New NSE7_OTS-7.2 Test Sims - NSE7_OTS-7.2 Frenquent Update

BONUS!!! Download part of TestPassKing NSE7_OTS-7.2 dumps for free: https://drive.google.com/open?id=1gSaIvxX3-n5_UbI_LC8ChWsNGFGRtt9X

Just as an old saying goes, it is better to gain a skill than to be rich. Contemporarily, competence far outweighs family backgrounds and academic degrees. One of the significant factors to judge whether one is competent or not is his or her NSE7_OTS-7.2 certificates. Generally speaking, NSE7_OTS-7.2 certificates function as the fundamental requirement when a company needs to increase manpower in its start-up stage. In this respect, our NSE7_OTS-7.2 practice materials can satisfy your demands if you are now in preparation for a NSE7_OTS-7.2 certificate.

Fortinet NSE7_OTS-7.2 Certification Exam is a valuable certification for security professionals who want to demonstrate their skills and expertise in securing OT networks. Fortinet NSE 7 - OT Security 7.2 certification exam is recognized globally as a benchmark for excellence in OT security and is suitable for security engineers, architects, and administrators who are responsible for securing OT networks. Candidates who successfully pass the exam will be certified as Fortinet NSE 7 - OT Security 7.2 professionals, which will enhance their career prospects and enable them to take on more challenging roles in the field of cybersecurity.

Updated Fortinet NSE7_OTS-7.2 exam practice material in 3 different formats

Revealing whether or not a man succeeded often reflect in the certificate he obtains, so it is in IT industry. Therefore there are many people wanting to take Fortinet NSE7_OTS-7.2 exam to prove their ability. However, want to pass Fortinet NSE7_OTS-7.2 Exam is not that simple. But as long as you get the right shortcut, it is easy to pass your exam. We have to commend TestPassKing exam dumps that can avoid detours and save time to help you sail through the exam with no mistakes.

Fortinet NSE7_OTS-7.2 (Fortinet NSE 7 - OT Security 7.2) Certification Exam is designed to validate the skills and knowledge of cybersecurity professionals in the field of operational technology (OT) security. Fortinet NSE 7 - OT Security 7.2 certification exam covers a wide range of topics related to OT security, including network segmentation, threat detection and prevention, policy creation and implementation, and risk assessment. NSE7_OTS-7.2 Exam is intended for individuals who have experience in OT security and wish to demonstrate their expertise in this area.

Fortinet NSE 7 - OT Security 7.2 Sample Questions (Q21-Q26):

NEW QUESTION # 21
As an OT network administrator you are managing three FortiGate devices that each protect different levels on the Purdue model To increase traffic visibility you are required to implement additional security measures to detect protocols from PLCs Which security sensor must you implement to detect protocols on the OT network?

- A. Endpoint Detection and Response (EDR)
- B. Intrusion prevention system (IPS)
- C. Deep packet inspection (DPI)
- D. Application control (AC)

Answer: D

NEW QUESTION # 22
Refer to the exhibit.

An OT network security audit concluded that the application sensor requires changes to ensure the correct security action is committed against the overrides filters.
Which change must the OT network administrator make?

- A. Set all application categories to apply default actions.
- B. Remove IEC.60870.5.104 Information.Transfer from the first filter override.
- C. Set the priority of the C.BO.NA.1 signature override to 1.
- D. Change the security action of the industrial category to monitor.

Answer: B

Explanation:
According to the Fortinet NSE 7 - OT Security 6.4 exam guide1, the application sensor settings allow you to configure the security action for each application category and network protocol override. The security action determines how the FortiGate unit handles traffic that matches the application category or network protocol override. The security action can be one of the following:
* Allow: The FortiGate unit allows the traffic without any further inspection.
* Monitor: The FortiGate unit allows the traffic and logs it for monitoring purposes.
* Block: The FortiGate unit blocks the traffic and logs it as an attack.
The priority of the network protocol override determines the order in which the FortiGate unit applies the security action to the traffic. The lower the priority number, the higher the priority. For example, a priority of
1 is higher than a priority of 10.
In the exhibit, the application sensor has the following settings:
* The industrial category has a security action of allow, which means that the FortiGate unit will not inspect or log any traffic that belongs to this category.
* The IEC.60870.5.104 Information.Transfer network protocol override has a security action of block, which means that the FortiGate unit will block and log any traffic that matches this protocol.
* The IEC.60870.5.104 Control.Functions network protocol override has a security action of monitor, which means that the FortiGate unit will allow and log any traffic that matches this protocol.
* The IEC.60870.5.104 Start/Stop network protocol override has a security action of allow, which means that the FortiGate unit will not inspect or log any traffic that matches this protocol.
* The IEC.60870.5.104 Transfer.C.BO.NA.1 network protocol override has a security action of block, which means that the FortiGate unit will block and log any traffic that matches this protocol.
The problem with these settings is that the IEC.60870.5.104 Transfer.C.BO.NA.1 network protocol override has a lower priority than the IEC.60870.5.104 Information.Transfer network protocol override. This means that if the traffic matches both protocols, the FortiGate unit will apply the security action of the higher priority override, which is block. However, the IEC.60870.5.104 Transfer.C.BO.NA.1 protocol is used to transfer binary outputs, which are essential for controlling OT devices. Therefore, blocking this protocol could have negative consequences for the OT network.
To fix this issue, the OT network administrator must set the priority of the IEC.60870.5.104 Transfer.C.BO.
NA.1 network protocol override to 1, which is higher than the priority of the IEC.60870.5.104 Information.
Transfer network protocol override. This way, the FortiGate unit will apply the security action of the lower priority override, which is allow, to the traffic that matches both protocols. This will ensure that the FortiGate unit does not block the traffic that is used to transfer binary outputs, while still blocking the traffic that is used to transfer information.
1: NSE 7 Network Security Architect - Fortinet

NEW QUESTION # 23
Refer to the exhibit.

An OT administrator ran a report to identify device inventory in an OT network.
Based on the report results, which report was run?

- A. A FortiAnalyzer device report

- B. A FortiSIEM CMDB report
- C. A FortiSIEM analytics report
- D. A FortiSIEM incident report

Answer: B

NEW QUESTION # 24

Refer to the exhibit, which shows a non-protected OT environment.

An administrator needs to implement proper protection on the OT network.
Which three steps should an administrator take to protect the OT network? (Choose three.)

- A. Deploy a FortiGate device within each ICS network.
- B. Configure firewall policies with web filter to protect the different ICS networks.
- C. Configure firewall policies with industrial protocol sensors
- D. Use segmentation
- E. Deploy an edge FortiGate between the internet and an OT network as a one-arm sniffer.

Answer: A,C,D

NEW QUESTION # 25

Which statement about how FortiNAC re-evaluates previously profiled devices is true?

- A. FortiNAC detects rogue devices by the IP address.
- B. FortiNAC considers rogue devices as known endpoints.
- C. FortiNAC remembers the matching rule of the rogue device.
- D. FortiNAC matches the rogue device with only one device profiling rule.

Answer: C

Explanation:
FortiNAC stores which profiling rule originally matched a device. When it later re-evaluates that device, it compares against the same saved rule to confirm or change classification.

NEW QUESTION # 26
