VMware 3V0-21.23 Exam Syllabus Topics:

Topic	Details
Topic 1	• Plan and Design the VMware Solution: This part targets Solution Designers, evaluating their ability to gather business objectives, create conceptual models based on these objectives, develop logical designs, and translate them into physical designs that meet specific requirements like manageability or security.
Topic 2	• VMware Products and Solutions: Targeting VMware Engineers, this section describes VMware Cloud Foundation architecture, its components like vSphere and NSX, benefits such as automation and scalability, and use cases like hybrid cloud environments. It assesses understanding of VMware Validated Solutions.
Topic 3	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers differentiating between business and technical requirements, as well as conceptual, logical, and physical design. A key skill measured is "Designing System Availability."

3V0-21.23 Braindumps Pdf - 3V0-21.23 Exam Questions Answers

Created on the exact pattern of the Actual 3V0-21.23 Tests, FreeDumps's dumps comprise questions and answers and provide all important information in easy to grasp and simplified content. The easy language does not pose any barrier for any learner. The complex portions of the certification syllabus have been explained with the help of simulations and real-life based instances. The best part of FreeDumps's dumps is their relevance, comprehensiveness and precision. You need not to try any other source for exam

preparation. The innovatively crafted dumps will serve you the best; imparting you information in fewer number of questions and answers.

VMware vSphere 8.x Advanced Design Sample Questions (Q19-Q24):

NEW QUESTION # 19
A company has a requirement that all production applications must have a maximum tolerable downtime (MTD) of one hour per month.
Which statement would be included in the physical design to support this requirement?

- A. vSphere HA will be enabled on all clusters.
- B. vSphere HA Host Failure Response will be set to Restart VMs.
- C. Server hardware has already been purchased for the production applications.
- D. vSphere Fault Tolerance (FT) will not be enabled for the production applications.

Answer: B

Explanation:
To meet the requirement of a maximum tolerable downtime (MTD) of one hour per month for production applications, the solution must ensure high availability and quick recovery of virtual machines (VMs) in the event of a host failure. Enabling vSphere High Availability (HA) with the Host Failure Response set to Restart VMs will automatically restart VMs on other hosts within the cluster in the event of a host failure. This minimizes downtime and helps meet the MTD requirement by ensuring minimal disruption to production workloads.

NEW QUESTION # 20
An architect is designing a new greenfield environment with 600 ESXi hosts in an automated fashion. The engineering department already has a PXE Boot server, TFTP server, and DHCP server set up with an NFS mount for their current Linux servers. The architect must be able to demonstrate and meet a security requirement to have all infrastructure processes separated.
Which recommendation should the architect make for the ESXi host deployment?

- A. Ask the business to expand the engineering environment to service the virtual environment as well
- B. Deploy each ESXi host individually and document it to satisfy security requirements
- C. Request a common shared network with flexible security measures to accommodate different auto deployment options
- D. Request an isolated network segment to use and dedicate it to Auto Deploy functions

Answer: D

NEW QUESTION # 21
Following a recent acquisition, the architect learns that both companies use vSphere on-premise and will need to combine the data centers into one. The acquired company's licenses will not be renewed for cost-savings related to the acquisition. All consumed vSphere licenses must have active support to support line-of-business operations. The merged environment must maintain 25% spare capacity. The architect has a small budget remaining unallocated for hardware.
The architect has calculated that the current vSphere environment can absorb the acquired company's virtual machines but the cluster will run at 90% memory utilization and at 50% CPU utilization.
Which design decision can the architect make to incorporate the new company's virtual machines into the combined vSphere environment?

- A. Use the current budget to add memory to the cluster to increase each ESXi host's capacity and add the new virtual machines.
- B. Purchase extra hosts to add to the cluster in anticipation of adding the acquired company's virtual machines.
- C. Purchase new licenses for some of the acquired company's ESXi hosts and add them to the cluster to hold the acquired company's virtual machines.
- D. Migrate the acquired company's virtual machines into the vSphere environment as it will currently fit.

Answer: A

Explanation:
A wrong because must maintain 25% spare capacity.
C wrong, extra host need new license and new hardware, large budget require D wrong because The acquired company's licenses

will not be renewed for cost-savings related to the acquisition.

NEW QUESTION # 22

What is the purpose of determining business continuity requirements for a vSphere design?

- A. To optimize the system's data storage and retrieval processes.
- B. To identify the virtual machines and cores needed for the vSphere environment.
- C. To ensure uninterrupted business operations in case of disruptions or failures.
- D. To specify the expected levels of system performance and responsiveness.

Answer: C

NEW QUESTION # 23

During the installation of ESXi, what is the minimum number of network interfaces required for management and vMotion traffic, respectively?

- A. 1, 1
- B. 0, 1
- C. 1, 0
- D. 2, 2

Answer: A
