## Exam Analytics-DA-201 Torrent - Exam Analytics-DA-201 Simulations

It is not hard to find that there are many different kinds of products in the education market now. It may be difficult for users to determine the best way to fit in the complex choices. We can tell you with confidence that the Analytics-DA-201 study materials are

superior in all respects to similar products. First, users can have a free trial of Analytics-DA-201 Learning Materials, to help users better understand the Analytics-DA-201 study materials. If the user discovers that the product is not appropriate for him, the user can choose another type of learning material.

## Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>SAP Clean Core Extensibility and ABAP Cloud: This part of the exam targets the SAP S</li> <li>4HANA Technical Consultant and covers concepts of clean core extensibility using ABAP in the cloud. The focus is on in-app and side-by-side extensibility techniques, ensuring that custom code complies with cloud-readiness principles and does not compromise the upgrade stability of core systems.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Object-Oriented Design: This section of the exam evaluates the SAP ABAP Cloud Developer's understanding of object-oriented principles in the ABAP context. It focuses on class-based programming, inheritance, interfaces, and polymorphism, all crucial for building modular and maintainable ABAP cloud applications.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S</li> <li>4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.</li> </ul>

## Salesforce Certified Tableau Data Analyst Sample Questions (Q120-Q125):

### NEW QUESTION # 120

You have a data source that contains the following columns.

Name	Data Type
Order Date	Date
Region	String
Sales	Number (decimal)

You want to filter regions based on the highest sales. Users must be able to specify the number of regions shown.

Which three actions should you perform in order? (Place the three correct options in order. Use the arrows to move Options to Answer Area.

Use Answer Area arrows to re-order the options.)

The screenshot shows a Tableau interface with two main sections: 'Options' on the left and 'Answer Area' on the right. The 'Options' section contains seven items, each with a right-pointing arrow icon: 'Drag Sales to the Filters shelf.', 'Drag Order Date to the Filters shelf.', 'Configure a Top filter by field. Use Param1 and filter by the sum of Sales.', 'Select Range of Values, and then click OK.', 'Create an integer data type parameter named Param1.', 'Drag Region to the Filters shelf.', and 'Configure a Top filter by formula by using Param1.'. The 'Answer Area' section contains a 'salesforce' logo and two circular arrows (one pointing up, one pointing down) for re-ordering the selected options.

**Answer:**

Explanation:

Explanation:

To filter regions based on the highest sales and allow users to specify the number of regions shown, you should perform these actions in order:

Answer area:

- \* Create an integer data type parameter named Param1.
- \* Drag Region to the Filters shelf.
- \* Configure a Top filter by field. Use Param1 and filter by the sum of Sales.

To create a dynamic filter that lets users choose the number of regions to display, you need to use a parameter and a top filter. A parameter is a user-defined variable that can be used in calculations, filters, and reference lines. A top filter is a type of filter that shows only the top or bottom N values based on a specified field or expression.

In this question, you want to filter regions based on the highest sales. You also want users to be able to specify the number of regions shown. To achieve this, you need to follow these steps:

- \* First, you need to create an integer data type parameter named Param1. This parameter will allow users to enter a number that will determine how many regions to show. You can create a parameter by right-clicking on the Data pane and selecting Create Parameter. Then, you need to specify the name, data type, current value, and allowable values for the parameter. In this case, you can choose Integer as the data type, 10 as the current value, and All as the allowable values. You also need to show the parameter control by right-clicking on the parameter and selecting Show Parameter Control. This will display a slider or a text box where users can enter or adjust the parameter value.
- \* Next, you need to drag Region to the Filters shelf. This will open the Filter dialog box, where you can choose how to filter the Region field. You can filter by general, wildcard, condition, or top. In this case, you want to filter by top, so you need to select the Top tab.
- \* Finally, you need to configure a top filter by field. Use Param1 and filter by the sum of Sales. This will filter the Region field by showing only the top N regions based on the sum of Sales, where N is the value of the parameter Param1. You can configure a top filter by field by selecting By field in the Top tab, then choosing the parameter Param1 from the drop-down list, and selecting the aggregation function Sum and the field Sales from the other drop-down lists. This will create a filter expression that looks like this: Top Param1 by SUM(Sales).

By following these steps, you will create a filter that shows only the regions with the highest sales, and allows users to change the number of regions shown by adjusting the parameter value.

### NEW QUESTION # 121

You have a dataset that has four fields named Category, Profit, Sales, and Customer Name. You need to create the following visualization.

Answer Area

salesforce

trainingquiz.com

Sales: Color on the Marks card  
Columns  
Detail on the Marks card  
Rows

Profit: Color on the Marks card  
Columns  
Detail on the Marks card  
Rows

Customer Name: Color on the Marks card  
Columns  
Detail on the Marks card  
Rows

Category: Color on the Marks card  
Columns  
Detail on the Marks card  
Rows

**Answer:**

Explanation:

salesforce

trainingquiz.com

Sales: Color on the Marks card  
Columns  
Detail on the Marks card  
Rows

Profit: Color on the Marks card  
Columns  
Detail on the Marks card  
Rows

Customer Name: Color on the Marks card  
Columns  
Detail on the Marks card  
Rows

Category: Color on the Marks card  
Columns  
Detail on the Marks card  
Rows

Explanation:

Sales: B. Columns

Profit: D. Rows

Customer Name: C. Detail on the Marks card

Category: A. Color on the Marks card

To create the visualization, you need to drag Sales to Columns, Profit to Rows, Customer Name to Detail on the Marks card, and Category to Color on the Marks card. This will create a scatter plot that shows the relationship between Sales and Profit for each Customer Name, with different colors for each Category.

### NEW QUESTION # 122

You use a quick table calculation to calculate the moving average of a measure named Sales.

You need to calculate the moving averages of the last three years.

Which setting should you change in the Table Calculation dialog box? {Click the appropriate Option in the Answer Area}

QUESTION

Answer:

Explanation:

Answer Area

Explanation:

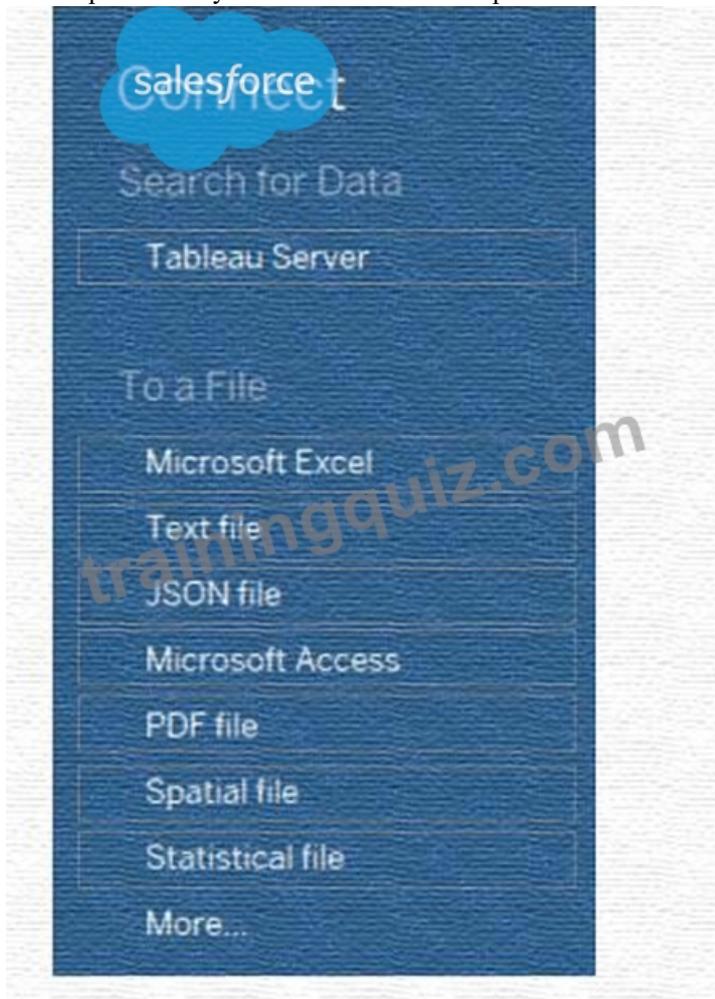

**NEW QUESTION # 123**

You receive a tab-delimited data file name sales.tsv.

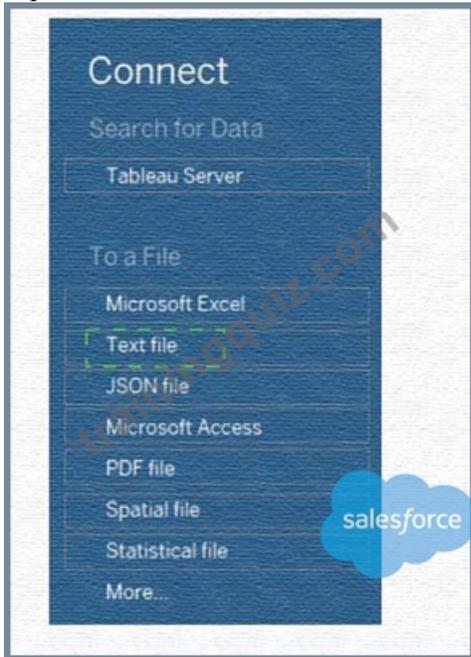

You need to connect to the file.

Which option should you select in Tableau Desktop?

**Answer:**

Explanation:

Explanation:

To connect to a tab-delimited data file named sales.tsv, you should select the option To a File > Text file in Tableau Desktop. This option will allow you to browse and select the file from your local or network drive and connect to it as a data source. You can then specify the text file properties, such as the delimiter, the text qualifier, and whether the first row contains column names. You can also join, union, or blend the data with other data sources if needed. References:
