Palo Alto Networks Cloud Security Professional Sample Questions (Q101-Q106):

NEW QUESTION # 101

How does assigning an account group to an administrative user on Prisma Cloud help restrict access to resources?

- A. It restricts access to all resources and data within the cloud account.
- B. It restricts access only to certain types of resources within the cloud account.
- **C. It restricts access only to the resources and data that pertains to the cloud account(s) within an account group.**
- D. It does not restrict access to any resources within the cloud account.

Answer: C

Explanation:

In Prisma Cloud, assigning an administrative user to an account group is a way to implement the principle of least privilege by restricting the user's access to a specific subset of resources and data. Account groups are logical collections of cloud accounts, and by associating an administrative user with a particular account group, their access is limited to only those resources and data

associated with the cloud accounts within that group. This mechanism ensures that users have access only to the information and resources necessary for their role or tasks, enhancing security by minimizing the potential for unauthorized access or actions within the cloud environment.

NEW QUESTION # 102

Which three steps are involved in onboarding an account for Data Security? (Choose three.)

- A. Create a S3 bucket
- B. Enable Flow Logs
- C. Create a Cloudtrail with SNS Topic
- D. Enter the RoleARN and SNSARN
- E. Create a read-only role with in-line policies

Answer: A,C,D

Explanation:

Onboarding an account for Data Security involves several critical steps to ensure comprehensive coverage and effective monitoring. The steps involved include B. Create a Cloudtrail with SNS Topic to track and manage API calls and relevant notifications, D. Enter the RoleARN and SNSARN to provide necessary access and integration points for data security functions, and E. Create a S3 bucket which serves as a storage solution for logging and data capture essential for security analysis.

NEW QUESTION # 103

Which two information types cannot be seen in the data security dashboard? (Choose two).

- A. Total objects
- B. Object content
- C. Object Data Profile by Region
- D. Bucket owner
- E. Top Publicly Exposed Objects By Data Profile

Answer: B,D

Explanation:

The data security dashboard in Prisma Cloud provides a comprehensive overview of the security posture related to cloud data storage. However, certain information types, such as the identity of the bucket owner and the actual content within an object, are not typically displayed on such dashboards. This is because the dashboard focuses more on aggregated data profiles, exposure levels, and compliance-related information rather than individual ownership details or the specific content of objects, which may require separate detailed analysis or are managed through different security mechanisms.

NEW QUESTION # 104

Put the steps involved to configure and scan using the IntelliJ plugin in the correct order.

□

Answer:

Explanation:

□
Explanation:

- * Install IntelliJ IDE
- * Add Prisma Cloud plugin
- * Configure the Prisma Cloud plugin
- * Scan using the Prisma Cloud plugin

To configure and use the Prisma Cloud plugin for scanning within the IntelliJ Integrated Development Environment (IDE), you must follow a series of steps in a specific order to ensure proper setup and functionality.

Firstly, you need to have the IntelliJ IDE installed on your system. Without the IDE, you cannot add or use the Prisma Cloud plugin, as it is designed to work within this development environment.

Secondly, after installing the IntelliJ IDE, you add the Prisma Cloud plugin. This involves navigating to the plugin marketplace within IntelliJ and selecting the Prisma Cloud plugin for installation.

Once the plugin is added to your IntelliJ IDE, the next step is to configure the Prisma Cloud plugin. This configuration may include

setting up your Prisma Cloud credentials, specifying your scan options, and other settings that tailor the plugin's functionality to your needs.

Finally, after the plugin is installed and configured, you can proceed to scan your project using the Prisma Cloud plugin. This will check your code against security policies and compliance standards, providing feedback and recommendations for any identified issues.

Following these steps ensures that the Prisma Cloud plugin is properly integrated into your IntelliJ development workflow, allowing for continuous security and compliance checks as part of the development process.

NEW QUESTION # 105

Which intensity setting for anomaly alerts is used for the measurement of 100 events over 30 days?

- A. High
- **B. Medium**
- C. Low
- D. Very High

Answer: B

Explanation:

In the context of setting anomaly alert intensities in Prisma Cloud, an intensity setting of "Medium" could be used for the measurement of 100 events over 30 days. This setting indicates a moderate level of anomaly detection sensitivity, which is suitable for environments where there is a need to balance between detecting potential security issues and minimizing false positives.
