## Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q310-Q315):

### NEW QUESTION # 310

Which of the following best describes the purpose of the MITRE ATT&CK; Matrix?

- A. To map vulnerabilities and exposures in computer systems
- B. To track the global distribution of cyber threat actors
- **C. To provide a standardized way to categorize cyber threat tactics and techniques**
- D. To analyze the impact of cyber threats on critical infrastructure

**Answer: C**

Explanation:

The MITRE ATT&CK; Matrix provides a comprehensive framework that categorizes various tactics, techniques, and procedures (TTPs) used by cyber threat actors. It enables organizations to understand how different attackers operate and helps in developing effective cybersecurity defenses and detection mechanisms.

### NEW QUESTION # 311

Which of the following strategies is recommended for managing communication proactively after an event?

- A. Keeping antivirus software up to date
- **B. Conducting a forensic analysis**
- C. Regularly backing up data
- D. Implementing multi-factor authentication

**Answer: B**

Explanation:

Conducting a forensic analysis is a recommended strategy for managing communication proactively after an event. When a security incident occurs, it is essential to investigate the nature of the incident, determine its impact, and identify the root cause. Conducting a forensic analysis helps uncover valuable information such as the method of attack, affected systems, and potential weaknesses that can be addressed to prevent similar incidents in the future. This proactive approach facilitates the development of a more robust security posture.

### NEW QUESTION # 312

Which network security concept focuses on limiting network access based on user roles and responsibilities?

- A. Vulnerability scanning
- **B. Access control**
- C. Network segmentation
- D. Intrusion detection

**Answer: B**

Explanation:

Access control is a network security concept that focuses on limiting network access based on user roles and responsibilities. It ensures that users are granted appropriate permissions and privileges based on their job functions. Access control mechanisms can include username/password authentication, multi-factor authentication, and role-based access control (RBAC).

### NEW QUESTION # 313

Which technology acts as a barrier between an internal network and external networks, filtering network traffic based on predefined security rules?

- A. Firewall
- B. IDS
- C. IPS
- D. Server

**Answer: A**

Explanation:

A firewall is a network security technology that acts as a barrier between an internal network and external networks (such as the internet). It filters network traffic based on predefined security rules, allowing or blocking traffic flows accordingly. Firewalls are often used to protect internal networks from unauthorized access and potential threats.

### NEW QUESTION # 314

When should a firewall rule triggering block external access to a network resource be escalated?

- A. Never, as it is a normal security function of a firewall.
- B. Only if the access attempt is from a known malicious IP address.
- C. Always, regardless of authorization.
- D. Only if the access was authorized.

**Answer: A**

Explanation:

Blocking external access to a network resource is a normal security function of a firewall and does not necessarily require escalation. Firewalls are designed to monitor and control incoming and outgoing network traffic based on predetermined rules and configurations. However, if the rule is triggered unexpectedly or causes disruption to critical services, it may be appropriate to escalate the issue for further investigation or adjustment of the firewall rule.

### NEW QUESTION # 315

.....
