Splunk Enterprise Certified Architect Sample Questions (Q48-Q53):

NEW QUESTION # 48

At which default interval does metrics.log generate a periodic report regarding license utilization?

- A. 300 seconds
- B. 10 seconds
- C. 30 seconds
- **D. 60 seconds**

Answer: D

Explanation:

Explanation

The default interval at which metrics.log generates a periodic report regarding license utilization is 60 seconds.

This report contains information about the license usage and quota for each Splunk instance, as well as the license pool and stack.

The report is generated every 60 seconds by default, but this interval can be changed by modifying the license_usage stanza in the

metrics.conf file. The other intervals (10 seconds, 30 seconds, and 300 seconds) are not the default values, but they can be set by the administrator if needed. For more information, see About metrics.log and Configure metrics.log in the Splunk documentation.

NEW QUESTION # 49

When converting from a single-site to a multi-site cluster, what happens to existing single-site clustered buckets?

- A. They will stop replicating within the single-site and remain on the indexer they reside on and age out according to existing policies.
- **B. They will maintain replication as required according to the single-site policies, but never age out.**
- C. They will be replicated across all peers in the multi-site cluster and age out based on existing policies.
- D. They will continue to replicate within the origin site and age out based on existing policies.

Answer: B

NEW QUESTION # 50

When Splunk indexes data in a non clustered environment, what kind of files does it create by default?

- A. Compressed and .tsidx files.
- B. Index and .tsidx files.
