Palo Alto Networks Cloud Security Professional Sample Questions (Q124-Q129):

NEW QUESTION # 124

Which two processes ensure that builds can function after a Console upgrade? (Choose two.)

- A. configuring build pipelines to download twistcli at the start of each build
- B. updating any build environments that have twistcli included to use the latest version
- C. allowing Jenkins to automatically update the plugin
- D. creating a new policy that allows older versions of twistcli to connect the Console

Answer: A,B

Explanation:

Ensuring that builds can function properly after a Console upgrade in Prisma Cloud involves strategies that maintain compatibility and functionality with the latest versions of the Prisma Cloud tools and services.

* Option B: Updating any build environments that have twistcli included to use the latest version is crucial because twistcli is Prisma Cloud's CLI tool used for scanning images, serverless functions, and IaC for vulnerabilities and compliance issues. Ensuring that twistcli is up to date in all build environments guarantees compatibility with the latest features and security definitions provided by Prisma Cloud, as well as ensures that any new or updated policies and checks are accurately enforced during the build process.

* Option C: Configuring build pipelines to download twistcli at the start of each build ensures that the most current version of twistcli is used every time a build is initiated. This approach is beneficial in dynamic CI/CD environments where builds are frequent, and maintaining the latest security posture is critical. By downloading twistcli dynamically, teams can automatically adapt to any updates or changes introduced in the Prisma Cloud Console without manual intervention, ensuring seamless integration and continuous compliance with Prisma Cloud's security standards.

NEW QUESTION # 125

Which three fields are mandatory when authenticating the Prisma Cloud plugin in the IntelliJ application? (Choose three.)

- A. Prisma Cloud API URL
- B. Tags
- C. Asset Name
- D. Access Key
- E. Secret Key

Answer: A,D,E

Explanation:

Reference: <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/prisma-cloud-devops-security/use-the-prisma-cloud-plugin-for-intellij.html> When authenticating the Prisma Cloud plugin in the IntelliJ application, the mandatory fields are the Secret Key, Prisma Cloud API URL, and Access Key. These credentials are required to securely authenticate and enable the plugin to communicate with the Prisma Cloud API, ensuring that the plugin can perform its intended functions within the development environment.

NEW QUESTION # 126

A Prisma Cloud administrator is tasked with pulling a report via API. The Prisma Cloud tenant is located on app2.prismacloud.io. What is the correct API endpoint?

- A. <https://api2.eu.prismacloud.io>
- B. <https://api2.prismacloud.io>
- C. <https://api.prismacloud.cn>
- D. <https://api.prismacloud.io>

Answer: B

Explanation:

<https://prisma.pan.dev/api/cloud/api-urls/>

When accessing the Prisma Cloud API for a tenant located on app2.prismacloud.io, the correct API endpoint to use would be <https://api2.prismacloud.io>. This endpoint corresponds to the Prisma Cloud service instance hosted on app2.prismacloud.io, ensuring that API requests are directed to the correct instance of the service for processing.

The use of api2 in the URL indicates that this is the second instance or a different geographical or functional partition of the Prisma Cloud service, which might be used for load balancing, redundancy, or serving different sets of users. It is crucial to use the correct endpoint corresponding to the Prisma Cloud console URL to ensure successful API communication and authentication.

NEW QUESTION # 127

The security team wants to enable the "block" option under compliance checks on the host. What effect will this option have if it violates the compliance check?

- A. The host will be taken offline.
- B. Containers on a host will be stopped.
- C. Additional hosts will be prevented from starting.
- D. **No containers will be allowed to start on that host.**

Answer: D

Explanation:

Enabling the "block" option under compliance checks on a host in Prisma Cloud signifies a strict enforcement policy, where any container that violates specified compliance checks will be prevented from starting on that host. This preventive measure is crucial for maintaining a secure and compliant cloud environment, ensuring that only containers that meet the organization's compliance and security standards are allowed to run. This approach aligns with Prisma Cloud's proactive security posture management, where potential risks are mitigated before they can impact the cloud environment.

NEW QUESTION # 128

An administrator sees that a runtime audit has been generated for a container.

The audit message is:

`"/bin/ls launched and is explicitly blocked in the runtime rule. Full command: ls -latr"` Which protection in the runtime rule would cause this audit?

- A. Networking
- B. Container
- C. **Processes**
- D. File systems

Answer: C

Explanation:

The protection in the runtime rule that would cause the audit message indicating "/bin/lS launched and is explicitly blocked in the runtime rule" is related to "Processes". In container security, a runtime rule set to monitor and restrict processes can block specific executables or commands from running within a container. If the rule is triggered, it indicates that a process that is explicitly denied by the policy attempted to execute, which in this case is the 'ls' command.
