For the client the time is limited and very important and our product satisfies the client's needs to download and use our PAM-DEF practice engine immediately.

CyberArk Defender - PAM Sample Questions (Q86-Q91):

NEW QUESTION # 86

When creating an onboarding rule, it will be executed upon .

- A. All accounts in the pending accounts list
- B. Any future accounts discovered by a discovery process
- C. Both "All accounts in the pending accounts list" and "Any future accounts discovered by a discovery process"

Answer: B

NEW QUESTION # 87

During a High Availability node switch you notice an error and the Cluster Vault Manager Utility fails back to the original node. Which log files should you check to investigate the cause of the issue? (Choose three.)

- A. ITALog.log
- B. VaultDB.log
- C. logiccontainer.log
- D. CyberArk Webconsole.log
- E. PM_Error.log
- F. ClusterVault.console.log

Answer: B,E,F

Explanation:

Explanation

During a High Availability (HA) node switch, if an error occurs and the Cluster Vault Manager Utility fails back to the original node, you should check the following log files to investigate the cause of the issue:

- * VaultDB.log: This log file contains information related to the database operations within the CyberArk Vault. It can provide insights into any issues that may have occurred during the database transactions at the time of the node switch1.
- * PM_Error.log: The PM_Error.log file records errors encountered by the Password Manager (PM) during its operations. This log can help identify any issues related to password management that might have contributed to the failure of the node switch1.
- * ClusterVault.console.log: The ClusterVault.console.log file includes error, warning, and information messages from the CyberArk Digital Cluster Vault. It is used for advanced troubleshooting and can reveal details about the error that caused the failback to the original node2.

NEW QUESTION # 88

A newly created platform allows users to access a Linux endpoint. When users click to connect, nothing happens. Which piece of the platform is missing?

- A. UnixPrompts.ini
- B. PSM-SSH Connection Component
- C. PSM-RDP Connection Component
- D. UnixProcess.ini

Answer: B

Explanation:

Explanation

A platform is a set of parameters that defines how CyberArk manages passwords and sessions for a specific type of account or system. To allow users to access a Linux endpoint, the platform needs to have a PSM-SSH connection component, which enables transparent connections to Linux machines using the SSH protocol. The PSM-SSH connection component is configured in the Master Policy and defines the settings for the PSM connection, such as the port, the authentication method, and the terminal type. If the platform is missing the PSM-SSH connection component, the users will not be able to click to connect to the Linux endpoint.
