

# Free PDF Quiz 2026 Juniper Perfect New JN0-460 Test Camp

BONUS!!! Download part of Prep4pass JN0-460 dumps for free: [https://drive.google.com/open?id=1FZuoF5konnX\\_ovX3RVzorMA\\_dUNsrDvD](https://drive.google.com/open?id=1FZuoF5konnX_ovX3RVzorMA_dUNsrDvD)

A lot of applicants have studied from Juniper JN0-460 practice material. They have rated it positively because they have cracked Juniper JN0-460 Certification on their first try. Prep4pass guarantees its customers that they can pass the JN0-460 test on the first attempt.

## Juniper JN0-460 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Campus EVPN-VXLAN:</b> This section of the exam measures the skills of Data Center Network Engineers and explores the key principles of VXLAN and EVPN technologies. Candidates learn about Layer 2 tunneling, data and control plane operations, and the functions of VTEPs and VXLAN gateways. Additionally, it covers advanced EVPN concepts such as multipath routing, route types, and identifiers. The section concludes with a focus on MAC learning and policy applications to ensure efficient, scalable, and resilient network fabrics.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Wired Assurance Management or Operations:</b> This section of the exam measures the skills of Network Operations Engineers and focuses on the management and operational aspects of Wired Assurance. It covers switch management, port profiles, and dynamic port configuration to ensure optimal network performance. The section also explores service-level expectations, client insights, and the use of APIs for improved monitoring and automation. Candidates gain an understanding of how MistAI enables proactive management and predictive troubleshooting to maintain service quality.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Wired Assurance Provisioning or Deployment:</b> This section of the exam measures the skills of Network Deployment Specialists and focuses on the provisioning and deployment processes of Wired Assurance. It includes the essential steps and options involved in setting up networks, from configuration templates to deployment methodologies. Candidates learn about provisioning procedures, supported architectures, and the use of site variables to streamline automation and consistency across wired infrastructures.</li> </ul>

Topic 4	<ul style="list-style-type: none"> <li>• <b>Wired Assurance Fundamentals:</b> This section of the exam measures the skills of Network Support Engineers and covers the foundational elements of Wired Assurance within the Mist AI ecosystem. It introduces candidates to key concepts such as supported devices, solution architecture, and the main features and components that define Wired Assurance functionality. Additionally, it highlights how Mist AI accounts, analytics, and subscriptions integrate to deliver intelligent insights for network performance and operations.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Campus Fabric Architecture:</b> This section of the exam measures the skills of Network Design Engineers and focuses on understanding and deploying Campus Fabric Architectures. It introduces essential design concepts such as EVPN multihoming, IP Clos architecture, and micro-segmentation. The section also compares CRB and ERB models, explains scaling requirements, and highlights how the Campus Fabric Core-Distribution design supports high-performance, scalable, and secure enterprise networks.</li> </ul>

## JN0-460 Test Engine - Latest JN0-460 Test Labs

Do not waste further time and money, get real Juniper JN0-460 pdf questions and practice test software, and start JN0-460 test preparation today. Prep4pass will also provide you with up to 365 days of free exam questions updates. Free demo of JN0-460 Dumps PDF allowing you to try before you buy and one-year free update will be allowed after purchased.

## Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q47-Q52):

### NEW QUESTION # 47

The management of switches using Mist AI Wired Assurance includes which of the following features?

- A. Manual-only switch discovery
- B. Increased network congestion
- C. Reduced data security
- **D. AI-driven insights for switch health**

**Answer: D**

### NEW QUESTION # 48

Which statement is correct about a 3-stage campus fabric IP Clos?

- **A. The core layer is connected to the access layer.**
- B. The distribution layer is connected to the access layer.
- C. The core layer devices are connected to each other.
- D. The distribution layer is connected to the core layer.

**Answer: A**

Explanation:

Juniper's official Campus Fabric IP Clos design for Mist Wired Assurance defines that the 3-stage IP Clos topology eliminates the traditional distribution layer entirely. This architecture is intended for smaller campus environments that do not need an intermediate distribution layer between the access and core.

"Juniper's Wired Assurance supports 3-Stage and 5-Stage IP Clos deployments. The 3-Stage IP Clos is targeted towards deployments that do not require a Distribution Layer and have smaller scale requirements." Because the distribution layer is not present, the only hierarchical connection in a 3-stage campus fabric is between the core and access layers. Traffic is routed directly at the access layer, and each access switch acts as a Layer-3 gateway (IRB) for its VLANs.

"In a campus fabric IP Clos architecture, Mist provisions Layer-3 (L3) integrated routing and bridging (IRB) interfaces on the access layer. All the access switches are configured with the same IP address for each L3 subnet." Additionally, the Juniper documentation explains that point-to-point links are configured between layers, and in the case of the 3-stage design (with no distribution), this means between the core and access devices:

"The point-to-point links between each layer utilize /31 addressing to conserve addresses." Therefore, the correct statement is C: The core layer is connected to the access layer.

Options A and B incorrectly mention a distribution layer that does not exist in this topology.

Option D is incorrect because core (spine) devices in a Clos fabric are not interconnected with each other.

#### NEW QUESTION # 49

Which type of device is commonly supported by Wired Assurance?

- A. Fitness wearables.
- B. Personal computers and laptops.
- C. Network switches and routers.
- D. Smart home devices.

**Answer: C**

#### NEW QUESTION # 50

Which statement is correct about the Switch Insights section?

- A. A user can view traffic per port on this page.
- B. Users can rollback to a previously known configuration from this page.
- C. Only the top five switch events are available on this page.
- D. The Switch Insights feature is only available for EX Series switches.

**Answer: A**

Explanation:

The Switch Insights section in the Mist dashboard provides detailed switch telemetry, including interface statistics, port utilization, client count, and traffic analysis. It allows administrators to view real-time and historical traffic per port, identify top talkers, and detect anomalies.

"The Switch Insights page displays real-time and historical data such as traffic per port, PoE usage, connected clients, and interface errors for every switch managed by Mist." Option A: Correct - port-level traffic and utilization metrics are visible in Switch Insights.

Option B: Incorrect - available for all Mist-managed switches (EX and supported QFX).

Option C: Incorrect - displays complete event history, not limited to five events.

Option D: Incorrect - configuration rollback is done via the configuration history section, not Switch Insights.

#### NEW QUESTION # 51

You must provide physical connectivity between the core and access devices.

Which step of the campus fabric deployment process would allow you to accomplish this task?

- A. Configure the overlay network.
- B. Define the topology type and select the devices.
- C. Configure the underlay network.
- D. Apply the intent.

**Answer: B**

Explanation:

In the Campus Fabric Deployment Wizard, the first step is defining the topology type (3-stage or 5-stage IP Clos) and mapping the physical connections between devices (core, distribution, and access).
