Mock Analytics-Arch-201 Exam, Reliable Analytics-Arch-201 Test Notes

Our Analytics-Arch-201 exam cram is famous for instant access to download, and you can receive the downloading link and password within ten minutes, and if you don't receive, you can contact us. Moreover, Analytics-Arch-201 exam materials contain both questions and answers, and it's convenient for you to check the answers after practicing. We offer you free demo to have a try before buying, so that you can know what the complete version is like. We offer you free update for 365 days for Analytics-Arch-201 Exam Dumps, so that you can obtain the latest information for the exam, and the latest version for Analytics-Arch-201 exam dumps will be sent to your email automatically.

Salesforce Certified Tableau Architect Sample Questions (Q95-Q100):

NEW QUESTION # 95
What should be the focus when creating scripts for the migration of Tableau content from one server to another?

- A. Writing scripts that prioritize speed over accuracy in the migration process
- B. Designing scripts that only work in specific environments to ensure security
- C. Creating scripts that require manual intervention at each step for increased control
- D. Developing scripts that are flexible and can handle different server configurations and con-tent types

Answer: D

Explanation:
Developing scripts that are flexible and can handle different server configurations and content types Flexibility in scripts is crucial to accommodate different server configurations and various content types, ensuring a smooth and error-free migration across diverse environments. Option A is incorrect because scripts need to be adaptable to different environments, not restricted to specific ones. Option C is incorrect because accuracy is paramount in migration processes to avoid data loss or corruption. Option D is incorrect as the goal of scripting is to reduce manual intervention, not increase it.

NEW QUESTION # 96
In configuring LDAP (Lightweight Directory Access Protocol) for authentication in Tableau Server, what is an essential step to ensure successful user authentication?

- A. Allocating additional CPU resources to Tableau Server to handle the encryption and decryption of LDAP traffic
- B. Configuring Tableau Server to periodically synchronize with the LDAP server, regardless of user login attempts
- C. Specifying the correct base distinguished name (DN) and search filters in the LDAP configuration on Tableau Server
- D. Setting up a secondary LDAP server as a fallback for the primary LDAP server

Answer: C

Explanation:
Specifying the correct base distinguished name (DN) and search filters in the LDAP configuration on Tableau Server When configuring LDAP for authentication in Tableau Server, it is critical to specify the correct base distinguished name (DN) and search filters. This ensures that Tableau Server can correctly query the LDAP directory for user information and authenticate users based on the organization's user structure and policies. Option A is incorrect because periodic synchronization, while beneficial for keeping user information updated, is not critical for the initial configuration of LDAP authentication. Option C is incorrect as allocating additional CPU resources specifically for LDAP traffic is generally not necessary. Option D is incorrect because set-ting up a secondary LDAP server is more related to high availability and redundancy rather than the initial configuration of LDAP authentication.

NEW QUESTION # 97
A company is planning to migrate its Tableau Server from a Windows-based environment to Linux. What is the most important factor to consider for a successful migration?

- A. Prioritizing the migration of the user interface elements only, as they are most visible to end-users
- B. Focusing exclusively on the aesthetic differences between the Windows and Linux versions of Tableau Server
- C. Ensuring that all Tableau Server components and dependencies are compatible with the Linux operating system
- D. Transferring all data and content without assessing compatibility with the Linux environment

Answer: C

Explanation:
Ensuring that all Tableau Server components and dependencies are compatible with the Linux operating system Compatibility of server components and dependencies with Linux is crucial to ensure that the Tableau Server functions correctly after migration, avoiding any disruptions due to incompatibilities. Option A is incorrect because transferring data and content without assessing compatibility can lead to functionality issues. Option C is incorrect as focusing only on user interface elements neglects the backend and technical aspects crucial for the server's operation. Option D is incorrect because the aesthetic differences are less critical than the functional and technical compatibilities in the migration process.

NEW QUESTION # 98
In configuring a strategy to monitor Tableau Server process metrics, what is an essential aspect to include for ensuring proactive maintenance?

- A. Setting up alerts for when server processes reach their maximum capacity thresholds
- B. Conducting a manual review of server logs whenever a new Tableau version is deployed
- C. Only monitoring the most frequently used dashboards and data sources on the server
- D. Analyzing historical data once a month to identify long-term trends in server performance

Answer: A

Explanation:
Setting up alerts for when server processes reach their maximum capacity thresholds An essential aspect of a strategy to monitor Tableau Server process metrics is setting up alerts for when key server processes approach or reach their maximum capacity thresholds. This pro-active approach allows administrators to address potential issues before they impact server performance or user experience, ensuring smoother operations. Option B is incorrect as analyzing historical data monthly might miss immediate issues and emerging trends that require quicker responses. Option C is incorrect because focusing only on the most used dashboards and data sources does not provide a complete picture of server performance. Option D is incorrect because while reviewing server logs after new deployments is important, it is not a substitute for continuous monitoring of process metrics.

NEW QUESTION # 99

When managing a Tableau Server environment on a Linux system, which method is recommended for deploying automated backup scripts?

- A. Relying on a third-party cloud service to handle all backup processes
- B. Configuring the scripts to run automatically via the Tableau Server web interface
- C. Using cron jobs to schedule and execute backup scripts at regular intervals
- D. Manually initiating backup scripts through the Linux terminal as needed

Answer: C

Explanation:
Using cron jobs to schedule and execute backup scripts at regular intervals On a Linux system, cron jobs are the recommended method for deploying automated backup scripts for Tableau Server. Cron allows for the precise scheduling of scripts to run at regular intervals, ensuring consistent and automated backups without the need for manual initiation. Option A is incorrect be-cause the Tableau Server web interface does not provide a mechanism for automating server-level scripts like backups. Option C is incorrect as relying solely on a third-party cloud service for back-ups does not address the need for local script automation and management. Option D is incorrect because manual initiation is not efficient for regular maintenance tasks like backups.

NEW QUESTION # 100

......

In order to cater to different needs of our customers, we have three versions for Analytics-Arch-201 exam materials. Each version has its own feature, and you can choose the most suitable one according to your own needs. Analytics-Arch-201 PDF version supports print, if you like hard one, you can choose this version and take notes on it. Analytics-Arch-201 Online Test engine supports all electronic devices and you can also practice offline. Analytics-Arch-201 Soft test engine can stimulate the real exam environment, and you can install this version in more than 200 computers. Just have a look, there is always a version is for you.

Mock Analytics-Arch-201 Exam: https://www.prepawayexam.com/Salesforce/braindumps.Analytics-Arch-201.ete.file.html

Just use your fragmental time to learn 20-30 hours to attend the exam, and pass exam so you can get the Salesforce certification because of the Analytics-Arch-201 pass-sure torrent is high-quality, In the end please trust us we are the best actual test dumps provides not only the PrepAwayExam Analytics-Arch-201 dumps content material but also our service, In a word, you can try our free Analytics-Arch-201 study guide demo before purchasing, Salesforce Certified Tableau Architect Pdf After the researches of many years, we found only the true subject of past-year exam was authoritative and had time-validity, For your benefit, PrepAwayExam is putting forth you to attempt the free demo and Salesforce Analytics-Arch-201 Exam Dumps the best quality highlights of the item, because nobody gives this facility only the PrepAwayExam Analytics-Arch-201 Free Learning provide this facility.

Web services architectures, First, it's going be a big Analytics-Arch-201 space with Level Office expecting to have over coworkers at this location, Just use your fragmental time to learn 20-30 hours to attend the exam, and pass exam so you can get the Salesforce certification because of the Analytics-Arch-201 pass-sure torrent is high-quality.
