Region and Regionalism

The region is a large area with boundaries set by various cultural and natural criteria. It is widely divided by physical geography, human geography, and environmental aspects like the interaction between the environment and humanity.

Regionalism is occurred because of the monotonous building of the International Style in all over the world. Apart from the vernacular architecture, regionalism has a conscious in design.

Arch-301模擬試験サンプル、Arch-301問題例

銀行市場の急速な変化に合わせて、最新のArch-301学習教材を提供し、より多くの知識を確実に習得できるようにしています。また、Arch-301トレーニングクイズが市場に登場して以来、プロの作業チームは長年の教育的背景と職業トレーニングの経験を積んでいるため、Arch-301準備資料は優れた信頼性、完璧な機能、強力な実用性を備えています。私たちが提供できる多くの利点があるので、動かして、Arch-301トレーニング資料を試してみませんか？

Salesforce Certified B2B Solution Architect 認定 Arch-301 試験問題 (Q88-

Q93):

質問 # 88

Universal Containers (UC) is about to implement Sales Cloud, Service Cloud, and Revenue Cloud within its newly created Salesforce environment. But before UC begins, the CIO would like to understand the options for creating and migrating changes within Salesforce. UC is about to use a sandbox for the initial build and will deploy customisation up to the production environment. UC has decided to build packages of metadata to silo the functionality between the three clouds it is implementing for.

What are two key considerations a Solution Architect should keep in mind when recommending packaging?

Choose 2 answers

- A. It is impossible to track source control with package development; either the org owns the source or a source control does, but never both.
- **B. Design the package as modular, loosely coupled units of metadata rather than large chunks of an org.**
- C. Clouds like Revenue Cloud have their own packages so it is easy to work with them because their automation is limited.
- **D. Only utilize one functional automation tool (Flow, Workflow Rules, Process Builder) per object.**

正解: B、D

解説:

Modular packaging (A) promotes flexibility, scalability, and ease of maintenance, allowing for targeted deployments and updates. Limiting to one automation tool per object (B) simplifies design, reduces conflicts, and enhances maintainability, ensuring a more streamlined and efficient development and deployment process across Salesforce Clouds.

質問 # 89

Universal Containers (UC) uses Sales Cloud, Service Cloud, and Experience Cloud. The implementation was completed 5+ years ago, and Service Cloud users are now expressing dissatisfaction with system performance. A custom Visualforce page was developed to show relevant data to Experience Cloud users.

The same page is used by the Support team but displays more information based on their profile. UC has a small internal Support team for Salesforce that periodically enables new features in production.

Which best practice should the Solution Architect recommend to avoid these types of issues in the future?

- A. Assess the level of data quality and test new features with a pilot before enabling for all users.
- **B. Assess the level of technical debt and test new features in a sandbox before enabling in production.**
- C. Assess the level of data quality and test new features with a subset of users in production before enabling all users.
- D. Assess the level of technical debt and test new features with the Product team in a Developer sandbox.

正解: B

解説:

To avoid issues related to system performance and ensure the scalability of Salesforce solutions, it's crucial to manage technical debt and thoroughly test new features in a controlled environment. A sandbox provides a safe space for testing, allowing UC to simulate the impact of changes without affecting the production environment. This practice helps in identifying potential issues and resolving them before they can impact end-users.

Salesforce's documentation on best practices for managing technical debt and the use of sandboxes for testing provides guidance on these processes, emphasizing the importance of a proactive approach to system maintenance and feature testing.

質問 # 90

During a B2B multi-cloud implementation, an executive sponsor from Universal Containers (UC) approaches the Solution Architect to discuss ongoing support and new functionality that will be rolled out to support UC.

The current implementation supports Experience Cloud, Service Cloud, and Sales Cloud.

Which three recommendations should a Solution Architect make to ensure features are enabled without impacting user efficiency?

Choose 3 answers

- A. Give users the ability to opt-out of any new feature they dislike.
- **B. Ensure development, training, and production environments are in place.**
- **C. Fully document all customizations added to the system.**
- **D. Communicate and train users on new features.**
- E. Give users a way to raise support tickets for new features they do not understand.

正解: B、C、D

解説:

* Option C seems correct because it is important to document all the customizations added to the system, such as code, configuration, integrations, etc., so that they can be easily understood, maintained, and updated by the support team or future developers.

* Option D seems correct because it is essential to communicate and train users on new features that are rolled out to support UC's business needs and goals. This can help users adopt the new features faster and more effectively, as well as reduce confusion or frustration.

* Option E seems correct because it is advisable to have separate environments for development, training, and production purposes. This can help ensure that new features are developed and tested in a safe and isolated environment before being deployed to the production environment where they can affect real users and data.

質問 # 91

Universal Containers (UC) is looking to implement a CPQ + B2B Commerce multi-cloud solution and use the CPQ B2B Commerce Connector to keep the two in sync. As part of this implementation, UC is looking to be able to have a streamlined product and pricing experience. As UC would like to sell product kits with tiered pricing through the self-service storefront, it would like to ensure this model can be supported effectively.

Which two considerations should a Solution Architect keep in mind for the implementation?

Choose 2 answers

- A. On the CPQ 826 Commerce Connector, the default mapping of tiered pricing in 826 Commerce is to Discount Schedules in CPQ.
- B. For the described multi-cloud solution, it is a best practice to set the CPQ precision to two decimal points.
- C. It is important to ensure the Price Rules run for Quotes initiated via 628 Commerce Storefront to maintain consistency in business rules being applied.
- D. For supporting kits in the B2B Commerce Storefront, they need to create equivalent bundle products on the CPQ side.

正解: A、D

解説:

The CPQ B2B Commerce Cloud Connector is an unmanaged package from Salesforce Labs that allows B2B Commerce and CPQ customers to configure or customize functionality¹. It syncs products, pricing, quote requests, and orders in both clouds². For supporting kits in the B2B Commerce Storefront, they need to create equivalent bundle products on the CPQ side³. A kit is a product that contains other products as components³. A bundle is a product that has one or more options that can be added or removed by a user⁴. The connector maps kits to bundles using a custom field called Kit ID on both objects³.

On the CPQ 826 Commerce Connector, the default mapping of tiered pricing in 826 Commerce is to Discount Schedules in CPQ⁵. Tiered pricing lets you set different prices for different quantities of a product⁵. Discount schedules let you apply discounts based on quantity or amount ranges for a product. The connector maps tiered prices to discount schedules using a custom field called Tiered Price ID on both objects⁵.

質問 # 92

Universal Containers (UC) wants to ensure its field technicians are interacting with customers in a professional manner. The sales department already uses a third-party survey tool.

Which action should a Solution Architect recommend for UC to enable service managers to track customer satisfaction based on the technician and the job?

- A. Select an AppExchange app that sends a survey to each customer after a work order is completed.
- B. Use the existing survey tool by integrating the responses to the Service Appointment and Service Resource record.
- C. Build a Salesforce Survey to send out after each service appointment and integrate that data with the third-party survey tool.
- D. Use the existing survey tool by integrating the responses to Case number and User record.

正解: B

解説:

Integrating the existing third-party survey tool with Salesforce, specifically linking survey responses to Service Appointment and Service Resource records, enables UC to track customer satisfaction effectively.

This approach leverages the existing survey infrastructure, minimizes disruption, and provides a direct correlation between technician

performance and customer feedback. It aligns with Salesforce's capabilities for integrating external data and utilizing it within the CRM to enhance service management and improve customer satisfaction insights.

質問 #93

.....

IT技術の急速な発展につれて、IT認証試験の問題は常に変更されています。したがって、Xhs1991のArch-301問題集も絶えずに更新されています。それに、Xhs1991の教材を購入すれば、Xhs1991は一年間の無料アップデート・サービスを提供してあげます。問題が更新される限り、Xhs1991は直ちに最新版のArch-301資料を送ってあげます。そうすると、あなたがいつでも最新バージョンの資料を持っていることが保証されます。Xhs1991はあなたが試験に合格するのを助けることができるだけでなく、あなたは最新の知識を学ぶのを助けることもできます。このような素晴らしい資料をぜひ見逃さないでください。
