NEW QUESTION # 52

A Citrix Administrator is configuring a Citrix ADC high availability (HA) pair and needs to ensure that one Citrix ADC is UP and primary at all times to ensure the business websites are always available.

What does the administrator need to do to ensure that the Citrix ADCs still handle web traffic in the event that both nodes become unavailable or fail a health check?

- A. Configure HA Fail-safe mode on the Primary Citrix ADC only.
- **B. Configure HA Fail-safe mode on each Citrix ADC independently.**
- C. Disable HA Fail-safe mode on the Primary Citrix ADC only.
- D. Disable HA Fail-safe mode on the Secondary Citrix ADC.

Answer: B

Explanation:

HA Fail-safe mode is a feature that allows the Citrix ADCs to continue processing traffic even if both nodes become unavailable or fail a health check. This feature can be configured on each Citrix ADC independently, and it is recommended to enable it on both nodes for maximum availability. If HA Fail-safe mode is disabled on one node, that node will not process any traffic if it becomes unavailable or fails a health check, and it will not fail over to the other node. This could result in a loss of service for the business websites. Therefore, the correct answer is B.

NEW QUESTION # 53

Scenario: A Citrix Administrator suspects an attack on a load balancing virtual server. The administrator needs to restrict access to the load balancing virtual server (192.168.100.25) for 10 minutes.

Which Access Control List (ACL) will help to accomplish this requirement?

- **A. add ns acl rule1 DENY -destIP 192.168.100.25 -TTL 600**
- B. add simpleacl rule1 DENY -srcIP 192.168.100.25-TTL 600
- C. add ns acl rule1 DENY -destIP 192.168.100.25 -TTL 600000
- D. add simpleacl rule1 DENY -srcIP 192.168.100.25 -TTL 600000

Answer: A

NEW QUESTION # 54

What is the effect of the "set cs vserver vserver-CS-1 -redirectURL http://www.newdomain.com/mysite/" command?

- A. All the requests to vserver-CS-1 will be redirected to http://www.newdomain.com/mysite/.
- B. All the requests without url path /mysite/ will be redirected to http://www.newdomain.com/mysite/.
- **C. If the status of vserver-CS-1 is DOWN, then users will be redirected to http://www.newdomain.com/mysite/.**
- D. If the vserver-CS-1 encounters high connection rate, then users will be redirected to http://www.newdomain.com/mysite/.

Answer: C

Explanation:

The redirectURL parameter of the set cs vserver command specifies the URL where the user requests are redirected if the status of the content switching virtual server is DOWN1. This parameter is used for configuring backup servers or displaying maintenance messages1.

NEW QUESTION # 55

Which Front-End Optimization (FEO) action can a Citrix Administrator use to achieve the results shown in the screenshots?
Click the Exhibit button to view the screenshots.

  </body>
</html>
```

- A. Rearrange CSS
- B. Move CSS to head
- C. Truncate CSS
- D. Inline CSS**

Answer: D

Explanation:

Explanation

Inline CSS is a FEO action that replaces external CSS files with inline CSS code in the HTML document. This reduces the number of HTTP requests and improves the page load time. The screenshots show that the HTML code in the second snippet has no external CSS file linked, unlike the first snippet.

Therefore, the correct answer is B. Inline CSS12.

Some additional information:

* FEO stands for Front-End Optimization, which is a feature of Citrix Application Delivery Management (ADM) that optimizes web pages for faster delivery and better user experience3.

* FEO actions are rules that modify the HTML, CSS, JavaScript, and images of a web page to improve its performance. FEO actions can be applied globally or to specific web pages based on policies4.

* Other FEO actions include Truncate CSS, which removes unused CSS selectors and properties; Move CSS to head, which moves the CSS code to the head section of the HTML document; and Rearrange CSS, which reorders the CSS code to avoid rendering delays4.
