DumpTOP의 Salesforce인증 Analytics-Admn-201시험덤프는 고객님의 IT자격증을 취득하는 꿈을 실현시켜 드리는 시험패스의 지름길입니다. Salesforce인증 Analytics-Admn-201덤프에는 실제시험문제의 거의 모든 문제를 적중하고 습니다. DumpTOP의 Salesforce인증 Analytics-Admn-201덤프가 있으면 시험패스가 한결 간편해집니다.

Salesforce Analytics-Admn-201 시험요강:

주제	소개
주제 1	• Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
주제 2	• Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
주제 3	• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
주제 4	• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.

주제 5	Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.

시험패스 가능한 Analytics-Admn-201시험대비 최신 덤프공부자료 최신 덤프문제

DumpTOP 제공 Salesforce Analytics-Admn-201시험덤프자료가 광범한 시험준비인사들의 찬양을 받은 지 하루이틀일 이 아닙니다. 이렇게 많은 분들이 DumpTOP 제공 Salesforce Analytics-Admn-201덤프로 시험을 통과하여 자격증을 취득하였다는 것은 DumpTOP 제공 Salesforce Analytics-Admn-201덤프가 믿을 만한 존재라는 것을 증명해드립니다. 덤프에 있는 문제만 열심히 공부하시면 시험통과 가능하기에 시간도 절약해줄 수 있어 최고의 믿음과 인기를 받아왔습니다. Salesforce Analytics-Admn-201 시험을 봐야 하는 분이라면 DumpTOP를 한번 믿어보세요. DumpTOP 도움으로 후회없이 멋진 IT전문가로 거듭날 수 있을 것입니다.

최신 Salesforce Administrator Analytics-Admn-201 무료 샘플문제 (Q40-Q45):

질문 # 40

What two types of users can sign in to Tableau Server and edit the permissions for a workbook in a project, when permissions are NOT set to Locked to the project? (Choose two.)

- A. Users set to Project Leader for the workbook's project
- B. Users that have the project and workbook Viewer role
- C. The workbook's owner
- D. Users that have the workbook Interactor role

정답: A,C

설명:

Editing permissions on a workbook in Tableau Server depends on the user's role and the project's permission settings. Since permissions are not locked (i.e., "Managed by Owner"), let's dissect who can edit them:

* Permission Model:

* Not Locked: Owners of content (workbooks, data sources) can set permissions, and Project Leaders can override at the project level.

* Site Roles: Define maximum capabilities (e.g., Viewer, Explorer, Creator).

* Capabilities: "Set Permissions" is explicit-only certain users get it.

* Option C (The workbook's owner): Correct.

* Details: The owner (typically the publisher) has full control over their workbook when permissions are Managed by Owner:

* How: In the UI, go to Content > Workbooks > Actions > Permissions-owners can edit rules (e.g., grant Editor to a group).

* Site Role: Minimum of Explorer (can publish) or Creator to publish, ensuring "Set Permissions" capability.

* Why: Ownership inherently includes permission management unless locked.

* Option D (Users set to Project Leader for the workbook's project): Correct.

* Details: Project Leaders are assigned via Content > Projects > Actions > Permissions > Set Project Leader:

* Power: Can edit permissions for all content in the project, even if not the owner.

* Site Role: Requires Site Administrator or Server Administrator (Creator/Explorer variants suffice).

* Why: Overrides ownership in Managed by Owner mode-ensures project-level governance.

* Option A (Users with project and workbook Viewer role): Incorrect.

* Why: Viewer role (site-level) limits users to viewing-lacks "Set Permissions" capability, regardless of project/workbook rules.

* Option B (Users with workbook Interactor role): Incorrect.

* Why: "Interactor" isn't a standard role-likely a misnomer for Explorer or Viewer with interaction permissions (e.g., Filter). No permission-editing rights exist here.

Why This Matters: Knowing who can edit permissions prevents access control gaps-crucial for collaborative or regulated environments.

Reference: Tableau Server Documentation - "Permissions" (<https://help.tableau.com/current/server/en-us/permissions.htm>), "Project Leader Permissions" (https://help.tableau.com/current/server/en-us/permissions_project_leader.htm).

질문 # 41

You activate the same Tableau Server product key on three installations for Dev, Test, and Production. You plan to move the Test environment to new hardware. What is the recommended workflow for managing the product key?

- A. Deactivate the product key on the existing Test environment, and then install and activate Tableau Server on the new hardware
- B. Install and activate Tableau Server on the new hardware, and then run the following script in the old environment: `tableau-server-obliterate.cmd -y -y -y`
- C. Install and activate Tableau Server on the new hardware, and then deactivate it on the old hardware
- D. Install and activate Tableau Server on the new hardware and keep the existing Test environment as a backup

정답: A

설명:

Tableau Server's licensing ties product keys to specific machines. Moving an environment requires managing activations to stay compliant. Let's break this down:

* Licensing Rules:

* A product key can be activated on multiple machines (e.g., Dev, Test, Prod), but only up to the licensed limit (typically 3 for such setups).

* Deactivation frees the key for reuse elsewhere.

* Recommended Workflow:

* Deactivate first: Use `tsm licenses deactivate` on the old Test machine to release the key.

* Then activate: Install on the new hardware and activate with `tsm licenses activate -k <key>`.

* Why: Ensures compliance and avoids activation conflicts (e.g., exceeding the key's limit).

* Option B (Deactivate on Test, then install/activate on new hardware): Correct.

* Steps:

* On old Test: `tsm licenses deactivate`.

* Install Tableau Server on new hardware.

* On new Test: `tsm licenses activate -k <key>`.

* Benefit: Clean, compliant transfer-preserves license integrity.

* Option A (Activate new, then deactivate old): Incorrect.

* Risk: If the key's limit is reached (e.g., 3 activations), the new activation fails until deactivation occurs. Order matters.

* Option C (Activate new, keep old as backup): Incorrect.

* Issue: Exceeds license limit (4 activations) and risks non-compliance. Backup requires deactivation or a separate key.

* Option D (Activate new, obliterate old): Incorrect.

* Details: `tableau-server-obliterate.cmd` wipes the entire install (data, config)-overkill and doesn't formally deactivate the key via TSM, potentially leaving licensing inconsistent.

Why This Matters: Proper license management prevents activation errors and ensures legal use across environments.

Reference: Tableau Server Documentation - "Manage Product Keys" (https://help.tableau.com/current/server/en-us/license_manage.htm).

질문 # 42

What are two intervals when Tableau Server verifies if data conditions for data-driven alerts are true? (Choose two.)

- A. Whenever extracts in the related workbook are refreshed
- B. Every 10 minutes
- C. Whenever a new extract is published
- D. Every 60 minutes

정답: A,D

설명:

Data-driven alerts notify users when data meets conditions (e.g., sales > \$10K). Let's examine when Tableau checks these:

- * Alert Mechanics:
- * Enabled per site (Settings > General > Data-Driven Alerts).
- * Backgrounder evaluates conditions against extract data.
- * Check Intervals: Configurable via tsm configuration set -k dataAlerts.checkIntervalInMinutes (default: 60 minutes).
- * Refresh Trigger: Also checks post-extract refresh for immediate updates.
- * Option A (Every 60 minutes): Correct.
- * Details: Default interval-Backgrounder polls every hour to evaluate alert conditions.
- * Config: Adjustable (e.g., -v 30 for 30 minutes).
- * Option D (Whenever extracts in the related workbook are refreshed): Correct.
- * Details: An extract refresh updates the data, triggering an immediate alert check to catch changes promptly.
- * Why: Ensures timely notifications without waiting for the next poll.
- * Option B (Every 10 minutes): Incorrect.
- * Why: Not the default-possible via config, but not standard.
- * Option C (Whenever a new extract is published): Incorrect.
- * Why: Publishing creates the extract; alerts trigger on refreshes or polling, not initial publication.

Why This Matters: Timing affects alert responsiveness-balancing frequency and server load is key.

Reference: Tableau Server Documentation - "Data-Driven Alerts" (https://help.tableau.com/current/server/en-us/data_alerts.htm).

질문 # 43

What should you do to disable table recommendations for popular data sources and tables to users?

- A. Publish data sources only to projects with permissions locked to the project
- B. Use the command: tsm configuration set -k recommendations.enabled -v false
- **C. Disable the option using the site Settings page**
- D. Disable the option using the server Settings page

정답: C

설명:

Table recommendations in Tableau Server suggest popular tables and data sources to users when they create new content in the web authoring environment. This feature is enabled by default but can be disabled at the site level.

Option A (Disable the option using the site Settings page): Correct. A site administrator can disable table recommendations by navigating to the site's Settings > General page in the Tableau Server web interface and unchecking the option "Enable table recommendations." This prevents users on that site from seeing these suggestions, offering a straightforward UI-based solution.

Option B (Use the command: tsm configuration set -k recommendations.enabled -v false): Incorrect. There is no recommendations.enabled key in the TSM configuration settings. This feature is managed per site, not server-wide via TSM.

Option C (Publish data sources only to projects with permissions locked): Incorrect. Locking permissions restricts access but doesn't disable the recommendation feature itself. Users with access would still see recommendations.

Option D (Disable the option using the server Settings page): Incorrect. Table recommendations are a site-specific setting, not a server-wide setting. The server Settings page (via TSM) controls global configurations, not this feature.

Reference: Tableau Server Documentation - "Manage Site Settings" (https://help.tableau.com/current/server/en-us/site_settings.htm).

질문 # 44

Your deployment of Tableau Server uses Active Directory authentication. What statement correctly describes the process of importing a group from Active Directory?

- A. If an imported group contains any users that have Tableau Server accounts, their site role will be changed to match the site role specified during the import
- B. You can change the name of a group during import, although this will not change the group's name in Active Directory
- C. Importing a group from Active Directory requires a .csv file that lists user IDs
- **D. New users created as a result of importing a group are assigned the site role specified during the import**

정답: D

설명:

Importing an AD group into Tableau Server syncs user management-let's analyze the process and options:

* AD Group Import Process:

* How: In the UI (Users > Groups > Add Group > Active Directory), enter the AD group name, set a site role, and sync.

* Behavior:

* Existing Users: If a user is already in Tableau Server, their site role remains unchanged unless manually adjusted-sync applies the minimum role only if it upgrades access.

* New Users: Added to Tableau with the site role specified during import.

* Config: Requires AD authentication enabled in TSM.

* Option D (New users created are assigned the site role specified during import): Correct.

* Details: When importing (e.g., "SalesTeam" group, site role: Explorer):

* New users get Explorer.

* Existing users keep their role unless it's below Explorer (e.g., Unlicensed # Explorer).

* Why: Ensures consistent onboarding-new users align with the group's intended access.

* Option A (Existing users' roles change to match import): Incorrect.

* Why: Existing roles persist unless lower than the minimum-e.g., Viewer stays Viewer if import sets Explorer, but Unlicensed upgrades. Not a full overwrite.

* Option B (Requires a .csv file): Incorrect.

* Why: AD import uses live sync via LDAP-no .csv needed (that's for local auth imports).

* Option C (Change group name during import): Incorrect.

* Why: The AD group name is fixed-you can't rename it in Tableau during sync (it mirrors AD).

Post-import renaming is possible but not part of the process.

Why This Matters: Accurate AD sync ensures seamless user management-missteps can disrupt access or licensing.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" (https://help.tableau.com/current/server/en-us/groups_sync.htm).

질문 # 45

.....

IT전문가들이 자신만의 경험과 끊임없는 노력으로 작성한 Salesforce Analytics-Admn-201덤프에 관심이 있는데 선풍 구매결정을 내릴수없는 분은Salesforce Analytics-Admn-201덤프 구매 사이트에서 메일주소를 입력한후 DEMO를 다운로드 받아 문제를 풀어보고 구매할수 있습니다. 자격증을 많이 취득하면 좁은 취업문도 넓어집니다. Salesforce Analytics-Admn-201 덤프로Salesforce Analytics-Admn-201시험을 패스하여 자격증을 쉽게 취득해보지 않으실래요?
