Efficient Valid Drupal-Site-Builder Test Book & Leading Provider in Qualification Exams & Free Download Drupal-Site-Builder Valid Test Brainsdumps

The authority of IteXamguide in Acquia Drupal-Site-Builder exam questions rests on its being high-quality and prepared according to the latest pattern. IteXamguide is proud to announce that our Acquia Drupal-Site-Builder Exam Dumps help the desiring candidates of Acquia Drupal-Site-Builder certification to climb the ladder of success by grabbing the Acquia Exam Questions.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q51-Q56):

NEW QUESTION # 51

Recent log entries of your site show that there are too many failed login attempts for the site super admin user (user 1). How can you better secure the Drupal super admin user (user 1) from outside attacks?

- A. Only allow members of the Drupal community in good standing to be user 1.
- **B. Do not give this user an obvious name like "admin" or "administrator" which are too easy to guess.**
- C. Cancel the user account for user 1.
- D. Remove the "Administrator" role from user 1, which makes them an anonymous user.

Answer: B

Explanation:

Drupal's official security guidance for the super user account (user 1) specifically recommends that administrators do not name the first account "admin" or something obvious . The reason is straightforward: obvious usernames make brute-force and credential-

guessing attacks easier, because attackers already know half of the login credentials they need to target. Drupal's administration and security documentation also recommends limiting direct use of user 1 and protecting it carefully because it is a uniquely powerful account.

That makes option D the correct answer. The other options do not match Drupal's documented best practices.

There is no Drupal security rule about "members of the Drupal community in good standing" being allowed to use user 1. Canceling the user 1 account is not the recommended solution for this situation, and removing the Administrator role from user 1 would not make the account anonymous; in Drupal, user 1 is a special account with superuser behavior that is handled separately from ordinary role assignment. Drupal's own guidance emphasizes safer naming and tighter handling of the account, not these alternative actions.

NEW QUESTION # 52

A page has been added for a new product, and the marketing team wants you to add it to the main navigation menu, as a child of the "Products" page. During a promotion period, the team also wants you to add a link to the new page as a child of the "What's New" page.

What is the best way to add both links to the main navigation menu?

- A. Edit the new page, add a link in Menu Settings, and select "Products" as the Parent item. Clone the new page, and set the menu link parent to the "What's New" page. When the promotion is over, delete the cloned page.
- B. In the Main navigation menu, add two links to the new page, one with "Products" as the parent page and the other with "What's New" as the parent page. Set the second link to expire on the date the promotion ends.
- C. Edit the new page and create two links in the Menu Settings section, one with "Products" as the parent page and the other with "What's New" as the parent page. When the promotion is over, delete the second menu link.
- **D. Edit the new page, add a link in Menu Settings, and select "Products" as the Parent item. In the Main navigation menu, add a new link to the page and select "What's New" as the parent item. When the promotion is over, delete the second link from the menu.**

Answer: D

Explanation:

In Drupal 10 and Drupal 11, each content item (node) can only have one menu link created through its Menu settings. Drupal documentation explains that the Menu settings section allows you to place a node in a menu, but only as a single menu item. Therefore, you cannot create two menu links for the same node directly from the node edit form, which makes option D incorrect. The correct approach is to create one menu link via the node's Menu settings (placing it under "Products"), and then manually add an additional menu link in the Menu administration (Structure # Menus # Main navigation) that points to the same node but is placed under "What's New." This matches option A. After the promotion, the temporary menu link can be removed. Option B is incorrect because duplicating content creates unnecessary redundancy and breaks content management best practices. Option C is incorrect because Drupal core does not provide a built-in "menu link expiration" feature. Thus, Drupal's recommended method is to create one menu link via the node and another manually via the menu UI, making A the correct answer.

NEW QUESTION # 53

An audit of a corporate Drupal website revealed that a lot of user accounts are being created on the site, with the status "blocked". The site was initially set up to allow editors to self-register with additional administrator approval. However, the audit revealed that robots are creating a lot of user accounts and administrators are not able to keep up with the approval process.

How can we eliminate fake user registration?

- A. Change who can register accounts to "Administrators only."
- **B. Enable the Drupal core captcha field on the user registration form.**
- C. Hide user login by disabling the login block and/or move the login page.
- D. Configure new user accounts to "require email verification when a visitor creates an account."

Answer: B

Explanation:

The most effective and Drupal-recommended way to prevent automated (bot-driven) user registrations is to implement a challenge-response mechanism such as CAPTCHA. In Drupal 10 and Drupal 11, this is achieved using the CAPTCHA module (often paired with reCAPTCHA), which integrates directly into forms like user registration. By enabling a CAPTCHA field on the registration form, bots are prevented from submitting automated requests because they cannot solve the challenge, while legitimate users can proceed normally.

Drupal's security best practices emphasize mitigating automated abuse at the form level rather than relying solely on post-registration

controls. Option A (email verification) still allows bots to create accounts and flood the system, even if they cannot activate them. Option C (hiding login) does not affect registration endpoints and provides no real protection. Option D (restricting registration to administrators only) eliminates self-registration entirely, which may not meet business requirements and is not a balanced solution. Therefore, enabling CAPTCHA directly addresses the root cause-automated submissions-making it the most appropriate and scalable solution according to Drupal security guidelines.

NEW QUESTION # 54

A new customer has asked, why a Drupal-based website will be more flexible over a custom developed website. Which THREE Drupal features would you explain to the customer?

- A. Drupal provides comprehensive content modeling and listing of content using UI.
- B. Drupal allows you to directly rename database columns from the UI.
- C. Drupal can be used as a headless CMS out of the box.
- D. Drupal.org has an online store where you can purchase modules and themes.
- E. Drupal has a comprehensive and feature rich administrative UI out of the box.

Answer: A,C,E

Explanation:

Drupal 10 and Drupal 11 are flexible because they provide major site-building capabilities through configuration and core modules, instead of requiring everything to be custom-coded. Drupal supports headless /decoupled use cases out of the box through core web services such as JSON:API, which Drupal documentation describes as a standard way to expose site content for decoupled applications. That makes A correct.

Drupal also provides strong content modeling through entity types and fields, and it supports listing and displaying content through the Views UI. The User Guide and core documentation explain that site builders can define structured content types and then create listings, pages, blocks, sorting, and filtering through Views without writing custom code. That makes B correct.

Drupal additionally ships with a rich administrative interface for installing modules, managing themes, creating content types, editing fields, configuring permissions, and administering content. This is one of the platform's core strengths compared with a purely custom-built system, so E is correct.

Options C and D are not correct. Drupal.org provides contributed projects, but not an online store for buying modules and themes, and Drupal does not present direct database-column renaming as a normal UI-based site-building feature.

NEW QUESTION # 55

You have a website which is using a custom theme made specifically for that website. The client complains that content creators see an admin theme called "Claro" while creating or editing content. They want to see the content edit page in their own custom theme, but keep the other admin section in the Claro theme.

How can you achieve this?

- A. Give the Content Creator role permission to "View Admin Theme"
- B. On the Appearance page set admin theme as default theme
- C. Revoke the permission of viewing the custom theme for content creator role.
- D. On Appearance page, unselect the checkbox "See the administration theme when editing or creating content"

Answer: D

Explanation:

Drupal core provides a specific setting for whether node add/edit forms should use the administration theme.

On the Appearance page, this is the checkbox labeled "Use the administration theme when editing or creating content". When that setting is enabled, content creation and editing routes are treated as admin-theme routes; when it is disabled, those forms use the site's default front-end theme instead, while the rest of the administration area can still use the admin theme such as Claro. This behavior is implemented in core through the `node.settings` configuration value `use_admin_theme` and the node route subscriber that marks node operation routes as admin routes only when that setting is turned on.

That makes option A correct. Option B would not solve the requirement, because setting the admin theme as the default theme would affect the whole site's front-end presentation. Options C and D are incorrect because Drupal does not use a role permission like "View Admin Theme" to control this behavior for node edit pages.

The documented control for this requirement is the Appearance-page checkbox tied to `node.settings.use_admin_theme`.

NEW QUESTION # 56

.....

We've always put quality of our Drupal-Site-Builder guide dumps on top priority. Each Drupal-Site-Builder learning engine will go through strict inspection from many aspects such as the operation, compatibility test and so on. The quality inspection process is completely strict. The most professional experts of our company will check the Drupal-Site-Builder study quiz and deal with the wrong parts. That is why we can survive in the market now. Our company is dedicated to carrying out the best quality Drupal-Site-Builder study prep for you.
