations such as bias, hallucinations, and data dependency, using methods like retrieval-augmented generation, prompt engineering, and human-in-the-loop systems. Candidates are also tested on different prompting techniques, grounding approaches, and the ability to configure model settings such as temperature and token count to optimize results.
Thema 3	Google Cloud's Generative AI Offerings: This section of the exam measures the skills of Cloud Architects and highlights Google Cloud's strengths in generative AI. It emphasizes Google's AI-first approach, enterprise-ready platform, and open ecosystem. Candidates will learn about Google's AI infrastructure, including TPUs, GPUs, and data centers, and how the platform provides secure, scalable, and privacy-conscious solutions. The section also explores prebuilt AI tools such as Gemini, Workspace integrations, and Agentspace, while demonstrating how these offerings enhance customer experience and empower developers to build with Vertex AI, RAG capabilities, and agent tooling.
Thema 4	Fundamentals of Generative AI: This section of the exam measures the skills of AI Engineers and focuses on the foundational concepts of generative AI. It covers the basics of artificial intelligence, natural language processing, machine learning approaches, and the role of foundation models. Candidates are expected to understand the machine learning lifecycle, data quality, and the use of structured and unstructured data. The section also evaluates knowledge of business use cases such as text, image, code, and video generation, along with the ability to identify when and how to select the right model for specific organizational needs.

Generative-AI-Leader Studienmaterialien: Google Cloud Certified - Generative AI Leader Exam & Generative-AI-Leader Zertifizierungstraining

ZertPruefung ist eine Website, die IT-Fachleuten Informationsressourcen zur Google Generative-AI-Leader IT-Zertifizierungsprüfung bietet. Die Feedbacks von vielen Kunden haben sich bewiesen, dass ZertPruefung die beste Website in Bezug auf die Prüfungsvorbereitung ist. Die Produkte von ZertPruefung sind zuverlässige Prüfungsunterlagen. Die Google Generative-AI-Leader Prüfungsfragen und Antworten von ZertPruefung sind sehr genau. Unsere erfahrungsreichen IT-Fachleute verbessern immer noch die Qualität unserer Google Generative-AI-Leader Schulungsunterlagen.

Google Cloud Certified - Generative AI Leader Exam Generative-AI-Leader Prüfungsfragen mit Lösungen (Q29-Q34):

29. Frage

A software development team wants to use generative AI (gen AI) to code faster so they can launch their software prototype quicker. What should the team do?

- A. Use gen AI to identify potential bugs and security vulnerabilities in their code.
- B. Use gen AI to refactor and optimize existing code.
- **C. Use gen AI to suggest code snippets and complete functions.**
- D. Use gen AI to automatically generate comprehensive documentation for their code.

Antwort: C

Begründung:

While generative AI can assist with all the options listed (refactoring, documentation, bug identification), its most direct and significant impact on coding faster for a prototype is through code generation. Suggesting code snippets and completing functions directly accelerates the writing of new code, enabling quicker prototyping.

30. Frage

What is a characteristic of Google Cloud as a generative AI company?

- A. Google Cloud relies on proprietary, closed-source AI technologies for maximum security benefits.
- B. Google Cloud ensures that all generative AI models and data are completely secured and isolated from external networks.
- C. Google Cloud provides fully autonomous AI agents that require zero configuration or management overhead.
- **D. Google Cloud has an AI-first focus that enables innovation, with continuous updates and broad integration across its platform.**

Antwort: D

Begründung:

Google Cloud emphasizes an AI-first approach, integrating AI capabilities across its services and consistently innovating with new models and features. While security is a high priority, fully autonomous AI agents requiring zero configuration are generally not the norm, and "completely secured and isolated from external networks" is an oversimplification of cloud security models. Google also contributes to and supports open-source AI initiatives, not solely relying on proprietary closed-source technologies.

31. Frage

A company is defining their generative AI strategy. They want to follow Google-recommended practices to increase their chances of success. Which strategy should they use?

- A. Multi-directional strategy
- B. Rapid implementation strategy
- C. Bottom-up strategy
- **D. Top-down strategy**

Antwort: D

Begründung:

Google Cloud often recommends a "top-down" approach for generative AI strategy. This means starting with clear business objectives and leadership alignment on how generative AI can solve critical business problems, rather than simply experimenting from the bottom up without a clear strategic direction.

32. Frage

An organization is collecting data to train a generative AI model for customer service. They want to ensure security throughout the ML lifecycle. What is a critical consideration at this stage?

- A. Monitoring the AI model's performance for unexpected outputs and potential errors.
- **B. Implementing access controls and protecting sensitive information within the training data.**
- C. Applying the latest software patches to the AI model on a regular basis.
- D. Establishing ethical guidelines for AI model responses to ensure fairness and avoid harm.

Antwort: B

Begründung:

The stage mentioned is Data Collection/Training Data Preparation. In the machine learning lifecycle, this initial stage is where raw data is ingested and processed. If the model is being trained for customer service, the data (e.g., customer transcripts) is highly likely to contain sensitive information (like Personally Identifiable Information or PII).

Therefore, the most critical security and privacy consideration at this stage is protecting the integrity and confidentiality of the data itself.

Implementing strong access controls and protecting sensitive information (A) is the essential first step in a secure AI pipeline, aligning with Google's Secure AI Framework (SAIF). If data access is not controlled and sensitive data is not de-identified or redacted before it is used for training, the resulting model could leak that sensitive information to users.

Options B, C, and D are all important controls, but they occur at later stages of the ML lifecycle:

B (Software patches/latest versions) is part of deployment and management.

C (Ethical guidelines/fairness) is a Responsible AI goal implemented via guardrails and testing (later stages).

D (Monitoring) is an MLOps step that happens after deployment.

The critical consideration at the data collection stage is ensuring the data's security and privacy before it influences the model.

(Reference: Google Cloud guidance on securing generative AI emphasizes that one of the most significant risks is data leakage, making safeguarding training data and implementing identity and access control the foundational steps in the data ingestion and preparation phases.)

33. Frage

A company wants to use generative AI to create a chatbot that can answer customer questions about their products and services. They need to ensure that the chatbot only uses information from the company's official documentation. What should the company do?

- A. Adjust the temperature parameter.
- B. Use prompt chaining.
- C. Use role prompting.
- **D. Use grounding.**

Antwort: D

Begründung:

The core requirement is to guarantee that the chatbot only uses information from the company's official documentation and does not rely on its general knowledge base. This is crucial for ensuring factual accuracy, relevance to the company's specific products, and preventing the generation of fabricated or incorrect information (hallucinations).

The specific technique designed to address this challenge is Grounding. Grounding is the process of connecting the Large Language Model's (LLM's) responses to a trusted, verifiable source of information, such as an organization's internal documents, databases, or live data feeds. When an LLM is grounded, it is forced to base its answers only on the provided context, effectively preventing it from drawing on its broad, generalized training data. Grounding is often implemented using a method called Retrieval-Augmented Generation (RAG), particularly with tools like Google Cloud's Vertex AI Search, which indexes the official documentation and feeds the relevant snippets to the model.

Options A, B, and C address different aspects of model output: Role prompting sets the model's persona, adjusting temperature controls creativity, and prompt chaining manages conversation history, but none of these techniques restrict the model's source of truth to the official documentation. Therefore, Grounding is the correct and most effective technique for this requirement.

34. Frage

.....

Sind Sie IT-Fachmann? Wollen Sie Erfolg? Dann kaufen Sie die Schulungsunterlagen zur Google Generative-AI-Leader Zertifizierungsprüfung von ZertPruefung. Sie werden von der Praxis prüft. Sie werden Ihnen helfen, die Google Generative-AI-Leader Zertifizierungsprüfung zu bestehen. Ihre Berufsaussichten werden sich sicher verbessern. Sie werden ein hohes Gehalt beziehen. Sie können eine Karriere in der internationalen Gesellschaft machen. Wenn Sie spitze technischen Fähigkeiten haben, sollen Sie sich keine Sorgen machen. Die Schulungsunterlagen zur Google Generative-AI-Leader Zertifizierungsprüfung von ZertPruefung werden Ihren Traum verwirklichen. Wir werden mit Ihnen durch dick und dünn gehen und die Herausforderung mit Ihnen zusammen nehmen.
