VEEAM CERTIFIED ENGINEER V12 VMCE_V12 SAMPLE QUESTIONS

A Veeam administrator is creating a protection group that needs to back up all servers for the accounting department using Veeam Agent for Microsoft Windows. New accounting servers must be automatically added to the protection group. How is this accomplished?

- A. Create a protection group that reads a .csv file listing the accounting servers.
- B. Create a protection group and set it to automatically scan every three hours for new servers.
- C. Install a configuration file on each of the accounting servers that adds it to the protection group.
- D. Create an Active Directory based protection group targeted at an Active Directory security group. - Answer - Answer: D

A backup administrator decided to move the Veeam Backup & Replication server and configuration database to new servers.

Which configuration restore mode should be used?

- A. Migrate
- B. Planned failover
- C. Restore
- D. Failover plan - Answer - Answer: A

A file on a Windows VM hosted on vSphere is corrupted and must be restored. VMware tools are installed and up to date on the VM. For some reason, the Veeam mount server cannot connect to the VM through the network.

Which of the following restore methods provides the fastest restore (RTO)?

- A. Run Veeam file restore wizard and let it restore through VIX.
- B. Start an Instant VM Recovery session and log on into the restored image to copy/paste the file to restore.
- C. It is impossible to restore the file on the VM if the mount server cannot reach it through the network.
- D. Run Veeam file restore wizard and use the "copy to" to download the file locally in a shared folder. - Answer - Answer: A

Veeam ONE has been installed and configured. The infrastructure contains five Veeam Backup & Replication servers.

The administrator needs to check the remaining capacity on each of the backup repository servers. Where can they see this information?

- A. Under Infrastructure View, look up the Veeam Backup & Replication servers to see the guest disk space.
- B. Under Data Protection View, look up the backup repository servers to see the remaining capacity.

The Veeam Certified Engineer v12 (VMCE_v12) practice test software keeps track of each previous attempt and highlights the improvements with each attempt. The Veeam Certified Engineer v12 (VMCE_v12) mock exam setup can be configured to a particular style and arrive at unique questions. Itbraindumps Veeam VMCE_v12 practice exam software went through real-world testing with feedback from more than 90,000 global professionals before reaching its latest form. The Veeam VMCE_v12 Exam Dumps are similar to real exam questions. Our Veeam VMCE_v12 practice test software is suitable for computer users with a Windows operating system.

Veeam VMCE_v12 Exam Overview:

Certification Vendor:	Veeam
Exam Name:	Veeam Certified Engineer v12 (VMCE_v12)
Exam Number:	VMCE_v12
Exam Duration:	180 minutes
Exam Format:	Multiple Response, Scenario-based Questions, Drag and Drop, Multiple Choice
Passing Score:	70%
Real Exam Qty:	50-60

Certificate Validity Period:	2 years
Available Languages:	English
Exam Price:	Approximately USD 200-250 (varies by region)
Recommended Training:	Veeam Backup & Replication v12 Training Course Veeam Training Portal
Exam Registration:	Veeam Certification Portal Pearson VUE Veeam Exams
Sample Questions:	Veeam VMCE_v12 Sample Questions
Exam Way:	Online proctored or test center delivery via Pearson VUE
Pre Condition:	Completion of official Veeam VMCE v12 training course (Veeam Backup & Replication v12: Configure, Manage and Recover) is required/recommended before attempting the exam.
Official Syllabus URL:	https://www.veeam.com/certification.html

Top Features of Itbraindumps Veeam VMCE_v12 Real Exam Questions

The clients can consult our online customer service before and after they buy our VMCE_v12 study materials. We provide considerate customer service to the clients. Before the clients buy our VMCE_v12 study materials they can consult our online customer service personnel about the products' version and price and then decide whether to buy them or not. After the clients buy the VMCE_v12 study materials they can consult our online customer service about how to use them and the problems which occur during the process of using. If the clients fail in the test and require the refund our online customer service will reply their requests quickly and deal with the refund procedures promptly. In short, our online customer service will reply all of the clients' questions about the VMCE_v12 Study Materials timely and efficiently.

Veeam VMCE_v12 Exam Syllabus Topics:

Topic	Details
Topic 1	Recovery scenarios and features: This section covers the impact of various recovery procedures and choosing the most viable recovery technique.
Topic 2	Scale-out Backup Repository: This section of the exam covers the description of the architecture, placement policies, and data tiers.
Topic 3	Virtual machine backup: This section of the exam covers protecting the VMware and Hyper V to safeguard VMware that follows SLAs.
Topic 4	Risk scenarios: This section covers exploring various risk scenarios and identifying the type of risks we may face in the environment.
Topic 5	Enacting a recovery: This section is about getting practice in recovering various recoveries with diverse data.
Topic 6	Backup data optimizations: This section covers the need for object storage to be backed up and the supported object storage solutions while utilizing repositories.
Topic 7	Moving or copying backups: This section of the exam covers use cases for backup processes using VeeamMover.
Topic 8	Initial security considerations: This section defines ways and tools to secure the Veeam backup server.
Topic 9	Veeam Backup Enterprise Manager: The section describes the use cases for Veeam Backup Enterprise Manager.

Topic 10	Core components: This section of the exam covers exploring the functionality of Veeam Backup & Replication and system requirements.
Topic 11	Transport modes: This section aims to analyze different methods to collect and read data from the production environment.
Topic 12	Agent backup: This section of the exam covers the identification of protection groups for automating the installation of Veeam Agents.
Topic 13	Unstructured data backup: This section is about highlighting vital features required to protect unstructured data.
Topic 14	Data protection strategies: This section of the exam covers an overview of data protection strategies.

Veeam Certified Engineer v12 Sample Questions (Q101-Q106):

NEW QUESTION # 101

An engineer has used a Linux Hardened Repository as the backup repository. The immutability period is set to 60 days.

The backup settings are:

- Retention Policy: 14 days
- GFS Weekly full backup: 1 week
- GFS Monthly full backup: 6 months

If a full backup is created on 27th May 2023 with a monthly GFS flag, when will this restore point be automatically deleted?

- A. 28th July 2023
- B. 2V June 2023
- C. 28th November 2023
- D. 5th August 2023

Answer: C

Explanation:

The immutability period set on a Linux Hardened Repository prevents deletion of backup files for the duration of the immutability period. In this case, it is set to 60 days. However, the GFS (Grandfather- Father-Son) retention policy specifies that a monthly full backup is to be kept for 6 months. Since the full backup was created on 27th May 2023 and flagged as a monthly GFS backup, it will be retained for 6 months irrespective of the retention policy or the immutability setting. Hence, the restore point will be automatically deleted after 6 months, which would be on the 28th of November 2023.

NEW QUESTION # 102

Which two ways can a Microsoft SQL database be backed up to a Veeam repository using tools native to Microsoft SQL?

(Choose two.)

- A. Use Veeam Agent for Microsoft SQL.
- B. Use Enterprise Manager s self-service backup capabilities.
- C. Use application-aware processing for Microsoft SQL.
- D. Use Veeam Plug-in for Microsoft SQL.

Answer: C,D

Explanation:

Use the Veeam Plug-in for Microsoft SQL Server

This installs directly into SQL Server Management Studio and leverages SQL's own backup engine (full, differential, log, copy-only, etc.) to write backups straight to your Veeam repositories.

Use application-aware processing for Microsoft SQL

In a standard VM backup job you enable "application-aware processing," which uses Microsoft's VSS writer for SQL Server to quiesce the databases and capture a transactionally-consistent image - those VSS-based backups then land in your Veeam repository.

NEW QUESTION # 103

what should be Implemented when backing up HAS file shares to ensure there Is more than one copy of the data?

- A. Archive repository
- **B. Backup repository**
- C. Cache repository
- D. Secondary copy

Answer: B

Explanation:

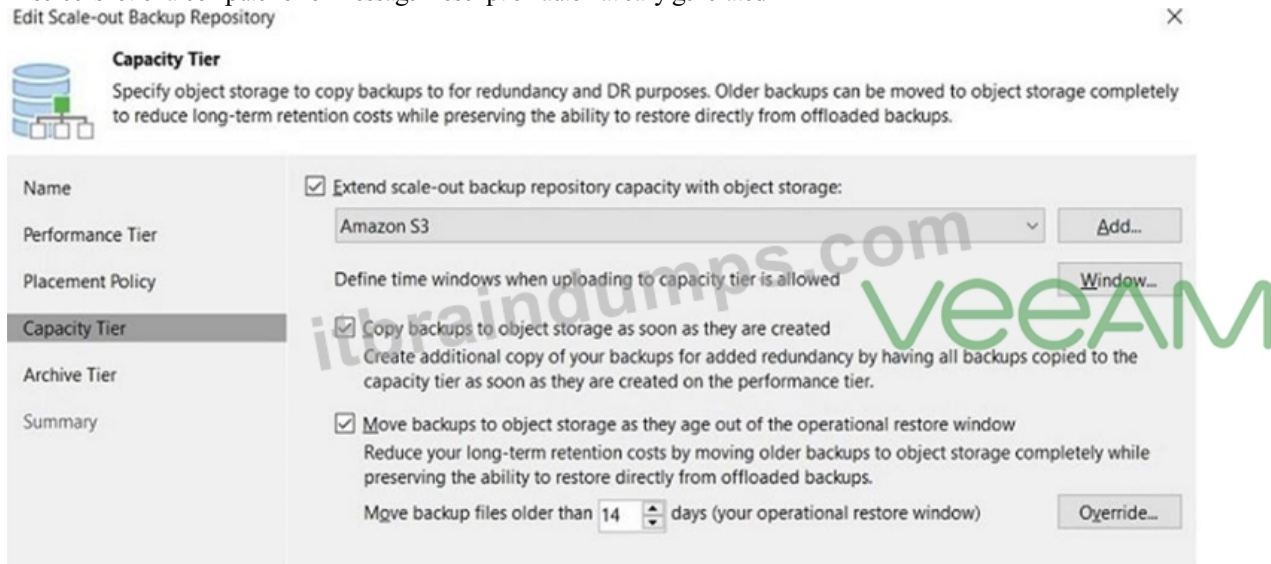

Explanation

NEW QUESTION # 104

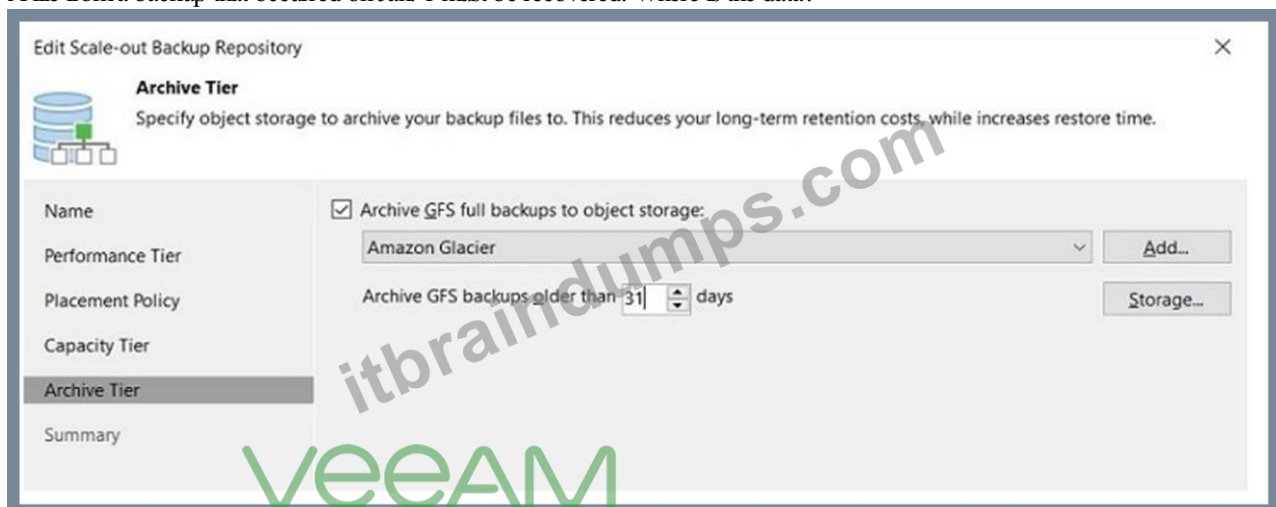

A Scale-out Backup Repository with one local extent has been configured as follows.

A screenshot of a computer error message Description automatically generated

A screenshot of a computer Description automatically generatedA daily VMware backup job retention is 31 days, keeping weekly GFS full backups for 14 weeks.It is Jan. 20.

A file from a backup that occurred on Jan. 1 must be recovered. Where is the data?

- A. The capacity tier
- B. The performance tier
- **C. The archive tier**
- D. The performance tier and the capacity tier

Answer: C

NEW QUESTION # 105

A Veeam engineer creates a Scale-Out Backup Repository (SOBR) that uses AWS S3 as the Performance Tier. The backup job is configured to "Keep monthly full backups for: 12 months".

The engineer wants the backups to move to Glacier after 90 days. What should the engineer do first to achieve this goal?

- A. Add an Archive Tier with the appropriate Bucket from S3
- B. Create a Vault in S3 Glacier
- C. Add AWS S3 as a Capacity Tier before they can use Glacier
- D. Reconfigure the SOBR to use block storage as the Performance Tier

Answer: A

Explanation:

Archive tier is an additional tier of storage that can be attached to a scale-out backup repository.

You can transport data to the archive tier for archive storage from the following extents:

From performance extents that consist of Amazon S3, Microsoft Azure or S3 compatible with data archiving object storage repositories.

From capacity extents.

It is not required to have a capacity tier before using archive tier.
