

NCP-DB Pass-Sure Braindumps: Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 & NCP-DB Exam Guide

What's more, part of that ActualCollection NCP-DB dumps now are free: <https://drive.google.com/open?id=1o8IO1BWIOxnOGCDBmPaz5jQwQu7G50pU>

The NCP-DB certificate stands out among the numerous certificates because its practicability and role to improve the clients' stocks of knowledge and practical ability. Owning a test NCP-DB certificate equals owning a weighty calling card when the clients find jobs and the proof that the clients are the competent people. Our NCP-DB Quiz prep is the great option for the clients to prepare for the test. Our NCP-DB study materials boost high passing rate and hit rate. Our clients praise them highly after they use them and recognize them as the key tool to pass the NCP-DB certification.

Nutanix NCP-DB Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Operate and Maintain an NDB Environment: Application of procedural concepts to register database server, provision databases, and test and publish database patches. Additionally, the topic explains the right method to apply Linux OS patches. Lastly, it delves into databases and troubleshooting of NDB operations.
Topic 2	<ul style="list-style-type: none">Protect NDB-managed Databases Using Time Machine: SLA retention policies, source databases, clones, protection of databases, and Data Access Management (DAM) policies are discussed in this topic.
Topic 3	<ul style="list-style-type: none">Describe NDB Concepts: It defines database and NDB terminology. The topic also explains benefits and features of NDB.
Topic 4	<ul style="list-style-type: none">Deploy and Configure an NDB Solution: This topic discusses how to deploy, configure, and NDB Instance.
Topic 5	<ul style="list-style-type: none">Monitor Alerts and Storage Usage Within an NDB Implementation: It is all about monitoring alerts and management of storage usage.

NCP-DB training study torrent & NCP-DB guaranteed valid questions & NCP-DB exam test simulator

Our evaluation system for NCP-DB test material is smart and very powerful. First of all, our researchers have made great efforts to ensure that the data scoring system of our NCP-DB test questions can stand the test of practicality. Once you have completed your study tasks and submitted your training results, the evaluation system will begin to quickly and accurately perform statistical assessments of your marks on the NCP-DB Exam Torrent so that you can arrange the learning tasks properly and focus on the targeted learning tasks with NCP-DB test questions.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Sample Questions (Q45-Q50):

NEW QUESTION # 45

An administrator has created a new SQL Server software profile version to apply the latest cumulative update. What should the administrator do to make it available to all users?

- A. Select the software profile version with the update and optimization,
- B. Deprecate the existing software profile version and use the new one.
- C. Update the software profile version and set the status to Published.
- D. Set the status of the existing software profile version to Unpublished.

Answer: C

Explanation:

When an administrator creates a new SQL Server software profile version to apply the latest cumulative update, they should update the software profile version and set the status to Published¹. This makes the new profile version available to all users. NDB will show available updates for any database server using the software profile as soon as the new profile version is published¹.

NEW QUESTION # 46

What is used to temporarily store the transaction logs of the source database before they are copied to the log?

- A. NDB Drive
- B. Time Machine
- C. Database Agent
- D. NDB Profiles

Answer: C

Explanation:

The Database Agent is used to temporarily store the transaction logs of the source database before they are copied to the log. This is a critical component for ensuring data consistency and recovery in database operations. References: Nutanix Database Automation documentation, focusing on database agents and their roles in transaction log management.

NEW QUESTION # 47

An administrator needs the ability to clone a source database to a point in time.

What is the lowest log frequency in minutes that can be configured in the Era IJI for log catchup operation?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

The log frequency in the Era IJI for log catchup operation can be configured to as low as 5 minutes. This allows the system to capture changes to the database at a high frequency, enabling more precise point-in-time recovery options. However, it's important to note that a higher frequency of log catchup operations can lead to increased system load. Therefore, the optimal frequency may

vary depending on the specific requirements and capabilities of your system^{1,2}. Please refer to the Nutanix Database Automation (NCP-DB) Learning documents for more detailed information.

NEW QUESTION # 48

What is the purpose of Data Access Management policies in NDB Multi-Cluster?

- A. To perform snapshot operations on a single Nutanix cluster
- B. To register multiple Nutanix clusters in NDB
- C. To remove data accessibility of a time machine across all registered Nutanix clusters in NDB
- **D. To manage time machine data availability across all registered Nutanix clusters in NDB**

Answer: D

Explanation:

Data Access Management (DAM) policies are a feature of NDB Multi-Cluster that allows you to control the access and availability of time machine data across different Nutanix clusters. You can use DAM policies to specify which clusters can access the time machine data of a source database, and which clusters can replicate the time machine data for backup or disaster recovery purposes. DAM policies help you to optimize the storage and network resources, as well as ensure the security and compliance of your database workloads. The purpose of DAM policies is not to register multiple Nutanix clusters in NDB, as this is done by using the Add Cluster option in the NDB settings page. The purpose of DAM policies is also not to perform snapshot operations on a single Nutanix cluster, as this is done by using the Time Machine feature in the NDB dashboard. The purpose of DAM policies is also not to remove data accessibility of a time machine across all registered Nutanix clusters in NDB, as this is done by using the Delete option in the Time Machine page. References:

* Nutanix Certified Professional - Database Automation (NCP-DB) 5 Exam, Section 6: Administer an NDB Environment, Objective 6.5: Apply procedural concepts to create Data Access Management (DAM) policies

NEW QUESTION # 49

An administrator is adding a stretched VLAN in NDB.
Which VLAN type(s) will satisfy this task?

- A. Only static VLANs that are managed in NDB
- **B. Both static and dynamic VLANs**
- C. Only VLANs that are not managed in NDB
- D. Only dynamic VLANs

Answer: B

Explanation:

The administrator can add a stretched VLAN in NDB using either static or dynamic VLANs. A stretched VLAN is a VLAN that spans across multiple Nutanix clusters, and allows the NDB-managed databases to communicate and migrate between different clusters. A static VLAN is a VLAN that is manually configured and assigned to the database server VMs and the databases by the administrator. A dynamic VLAN is a VLAN that is automatically configured and assigned to the database server VMs and the databases by the NDB instance, using the Nutanix Calm orchestration service. Both static and dynamic VLANs can be used to create a stretched VLAN in NDB, as long as they have the same VLAN ID and network configuration across the clusters. The administrator cannot add a stretched VLAN in NDB using only VLANs that are not managed in NDB. A VLAN that is not managed in NDB is a VLAN that is configured and assigned to the database server VMs and the databases outside of the NDB instance, using the Nutanix Prism web console or other tools. A VLAN that is not managed in NDB cannot be used to create a stretched VLAN in NDB, as it is not recognized or controlled by the NDB instance.
