Salesforce Certified Platform Development Lifecycle and Deployment Architect Sample Questions (Q167-Q172):

NEW QUESTION # 167

Universal Containers has many backlog items and competing stakeholders who cannot agree on priority. What should an architect do to overcome this?

- A. Organize a sprint planning meeting with the Scrum team
- B. **Facilitate the design of a prioritization model with the stakeholders.**
- C. Take over prioritization for the stakeholders.
- D. Allow the delivery teams to pick the best work for the business.

Answer: B

NEW QUESTION # 168

Universal Containers has just initiated a project involving a large distributed development and testing team. The development team members need access to a tool to manage requirements and the testing team needs access to a tool to manage defects. Additionally, stakeholders are requesting ad-hoc status reports. What tool should an Architect recommend to support the project?

- A. Wave
- B. Port management tool
- C. Spreadsheets
- D. Code Repository

Answer: B

NEW QUESTION # 169

Universal Containers has automated its deployment process using Metadata API. However, they found that Metadata API doesn't support all the components yet. What should be done to address this?

- A. Deploy unsupported components manually before/after deployment.
- B. Use the force.com IDE for deploying the unsupported components.
- C. Use AppExchange products to deploy unsupported components.
- D. Use change sets for deploying all the unsupported components.

Answer: A

NEW QUESTION # 170

In architect is working on a project that relies on functionality that cannot be deployed via the Metadata API. What is the best practice for making sure these components are deployed successfully?

- A. Document deployment steps for any components that cannot be automatically deployed
- B. Generate and install a managed package that enables the required settings
- C. Utilize the metadata API's deployAllComponents call
- D. Generate and deploy a change set that enables the required settings

Answer: A

NEW QUESTION # 171

Universal Containers (UC) is considering implementing a minor change policy for a series of low-risk user stories that are commonly received by the UC admins. The policy would allow admins to make these changes directly in production. UC does not have continuous integration/continuous delivery (CI/CD) in place.

Which three best practices should the architect suggest UC follow for their new change policy? Choose 3 answers

- A. CI/CD is required to successfully manage minor changes.
- B. Minor changes should be thoroughly documented and follow some type of standard cadence.
- C. All changes should still be tested.
- D. Minor changes do not need to be documented and can be made at any time.
- E. Downstream environments will not be automatically updated when production changes.

Answer: C,D,E

NEW QUESTION # 172

.....
