すべての働く人は、Chrome-Enterprise-Administratorがこの分野で支配的な人物であり、また彼らのキャリアに役立つことを知っています。Chrome-Enterprise-Administrator信頼性の高い試験ブートキャンプが試験に合格し、資格証明書を取得するのに役立つ場合、より良いキャリア、より良い人生を得ることができます。私たちの研究Chrome-Enterprise-Administratorガイド資料は、最新のChrome-Enterprise-Administratorテストの質問と回答のほとんどを網羅しています。確かにこの分野で何か違うことをしようと決心しているなら、役に立つ認定はあなたのキャリアの足がかりになるでしょう。

Google Chrome-Enterprise-Administrator 認定試験の出題範囲：

トピック	出題範囲

トピック 1	<ul style="list-style-type: none"> • Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.
トピック 2	<ul style="list-style-type: none"> • Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.
トピック 3	<ul style="list-style-type: none"> • Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.
トピック 4	<ul style="list-style-type: none"> • Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.
トピック 5	<ul style="list-style-type: none"> • Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.

あなたはいい仕事を見つけたい場合、Chrome-Enterprise-Administrator参考資料を選択してください。多くのお客様はChrome-Enterprise-Administrator試験参考書を選択したら、Chrome-Enterprise-Administrator認定試験資格証明書を取得しました。また、Googleのサービスもいいし、24時間のサービスを提供できます。だから、それは最もいい資料です。

Google Professional Chrome Enterprise Administrator Certification Exam 認定 Chrome-Enterprise-Administrator 試験問題 (Q28-Q33):

質問 # 28

A company uses Chrome Enterprise Core to manage Chrome browsers for its employees and contractors who share devices They need a way to ensure the following:

- * Full-Time Employees (FTEs) can only see and use extensions assigned to them
- * Contractors can only see and use extensions assigned to them
- * Both FTEs and contractors have access to a set of shared extensions

How can the Chrome administrator configure Chrome Enterprise Core to achieve this'?

- A. Create separate groups in the Google Admin Console for FTEs and Contractors. Assign extensions to respective groups based on their needs
- B. Create Organizational Units (OUs) for Shared devices, assign shared extensions to the OU. Create a separate group in the Google Admin Console for FTEs. Assign extensions to the group based on their needs
- C. Create Organizational Units (OUs) for Shared devices, assign shared extensions to the OU. Use Group Policy Objects to assign specific extensions by user group
- D. Ask users to install all the extensions they need on the shared device

正解: B

解説:

The most effective way to manage extensions in this scenario is to use a combination of OUs and groups.

Create an OU for the shared devices and force-install the shared extensions at this OU level. Then, create separate user groups for FTEs and Contractors in the Google Admin console and force-install their specific extensions to these groups. User group policies have a higher precedence than OU policies, ensuring the correct extensions are available to each user type when they sign in to the shared devices. Option A mentions Group Policy Objects, which are for Windows environments and less relevant in a cloud-managed scenario across potentially different OSes. Option B doesn't address the shared device aspect effectively. Option C is not a managed approach.

質問 # 29

An organization is deploying 50 new devices which will be managed by a Mobile Device Management solution Which method should be used to enroll the Chrome browser on those devices into Chrome Enterprise Core?

- A. Use Google Admin to generate an enrollment token and distribute it using mobile device management software
- B. Generate a single device enrollment token and email it to all users, instructing them to enroll their devices individually
- C. Use Google Admin to generate 50 individual device registration keys and distribute them using mobile device management software
- D. Use Google Admin console bulk enrollment feature to generate a set of unique tokens, and then distribute them via secure file sharing platform

正解: A

解説:

The study guide emphasizes using enrollment tokens generated in the Google Admin console for enrolling browsers. When using an MDM solution, the most efficient and recommended method is to generate a single enrollment token and then deploy it to the devices through the MDM software. This allows for automated and scalable enrollment. Bulk enrollment features in the Admin console are typically for direct enrollment, not through MDM. Individual tokens or keys would be inefficient for a large deployment.

質問 # 30

A company is reviewing the permissions of extensions that are popular among employees The security team wants to make sure all extensions in the environment have these capabilities disabled:

* Modify to internal home page: `internal.acme.com`

* Access to the storage

* Access to history

Which actions should be taken in the company default extension Permissions and URLs fields to meet the security team's requirements?

- A. Add `*.acme.com` to runtime blocked hosts; Disable storage permission; Disable history permission
- B. Add `internal.acme.com` to runtime blocked hosts; Disable storage permission; Disable history permission
- C. Add `internal.acme.com` to runtime blocked hosts; Enable storage permission; Enable history permission
- D. Add `*.acme.com` to runtime blocked hosts; Enable storage permission; Enable history permission

正解: A

解説:

To prevent extensions from modifying the internal homepage, the administrator should add `*.acme.com` to the "Runtime blocked hosts" list. The wildcard `*` ensures that any attempt to access or modify this domain by an extension will be blocked at runtime. Additionally, to disable access to storage and history, the administrator needs to explicitly disable the "Storage" and "History" permissions within the extension management settings. Therefore, the correct combination is to block the host and disable the permissions.

質問 # 31

An administrator is modifying a policy at the top-level organizational unit (OU), and there is an OU below that should not accept this modification What can the administrator do to be certain of this*?

- A. Set policy precedence to Child > Parent
- B. Turn off inheritance for all policies

- C. Set the policy to locally applied at the parent OU
- **D. Set the policy to locally applied at the child OU**

正解: D

解説:

To prevent a child OU from inheriting a policy set at a parent OU, the administrator needs to configure the policy within the child OU itself and set its inheritance status to "Locally applied." This explicitly overrides the inherited policy from the parent with a specific setting for the child OU. Setting it to locally applied at the parent would not prevent inheritance. Turning off inheritance entirely might not be desired for other policies, and "Child > Parent" is the default precedence when inheritance is enabled.

質問 # 32

An organization is migrating its management from Group Policy to Chrome Enterprise Core. When enrolling the browser into Chrome Enterprise Core, what will happen to conflicting policies on Windows when using the default order of precedence?

- A. OS User policies will be ignored in favor of the Cloud User policies
- B. Machine Policy will be ignored if the token was deployed through Group Policy
- **C. Machine Policies will be ignored in favor of cloud machine policy**
- D. Cloud Machine policies will be ignored in favor of the Machine Policy

正解: C

解説:

By default, when a Chrome browser on a Windows device is enrolled in Chrome Enterprise Core, cloud-based machine policies will take precedence over locally configured machine policies (Group Policy). This ensures that the centrally managed cloud policies are enforced.

質問 # 33
