We all know the effective diligence is in direct proportion to outcome, so by years of diligent work, our experts have collected the frequent-tested knowledge into our CompTIA 220-1202 practice materials for your reference. So our CompTIA A+ Certification Exam: Core 2 training materials are triumph of their endeavor.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q240-Q245):

NEW QUESTION # 240

Which of the following file types would a desktop support technician most likely use to automate tasks for a Windows user log-in?

- A. .bat
- B. .sh
- C. .py
- D. .js

Answer: A

Explanation:

A .bat file (batch file) is a script file in DOS, OS/2, and Microsoft Windows. It contains a series of commands that are executed by the command-line interpreter. In Windows environments, batch files are commonly used to automate log-in tasks, such as mapping network drives, launching applications, or setting environment variables during the user's logon process.

B).sh is a shell script used in Linux/Unix environments.

C).py is a Python script, which can be used for automation but is not commonly run directly at user logon in standard Windows environments.

D).js is JavaScript, used mainly in web development and not for system-level scripting in Windows logon automation.

Reference:

CompTIA A+ 220-1102 Objective 1.3: Use appropriate Microsoft operating system features and tools.

Study Guide Section: Scripting basics and file types for automation - .bat for Windows

NEW QUESTION # 241

A user's application only works with a legacy version of the OS. The OS is reaching its end of life date. For security reasons, the company is migrating to the current version of the OS. Which of the following is the most efficient way to complete the migration while maintaining accessibility to the application?

- A. Terminal server
- B. Multiboot
- C. Bare-metal server
- D. Virtualization

Answer: D

Explanation:

Virtualization allows the legacy OS to be run in a virtual machine (VM) on top of the newer OS.

This method provides backward compatibility without requiring outdated operating systems on physical hardware.

NEW QUESTION # 242

A user is unable to use the latest version of an app on a legacy tablet. What is the most likely reason?

- A. MDM is blocking updates
- B. The tablet is infected with malware
- C. Space is inadequate
- D. The OS is end-of-life

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Older tablets may not support newer app versions due to incompatible or unsupported operating systems. App developers often drop support for outdated OS versions.

From Travis Everett - CompTIA A+ All-in-One Exam Guide:

"When an app won't install on an older device, check the OS version. Most apps require a minimum OS level for compatibility and security."

NEW QUESTION # 243

Which of the following methods is a way to superficially delete files on a hard drive?

- A. Wiping
- B. Shredding
- C. Degaussing
- **D. Low-level formatting**
- E. Drilling

Answer: D

Explanation:

"Superficially delete" in this context means removing data without physically destroying the drive-i.e., using a logical/sanitization method rather than a destruction method. Drilling and shredding are explicit physical destruction techniques that render a drive unusable, while degaussing is a purging/destruction-style method that disrupts magnetic fields and also makes the drive unreliable for future use. The remaining choices (wiping and low-level formatting) are software-based sanitization approaches. In A+ terminology, a low-level format is contrasted with a standard format and is commonly associated with a complete overwrite/zero-fill process that clears the disk so data does not remain recoverable, while still leaving the drive functional afterward. The All-in-One guide notes that modern "low-level formatting" is often used to describe a zero-fill /overwrite operation that writes zeros to every location on the drive. It also distinguishes this from normal deletion, where data can remain until overwritten. Likewise, Docter differentiates formatting vs sanitation vs destruction, emphasizing that sanitation (including low-level formats/wipes) removes data without tossing media for "prying eyes."

NEW QUESTION # 244

A customer is unable to open some files on their system. Each time the customer attempts to open a file, the customer receives a message that the file is encrypted. Which of the following best describes this issue?

- **A. Ransomware**
- B. Keylogger
- C. Cryptominer
- D. Phishing

Answer: A

Explanation:

Ransomware is malware that encrypts a user's files and then demands payment (a ransom) in exchange for the decryption key. The user's inability to open the files and the message indicating they're encrypted are classic signs of a ransomware attack.

NEW QUESTION # 245

.....

PassExamDumps, as a provider, specializing in providing all candidates with 220-1202 exam-related materials, focus on offering the most excellent dumps for the candidates. In contrast with other websites, PassExamDumps is more trustworthy. Why? Because PassExamDumps has many years of experience and our CompTIA experts have been devoted themselves to the study of CompTIA certification exam and summarize 220-1202 Exam rules. Thus, PassExamDumps exam dumps have a high hit rate. Meanwhile, it guarantees the qualification rate in the exam. Therefore, PassExamDumps got everyone's trust.
