ขอเชิญอบรมเชิงปฏิบัติการ

หลักสูตร How to create online exam with WU e-Learning

วันศุกร์ที่ 7 กุมภาพันธ์ 2568
เวลา 09.00-12.00 น.

ห้อง E-Testing 2
อาคารคอมพิวเตอร์

รองรับทักษะดิจิทัลสำหรับบุคลากรภาครัฐ
DLIT400 ประยุกต์ใช้เครื่องมือดิจิทัลเพื่อการทำงาน

กลุ่มเป้าหมาย
อาจารย์และนักวิชาการ

วัตถุประสงค์
เพื่อให้มีความรู้ความเข้าใจการใช้งานระบบบริหารจัดการการเรียนการสอนในระบบออนไลน์ WU e-Learning บนแพลตฟอร์ม Moodle LMS อย่างมีประสิทธิภาพ

เนื้อหาหลักสูตร

- ✓ รู้จักประเภทของข้อสอบในระบบ WU e-Learning บนแพลตฟอร์ม Moodle
- ✓ การสร้างข้อสอบประเภทต่าง ๆ ในคลังข้อสอบ
- ✓ การเตรียมไฟล์สำหรับนำเข้าข้อสอบ
- ✓ การนำเข้าข้อสอบเข้าคลังข้อสอบ
- ✓ การใช้ข้อสอบในคลังข้อสอบ
- ✓ การนำเข้าข้อสอบจากรายวิชาเดิม

มอบประกาศนียบัตรสำหรับเข้าอบรมแก่ผู้ผ่านการประเมิน

WGU Cloud-Deployment-and-Operations 認定試験の出題範囲：

トピック	出題範囲
トピック 1	Implementing Cloud Security and Compliance: This section of the exam measures skills of Cloud Engineers and covers the use of AWS security tools to protect data and infrastructure. Candidates must demonstrate awareness of compliance needs and the ability to apply protective controls that align with industry and organizational standards.
トピック 2	Automating Cloud Provisioning and Maintenance: This section of the exam measures skills of Cloud Operations engineers and covers the ability to automate provisioning tasks and ongoing maintenance activities. It emphasizes using automation tools to streamline cloud resource creation and lifecycle management. Students must demonstrate they can apply automation to maintain efficient cloud operations.

トピック 3	• Monitoring, Logging, and Issue Remediation: This section of the exam measures skills of Cloud Engineers and covers responding to issues identified through AWS monitoring and logging tools. Candidates must show they can interpret system outputs, identify problems, and take corrective actions to maintain smooth cloud operations.
トピック 4	• Ensuring Scalability, Elasticity, and Backup Readiness: This section of the exam measures skills of Cloud Operations Specialists and covers implementing AWS features that support scalability, elasticity, and backup readiness. It focuses on enabling cloud systems to handle fluctuating workloads while maintaining continuity and ensuring critical data remains recoverable.
トピック 5	• Cloud Service Deployment and Management: This section of the exam measures skills of Cloud Engineers and covers the technical knowledge required to deploy, manage, and operate cloud services. It focuses on understanding stability, scalability, backup processes, recovery methods, and general deployment practices. Candidates are expected to show they can handle provisioning, monitoring, and connectivity tasks needed to support cloud environments.

WGU Cloud Deployment and Operations 認定 Cloud-Deployment-and-Operations 試験問題 (Q43-Q48):

質問 # 43

(A company has implemented multifactor authentication (MFA) for access to its AWS tenant. Which API call is needed to perform MFA before accessing a resource?)

- A. DecodeAuthorizationMessage
- **B. GetSessionToken**
- C. GetCallerIdentity
- D. GetFederationToken

正解: B

解説:

The 'GetSessionToken' API call is needed to perform MFA before accessing a resource, as it generates temporary security credentials for an IAM user after MFA validation. This ensures secure access to AWS resources. The WGU Cloud Deployment and Operations Study Guide (Section 6.2, IAM and MFA) states,

"The 'GetSessionToken' API is used with MFA to obtain temporary credentials, requiring a valid MFA code to authenticate the user before resource access is granted." GetCallerIdentity, GetFederationToken, and DecodeAuthorizationMessage serve different purposes and do not handle MFA authentication.

質問 # 44

(Which AWS service is used to provide remote workers with secure access to AWS resources?)

- **A. Client VPN**

- B. Transit Gateway
- C. NAT instance
- D. Network Firewall

正解: A

解説:

Comprehensive and Detailed Explanation From Exact Extract:

AWS Client VPN is used to provide remote workers with secure access to AWS resources by establishing a VPN connection to the VPC, ensuring encrypted access to private networks. The WGU Cloud Deployment and Operations Study Guide (Section 3.2, Client VPN) states, "Client VPN enables secure remote access to AWS resources within a VPC, using mutual authentication and encryption to protect data for remote workers." Transit Gateway manages inter-VPC routing, Network Firewall filters traffic, and NAT instances handle outbound internet access, none of which are designed for remote worker access.

質問 # 45

(A company manages a containerized application by manually deploying AWS compute instances. Which solution should be used to optimize the cost of the application?)

- A. Aurora
- B. RDS
- C. Fargate
- D. EFS

正解: C

解説:

AWS Fargate should be used to optimize the cost of a containerized application by eliminating the need for manual instance management, as it provides serverless container orchestration that automatically scales and charges only for resource usage. The WGU Cloud Deployment and Operations Study Guide (Section 7.5, Fargate) states, "Fargate optimizes costs for containerized applications by removing the overhead of managing EC2 instances, scaling automatically, and billing based on vCPU and memory usage, reducing manual deployment expenses." Aurora, RDS, and EFS are database or storage solutions not designed for container cost optimization.

質問 # 46

(Which component should be used to configure email notifications for a trigger by Amazon Made?)

- A. CodeDeploy
- B. EventBridge
- C. Elastic Kubernetes Service
- D. Simple Queue Service

正解: B

解説:

Amazon EventBridge should be used to configure email notifications for a trigger by Amazon Made, as it can route events to targets like Amazon SNS (Simple Notification Service) for email delivery. EventBridge integrates with AWS services to handle event-driven notifications. The WGU Cloud Deployment and Operations Study Guide (Section 4.3, EventBridge) states, "EventBridge can be configured to send events from Amazon Made to SNS, enabling email notifications by subscribing an email endpoint to the SNS topic." SQS, EKS, and CodeDeploy do not support this notification configuration.

質問 # 47

(An administrator deploys an EC2 instance with the public IP address 54.18.127.233 into a newly created VPC in us-west-2. The EC2 instance must be accessible via `ec2-public-54.18.127.233.us-west-2.compute.amazonaws.com` from the internet. Which solution should be used?)

- A. Set the VPC attribute `enableDnsHostnames` to true
- B. Set the VPC attribute `enableDnsSupport` to false
- C. Assign a resource-based name to the EC2 instance

- D. Assign a resource tag to the EC2 instance

正解: A

解説:

Comprehensive and Detailed Explanation From Exact Extract:

To make the EC2 instance accessible via a public DNS hostname like ec2-public-54.18.127.233.us-west-2.

compute.amazonaws.com, the administrator must set the VPC attribute enableDnsHostnames to true. This enables the automatic assignment of public DNS hostnames to instances with public IP addresses in the VPC.

The WGU Cloud Deployment and Operations Study Guide (Section 3.2, VPC Configuration) states, "Setting enableDnsHostnames to true in the VPC configuration ensures that EC2 instances with public IPs receive a public DNS hostname (e.g., ec2-public-`<ip>`.`<region>`.compute.amazonaws.com), facilitating internet accessibility." Resource tags, disabling DNS support, and resource-based names do not enable this functionality.`</region></ip>`
