

C-BW4H-2505 유효한 인증 공부자료 - C-BW4H-2505 높은 통과율 덤프 공부문제

NOTE: Each correct selection is worth one point.

Required secrets:

- Certificate
- Personal access token
- Shared Access Authorization token
- Username and password

Storage location:

- Azure Data Lake
- Azure Key Vault
- Azure Storage with HTTP access
- Azure Storage with HTTPS access

Answer:

Required secrets:

- Certificate
- Personal access token
- Shared Access Authorization token
- Username and password

Storage location:

- Azure Data Lake
- Azure Key Vault
- Azure Storage with HTTP access
- Azure Storage with HTTPS access

Explanation:

Every request made against a storage service must be authorized, unless the request is for a blob or container resource that has been made available for public or signed access. One option for authorizing a request is by using Shared Key.

Scenario: The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HTTPS.

The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers.

Reference: <https://docs.microsoft.com/en-us/rest/api/storageservices/authorize-with-shared-key>

Question: 3

비스를 제공해드려 아무런 걱정없이 C-BW4H-2505 시험에 도전하도록 힘이 되어드립니다. PassTIP 덤프를 사용하여 시험에서 통과하신 분이 전해주시는 희소식이 PassTIP 덤프 품질을 증명해드립니다.

SAP C-BW4H-2505 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> SAP BW 4HANA Data Flow: This section of the exam measures the practical ability of SAP Consultants to load data within the SAP BW 4HANA environment. It assesses familiarity with data movement and transformation processes across different layers of the system.
주제 2	<ul style="list-style-type: none"> Data Acquisition into SAP BW 4HANA: This section tests how Data Engineers manage data integration into SAP BW 4HANA from multiple sources. It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.

주제 3	<ul style="list-style-type: none"> • SAP BW • 4HANA Modeling: This section targets the skills of Data Engineers in selecting appropriate modeling options and applying best practices like LSA++ within SAP BW • 4HANA. It focuses on designing scalable, high-performing data models.
주제 4	<ul style="list-style-type: none"> • Fundamentals: This section of the exam measures the foundational understanding of SAP Consultants and covers essential terms and concepts related to SAP BW • 4HANA and SAP Business Data Cloud. It focuses on the core framework and architecture necessary to navigate and work with these platforms.
주제 5	<ul style="list-style-type: none"> • Native SAP HANA Modeling: This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.

C-BW4H-2505: SAP Certified Associate - Data Engineer - SAP BW/4HANA 덤프 공부 C-BW4H-2505 시험자료

PassTIP에서는 SAP 인증 C-BW4H-2505 시험 대비 덤프를 발췌하여 제공해드립니다. SAP 인증 C-BW4H-2505 시험 대비 덤프에는 시험문제의 모든 예상문제와 시험유형이 포함되어 있어 시험준비자료로서 가장 좋은 선택입니다. PassTIP에서 제공해드리는 전면적인 SAP 인증 C-BW4H-2505 시험 대비 덤프로 SAP 인증 C-BW4H-2505 시험 준비 공부를 해보세요. 통과율이 100%입니다.

최신 SAP Certified Associate C-BW4H-2505 무료 샘플문제 (Q74-Q79):

질문 # 74

You have already loaded data from a non-SAP system into SAP Datasphere. You want to federate this data with data from an InfoCube of your SAP BW powered by SAP HANA.

What do you need to use to combine the data?

- **A. SAP ABAP Connection**
- B. SAP BW Shell Migration
- C. SAP BW/4HANA Model Transfer
- D. SAP BW Remote Migration

정답: A

설명:

To federate data between SAP Datasphere and an InfoCube in SAP BW powered by SAP HANA, you need to establish a connection that allows SAP Datasphere to access the data stored in the InfoCube. Below is an explanation of the options:

* Explanation: This is the correct answer. An SAP ABAP Connection allows SAP Datasphere to connect to an SAP BW system and access its data objects, including InfoCubes. This connection leverages the ABAP stack to enable seamless integration between SAP Datasphere and SAP BW.

1: SAP Datasphere supports SAP BW connections via the ABAP stack, enabling federated queries and data access. This is documented in SAP's integration guides for SAP Datasphere and SAP BW.

2. SAP BW Shell Migration Explanation: This option is incorrect. SAP BW Shell Migration refers to the process of migrating SAP BW objects (e.g., InfoCubes, DataStore Objects) to SAP BW/4HANA. It is not related to federating data between SAP Datasphere and SAP BW.

Reference: Shell migration is a one-time activity focused on upgrading SAP BW systems to SAP BW/4HANA, as described in SAP's migration documentation.

3. SAP BW Remote Migration Explanation: This option is incorrect. SAP BW Remote Migration involves moving data and objects from a remote SAP BW system to SAP BW/4HANA. Like Shell Migration, it is not relevant to federating data with SAP Datasphere.

Reference: Remote migration is part of SAP's BW/4HANA transition strategy and does not address real-time data federation.

4. SAP BW/4HANA Model Transfer Explanation: This option is incorrect. SAP BW/4HANA Model Transfer refers to transferring

BW models (e.g., InfoCubes, DataSources) to SAP BW/4HANA. It is unrelated to federating data between SAP Datasphere and SAP BW.

Reference: Model transfer is a migration activity, not a mechanism for real-time data integration or federation.

Conclusion To federate data from an InfoCube in SAP BW powered by SAP HANA with SAP Datasphere, you need to use an SAP ABAP Connection. This connection enables SAP Datasphere to access and query data from the InfoCube in real time, facilitating seamless integration between the two systems.

질문 # 75

The Database Explorer in the Web IDE for SAP HANA provides a data file import wizard to create a table in SAP HANA from a flat file. What are possible actions after the system suggests the target structure? Note:

There are 3 correct answers to this question.

- A. Remove leading zeroes for a target table field.
- B. Adjust the suggested data type of the target table fields.
- C. Switch the table type between row store and column store.
- D. Define sorting properties for a target table field.
- E. Change the order of the fields in the target table.

정답: A,B,E

질문 # 76

Which layer of the layered scalable architecture (LSA++) of SAP BW/4HANA is designed as the main storage for harmonized consistent data?

- A. Flexible Enterprise Data Warehouse Core layer
- B. Open Operational Data Store layer
- C. Data Acquisition layer
- D. Virtual Data Mart layer

정답: A

설명:

The Layered Scalable Architecture (LSA++) of SAP BW/4HANA is a modern data warehousing architecture designed to simplify and optimize the data modeling process. It provides a structured approach to organizing data layers, ensuring scalability, flexibility, and consistency in data management. Each layer in the LSA++ architecture serves a specific purpose, and understanding these layers is critical for designing an efficient SAP BW/4HANA system.

* LSA++ Overview: The LSA++ architecture replaces the traditional Layered Scalable Architecture (LSA) with a more streamlined and flexible design. It reduces complexity by eliminating unnecessary layers and focusing on core functionalities. The main layers in LSA++ include:

* Data Acquisition Layer: Handles raw data extraction and staging.

* Open Operational Data Store (ODS) Layer: Provides operational reporting and real-time analytics.

* Flexible Enterprise Data Warehouse (EDW) Core Layer: Acts as the central storage for harmonized and consistent data.

* Virtual Data Mart Layer: Enables virtual access to external data sources without physically storing the data.

* Flexible EDW Core Layer: The Flexible EDW Core layer is the heart of the LSA++ architecture. It is designed to store harmonized, consistent, and reusable data that serves as the foundation for reporting, analytics, and downstream data marts. This layer ensures data quality, consistency, and alignment with business rules, making it the primary storage for enterprise-wide data.

* Other Layers:

* Data Acquisition Layer: Focuses on extracting and loading raw data from source systems into the staging area. It does not store harmonized or consistent data.

* Open ODS Layer: Provides operational reporting capabilities and supports real-time analytics.

However, it is not the main storage for harmonized data.

* Virtual Data Mart Layer: Enables virtual access to external data sources, such as SAP HANA views or third-party systems. It does not store data physically.

* Option A: Open Operational Data Store layer This option is incorrect because the Open ODS layer is primarily used for operational reporting and real-time analytics. While it stores data, it is not the main storage for harmonized and consistent data.

* Option B: Data Acquisition layer This option is incorrect because the Data Acquisition layer is responsible for extracting and staging raw data from source systems. It does not store harmonized or consistent data.

* Option C: Flexible Enterprise Data Warehouse Core layer This option is correct because the Flexible EDW Core layer is specifically designed as the main storage for harmonized, consistent, and reusable data. It ensures data quality and alignment with

business rules, making it the central repository for enterprise-wide analytics.

* Option D: Virtual Data Mart layer This option is incorrect because the Virtual Data Mart layer provides virtual access to external data sources. It does not store data physically and is not the main storage for harmonized data.

* SAP BW/4HANA Modeling Guide: The official documentation highlights the role of the Flexible EDW Core layer as the central storage for harmonized and consistent data. It emphasizes the importance of this layer in ensuring data quality and reusability.

* SAP Note 2700850: This note explains the LSA++ architecture and its layers, providing detailed insights into the purpose and functionality of each layer.

* SAP Best Practices for BW/4HANA: SAP recommends using the Flexible EDW Core layer as the foundation for building enterprise-wide data models. It ensures scalability, flexibility, and consistency in data management.

Key Concepts: Verified Answer Explanation: SAP Documentation and References: Practical Implications:

When designing an SAP BW/4HANA system, it is essential to:

* Use the Flexible EDW Core layer as the central repository for harmonized and consistent data.

* Leverage the Open ODS layer for operational reporting and real-time analytics.

* Utilize the Virtual Data Mart layer for accessing external data sources without physical storage.

By adhering to these principles, you can ensure that your data architecture is aligned with best practices and optimized for performance and scalability.

SAP Best Practices for BW/4HANA

질문 # 77

What are some of the advantages of using SAP BW/4HANA business content? Note: There are 2 correct answers to this question.

- A. Automatic content activation during installation of SAP BW/4HANA
- B. Automatic generation of Analysis Authorizations during SAP BW/4HANA content activation
- C. Accelerated SAP BW/4HANA implementation using ready-made models
- D. Ability to modify business content objects to meet customer specific requirements

정답: C,D

질문 # 78

Which objects values can be affected by the key date in a BW query? Note: There are 3 correct answers to this question.

- A. Basic key figures
- B. Display attributes
- C. Navigation attributes
- D. Time characteristics
- E. Hierarchies

정답: A,C,E

질문 # 79
