XYZ Company ships products globally. A warehouse in each country ships to customers in that country.

When supplies are short, XYZ's constrained plan invokes an upgrade policy wherein they ship a higher value product instead of the customer's originally requested item. Although costly for XYZ, this upgrade helps maintain high customer satisfaction and on-time delivery. However, because of local preferences for some new products, this global upgrade policy no longer applies.

What is the solution?

- A. XYZ should keep the "end-item substitution" Decision Rule enabled and then just undo the substitutions where inappropriate.
- **B. XYZ should create local substitution rules in Product Information Management.**
- C. XYZ should disable the "end-item substitution" Decision Rule and then handle substitutions manually.
- D. XYZ should enable the "local end-item substitution" Decision Rule.

Answer: B

Explanation:

To manage the changing customer preferences for local products, creating specific substitution rules in Product Information Management (PIM) allows XYZ to customize substitutions at the local level rather than relying on a global substitution policy. This flexibility enables the company to align its policies with regional preferences, enhancing customer satisfaction while controlling costs
