Our Nutanix NCP-MCA Practice Test software features various question styles and levels, so you can customize your Nutanix NCP-MCA exam questions preparation to meet your needs.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q82-Q87):

NEW QUESTION # 82
Which products or features are dependencies of Calm? (Choose two.)

- A. Block Storage IP
- B. Data Service IP
- C. Prism Central
- D. Prism Element

Answer: C,D

Explanation:
Nutanix Calm is a feature of Prism Central that enables you to automate the deployment and management of infrastructure and applications across multiple clouds. Prism Central is a centralized management plane that provides unified visibility and control over Nutanix clusters and services. Prism Element is the local management plane for each Nutanix cluster that runs the Acropolis Operating System (AOS). Both Prism Central and Prism Element are required for Nutanix Calm to function properly and access the resources and services of the Nutanix platform. References:

NEW QUESTION # 83
What minimum requirement is necessary to enable Self-Service (formerly Calm) policies for scheduling and approval tasks?

- A. Service Now Plugin
- B. Calm VM
- C. Policy Engine VM
- D. NGT Plugin

Answer: C

Explanation:
To enable Self-Service (formerly Calm) policies for scheduling and approval tasks, the minimum requirement is the Policy Engine VM. The Policy Engine VM is responsible for managing and enforcing policies, including scheduling and approval processes within Nutanix Calm.

NEW QUESTION # 84
A director would like to have an up to date Cluster Efficiency Summary report emailed on the first of every month to keep management up to date on how the cluster is being utilized.
How could a playbook be configured to satisfy this request with the least human interaction?

- A. Time Trigger > Generate Report > Email
- B. Report Trigger > Wait Until Day of Month > Email
- C. Manual Trigger > Generate Report > Email
- D. Manual Trigger > Wait Until Day of Month > Generate Report > Email

Answer: A

Explanation:
A time trigger is a type of playbook trigger that allows the user to specify a schedule for running a playbook. This trigger is useful for automating tasks that need to be performed periodically or at a specific time. A manual trigger requires the user to initiate the playbook execution manually, which is not ideal for a recurring task. A report trigger is a type of playbook trigger that allows the user to run a playbook when a specific report is generated. However, this trigger does not guarantee that the report will be generated on the first of every month, as it depends on the report settings. A wait until day of month action is a type of playbook action that pauses the playbook execution until a specified day of the month. This action is unnecessary if the playbook already has a time trigger that specifies the desired schedule.

NEW QUESTION # 85
Which field is optional when creating a Category?

- A. Task
- B. Value
- C. Purpose
- D. Name

Answer: C

Explanation:
When creating a Category in Nutanix, the "Purpose" field is optional. The mandatory fields are "Name" and
"Value". The "Purpose" field is used to provide a description or context for the category but is not required for the category creation.

NEW QUESTION # 86
An administrator receives the following error while running a script through Calm on VM:
Which two conditions could cause this issue? (Choose two.)

- A. The VM is still in the boot process.
- B. The VM port is not allowed by the firewall.
- C. There is an error in the script.
- D. The credentials have insufficient permissions.

Answer: A,B
