Our ED-Con-101 study materials are not only as reasonable priced as other makers, but also they are distinctly superior in the following respects.

Salesforce Certified Education Cloud Consultant Sample Questions (Q32-Q37):

NEW QUESTION # 32

A university is interested in the Student Success Hub Tableau Accelerator. Which object should the consultant recommend to ensure there is data?

- A. Availability Topic
- B. Behavior Incident
- C. Appointment Attendee

Answer: C

Explanation:

The Appointment Attendee object in Student Success Hub is used to track the students and support staff who attend an appointment¹. The Student Success Hub Tableau Accelerator uses data from this object, along with other objects such as Alert, Appointment, Case, Contact, Course Connection, Course Offering, Program Enrollment, Term, and User, to create visualizations of student and support staff data². The Behavior Incident object is not part of Student Success Hub or the Tableau Accelerator. The Availability Topic object is used to categorize the availability of support staff for appointments¹, but it is not used by the Tableau Accelerator. Reference:

1: EDA Object Reference - Salesforce³

2: Analyze Student Success Data with the Tableau Accelerator - Salesforce⁴

NEW QUESTION # 33

A consultant needs to import a large volume of records into a university's Salesforce production environment that has the Education Data Architecture (EDA). The import file already defines Account and Address information. The university's environment has a private sharing model and several sharing rules.

Which of these temporary actions should the consultant take before importing the data?

- A. Disable sharing rules using TDTM.
- B. Change the account model to Household.
- C. **Disable unnecessary code using Table-Driven Trigger Management (TDTM).**

Answer: C

Explanation:

TDTM is a feature of EDA that allows you to manage the automation and custom logic that runs when data is inserted, updated, or deleted. By disabling unnecessary code, such as trigger handlers or validation rules, you can improve the performance and speed of the data import, avoid errors or unwanted data creation, and reduce the risk of hitting governor limits^{1,2}.

Disabling sharing rules using TDTM is not a recommended action, because sharing rules are not controlled by TDTM, but by the Salesforce security model. Sharing rules are used to grant additional access to records based on criteria or ownership. Disabling them may affect the visibility and accessibility of the imported data for the users^{3,4}.

Changing the account model to Household is not a necessary action, because the account model is a preference that depends on how the university wants to organize its contacts and accounts. EDA supports both the Administrative and Household account models, and the import file already defines the Account information. Changing the account model may cause data loss or duplication, and require additional configuration and mapping⁵.

NEW QUESTION # 34

University Investment Services (UIS) is an internal department that manages the university endowment through financial investments. It operates independently of the university and only works with investment companies and financial institutions. UIS is interested in a CRM that will track investment companies, its company Contacts, Leads, Opportunities, and Activities.

Which solution should the consultant recommend?

- A. **Financial Services Cloud**
- B. Education Data Architecture
- C. Sales Cloud

Answer: A

Explanation:

Financial Services Cloud is a Salesforce solution that is designed for the financial services industry, including wealth and asset management, banking, and insurance¹. Financial Services Cloud provides features and functionality that are tailored to the needs of UIS, such as:

Tracking investment companies and their contacts as financial accounts and account members².

Managing leads, opportunities, and activities with standard Salesforce objects and tools³.

Leveraging Einstein AI to surface insights and recommendations for investment opportunities⁴.

Integrating with core financial systems and data sources using prebuilt connectors and accelerators⁵.

Sales Cloud is a general-purpose CRM solution that does not have the specific features and functionality for the financial services industry⁶.

Education Data Architecture (EDA) is a Salesforce solution that is designed for the education sector, including K-12 and higher education institutions⁷. EDA does not have the specific features and functionality for the financial services industry either.

- 2: Financial Services Cloud Data Model - Salesforce
- 3: Financial Services Cloud User Guide - Salesforce
- 4: Einstein for Financial Services Cloud - Salesforce
- 5: Financial Services Cloud Integration Guide - Salesforce
- 6: Sales Cloud Overview - Salesforce
- 7: Education Data Architecture Overview - Salesforce

NEW QUESTION # 35

The university advancement team wants the ability to track students' prior and current connections to other schools. Which two object should the consultant evaluate to connect students to other educational institutions?

- A. Affiliations and Program Plan
- B. Relationship and Affiliations
- C. Education History and Affiliations

Answer: C

Explanation:

The consultant should evaluate the Education History and Affiliations objects to connect students to other educational institutions. Education History tracks the previous or current education of a Contact, such as the school name, degree, and graduation date. Affiliations track the relationship between a Contact and an Account, such as a student and a school. Relationship is an object that tracks the personal or professional connection between two Contacts, not between a Contact and an Account. Program Plan is an object that defines the requirements for completing an academic program, not the connection to a school. Reference:

NEW QUESTION # 36

A university wants to improve student retention by developing a tool for students to engage at scale, find answers to common questions and resources, and allow students to interact with student organizations.

What should a consultant recommend to meet this requirement?

- A. Experience Cloud
- B. Interaction Studio
- C. Einstein Bots
- D. Pardot Engagement Studio

Answer: A

Explanation:

Experience Cloud is a solution that the consultant can recommend to meet the requirement of developing a tool for students to engage at scale, find answers to common questions and resources, and allow students to interact with student organizations.

Experience Cloud is a product that allows users to create and manage digital experiences for customers, partners, or employees on any device or channel. Experience Cloud can help the university improve student retention by creating a student community that provides features such as forums, articles, chat, groups, events, or surveys. Pardot Engagement Studio, Interaction Studio, and Einstein Bots are not solutions that can meet the requirement of developing a tool for students to engage at scale, find answers to common questions and resources, and allow students to interact with student organizations.
