## CompTIA A+ Core 1 Exam (2026) Sample Questions (Q343-Q348):

### NEW QUESTION # 343

A user keeps getting an error message when trying to print a letter. The printer is normally used to print cards and invitations. The user tries printing from a different computer, but the issue persists. Which of the following should the user do to resolve the issue?

- A. Change the paper tray setting.
- B. Print fewer pages.
- C. Replace the rollers.
- D. Print on card stock

**Answer: A**

Explanation:

If a printer is set to use a special tray (for cards/invitations) but a different type of print job is attempted (like a letter), a paper tray setting mismatch can cause errors. Changing the tray setting to match the print media resolves the issue.

From CompTIA A+ 220-1101 Official Study Guide, Objective 4.3 - Troubleshooting printers:

"If print jobs fail when media type changes, verify and adjust the paper tray settings to match the required output." Verified Source: CompTIA A+ Core 1 (220-1101) Official Study Guide, Chapter 4: Printer Troubleshooting CompTIA Exam Objectives 220-1101, Domain 4.3

### NEW QUESTION # 344

A technician is diagnosing several device issues reported by employees.

INSTRUCTIONS

Click on each device to review the issue. Then select the appropriate issue and solution from the drop-down menu. Each option may be used more than once.

The image shows a diagnostic interface with the following components:

- Three laptops at the top, each with a terminal window showing error messages and two dropdown menus labeled "Select an issue" and "Select a solution".
- A smartphone on the left and another on the right, each with two dropdown menus labeled "Select an issue" and "Select a solution".
- A tablet in the middle-left with two dropdown menus labeled "Select an issue" and "Select a solution".
- A monitor displaying "Monitor no signal" with two dropdown menus labeled "Select an issue" and "Select a solution".
- A monitor displaying a landscape image with two dropdown menus labeled "Select an issue" and "Select a solution".
- A monitor displaying a system boot screen with two dropdown menus labeled "Select an issue" and "Select a solution".
- A monitor displaying a cursor with two dropdown menus labeled "Select an issue" and "Select a solution".

At the bottom center, the "CompTIA" logo is displayed in red.

### NEW QUESTION # 345

Two workstations are connected to a LAN that does not have internet access. A user reports that they are unable to access a network service after a power outage. The web page warns the user that the site is insecure. Which of the following will most likely resolve the certificate error? (Choose two.)

- A. Renewing the SSL certificate
- B. Setting the system date and time in the BIOS
- C. Replacing the CMOS battery
- D. Scanning the LAN for unauthorized devices
- E. Opening the HTTPS port on the workstation's firewall
- F. Adjusting the browser security settings

**Answer: B,C**

**Explanation:**

After a power outage, an incorrect system date and time can cause SSL certificates to appear invalid because certificate validity depends on accurate time settings. Setting the correct system date and time in the BIOS resolves the validation issue. Replacing a depleted CMOS battery ensures the system retains correct date and time settings after power loss, preventing recurring certificate errors.

### NEW QUESTION # 346

A technician replaced a failed PSU on a high-end workstation PC. Now, the PC fails to POST and does not stay turned on for more than five seconds. Which of the following power connections was most likely forgotten during installation?

- A. 5V
- B. 120V

- C. 12V
- D. 220V

**Answer: C**

Explanation:

The issue described suggests the 12V CPU power connector was likely forgotten during installation. The 12V power rail is essential for the operation of high-end workstation components, including the CPU. Without the 12V connection, the system will fail to POST and may power off shortly after being turned on.

Why 12V?

The 12V connector is critical for providing power to the CPU via the motherboard. Modern CPUs require a dedicated power source from the PSU, usually supplied through the 4-pin or 8-pin EPS12V connector.

If this connection is omitted, the motherboard will not receive adequate power for the CPU to function, resulting in the system failing to POST or shutting down after a brief period.

#### NEW QUESTION # 347

A company needs to develop a disaster recovery solution based on virtual machines. Which of the following service models is the most suitable?

- A. Infrastructure as a Service
- B. Platform as a Service
- C. Security as a Service
- D. Software as a Service

**Answer: A**

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Infrastructure as a Service (IaaS) provides virtualized computing resources over the internet such as servers, storage, and networking. It allows a business to quickly spin up virtual machines and is ideal for disaster recovery and scalable IT infrastructure needs.

\* Option B: SecaaS focuses on cloud-delivered security, not infrastructure.

\* Option C: PaaS offers development environments, not full virtual infrastructure.

\* Option D: SaaS delivers applications over the internet (e.g., email, CRM) - not for disaster recovery.

CompTIA A+ Core 1 Exam Objective Reference:

\* Objective 4.1: Compare and contrast cloud computing concepts.
