

# UiPath-ADAv1 Practice Braindumps, UiPath-ADAv1 Exam Discount

What's more, part of that Free4Torrent UiPath-ADAv1 dumps now are free: <https://drive.google.com/open?id=1Y8VgCZ-SiP74FAmtAlcyhgxWhZJ3eVVQ>

It will make you practice nicely and productively as you will experience better handling of the UiPath UiPath-ADAv1 questions when you take the actual UiPath UiPath-ADAv1 exam to grab the UiPath UiPath-ADAv1 certification. Work hard and practice with our UiPath UiPath-ADAv1 Dumps till you are confident to pass the UiPath UiPath-ADAv1 exam. And that too with flying colors and achieving the UiPath UiPath-ADAv1 certification on the first attempt.

Sometimes hesitating will lead to missing a lot of opportunities. If you think a lot of our UiPath-ADAv1 exam dumps PDF, you should not hesitate again. Too much hesitating will just waste a lot of time. Our UiPath-ADAv1 exam dumps PDF can help you prepare casually and pass exam easily. If you make the best use of your time and obtain a useful certification you may get a senior position ahead of others. Chance favors the prepared mind. Free4Torrent provide the best UiPath-ADAv1 Exam Dumps Pdf materials in this field which is helpful for you.

## UiPath-ADAv1 Exam Discount - UiPath-ADAv1 Passed

It is similar to the UiPath-ADAv1 desktop-based software, with all the elements of the desktop practice exam. This UiPath-ADAv1 exam can be accessed from any browser and does not require installation. The UiPath-ADAv1 questions in the mock test are the same as those in the real exam. And candidates will be able to take the web-based UiPath-ADAv1 Practice Test immediately through any operating system and browsers.

## UiPath UiPath-ADAv1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Excel Automation: The section delves into Excel Automation, showcasing the use of modern Excel activities and workbook-level operations.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Logging: The section provides insights into interpreting robot execution logs and adhering to logging best practices, ensuring effective issue identification and resolution.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Libraries and Templates: This topic covers the creation, publication, and consumption of process libraries, along with the sharing and access of templates, promoting efficient project development and standardization.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Debugging: Here, we explore various debugging techniques, including debug modes, actions, and ribbon options. It also guides users through setting breakpoints, utilizing debugging panels, and optimizing performance with profile execution.</li></ul>

Topic 5	<ul style="list-style-type: none"> <li>• <b>UI Automation:</b> Here, the topic explains how UI Automation works and offer guidance on using the Modern Recorder and associated activities. It also covers UI synchronization and the configuration of static and dynamic descriptors.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• <b>Variables and Arguments:</b> This topic introduces data types and delves into creating, managing, and utilizing variables, arguments, and global constants</li> <li>• variables. It also clarifies the distinctions between these concepts, ensuring a comprehensive understanding of data handling in automation projects.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>• <b>Working with Files and Folders:</b> Here, you explore creating, managing, and navigating local files and folders, providing a foundation for file system automation.</li> </ul>
Topic 8	<ul style="list-style-type: none"> <li>• <b>Studio Interface:</b> Here, the topic guides users through installing Studio Community Edition and connecting to Orchestrator. It covers profile differences, backstage view options, compatibility modes, and package management. Additionally, it offers an in-depth exploration of the Studio interface and its various elements.</li> </ul>
Topic 9	<ul style="list-style-type: none"> <li>• <b>Workflow Analyzer:</b> Here, the topic introduces the Workflow Analyzer tool, explaining its use for project analysis and validation, and providing guidance on configuring its settings.</li> </ul>
Topic 10	<ul style="list-style-type: none"> <li>• <b>Object Repository:</b> This topic covers the creation, publication, and consumption of UI Libraries, including the use of static and dynamic descriptors, offering a structured approach to UI element management.</li> </ul>
Topic 11	<ul style="list-style-type: none"> <li>• <b>Implementation Methodology:</b> The section offers an overview of project implementation stages, interpretation of PDDs and SDDs, and the conduct of automation project peer reviews, ensuring a structured approach to development.</li> </ul>

## UiPath Automation Developer Associate v1 Exam Sample Questions (Q82-Q87):

### NEW QUESTION # 82

In the case of accidentally starting a process from UiPath Assistant, where should the user manually terminate the execution?

- A. The user should end the execution from the "Home" tab and locate the running process associated with the execution.
- **B. The user should end the execution from the "Jobs" tab in UiPath Assistant.**
- C. The user should end the execution by closing the UiPath Assistant application.
- D. The user should end the execution by terminating the UiPath Robot service from the Task Manager.

**Answer: B**

Explanation:

If a process is accidentally started from UiPath Assistant, the user should manually terminate the execution from the "Jobs" tab in UiPath Assistant. This tab shows the list of running processes, where the user can stop the unintended process.

### NEW QUESTION # 83

What are the expected tasks that should be performed by an Automation Business Analyst?

- A. Design the architecture of the automation solution.
- B. Define the overall solution of an automation project.
- **C. Analyze the needs and propose solutions.**
- D. Test the final solution.

**Answer: C**

Explanation:

The Automation Business Analyst (BA) plays a key role in identifying, analyzing, and documenting business processes for automation. They do not design or develop the automation, but they focus on process analysis and feasibility.

Key Responsibilities of an Automation Business Analyst:

# Analyze business needs and identify processes that are suitable for automation. # Work with stakeholders to gather requirements and document workflows. # Propose automation solutions that align with business goals. # Validate feasibility of automation with SMEs and developers. # Ensure process compliance with best practices.

Why is Option B Correct?

- \* The primary responsibility of a Business Analyst is process analysis and proposing automation solutions.
- \* They act as a bridge between business teams and technical teams.

Example Tasks of a Business Analyst:

- \* Meet with business teams to understand pain points.
- \* Identify processes that are repetitive and rule-based.
- \* Document workflows and assess automation feasibility.
- \* Collaborate with developers and architects to ensure smooth implementation.

Why Other Options Are Incorrect?

- \* A (Design the architecture of the automation solution.) #
- \* Incorrect. Solution design is the role of a Solution Architect, not a BA.
- \* C (Test the final solution.) #
- \* Incorrect. Testing is performed by QA/Test Engineers, not BAs.
- \* D (Define the overall solution of an automation project.) #
- \* Incorrect. The Solution Architect defines the overall automation framework.

#### NEW QUESTION # 84

During the debugging process, a developer paused the execution. To alter the characteristics of the ongoing flow and change the values of variables within the existing scope, which panel of the UiPath interface is recommended to be accessed?

- A. Variables Panel
- B. Information Window
- **C. Locals Panel**
- D. Execution Flow Panel

**Answer: C**

Explanation:

The Locals Panel in UiPath Studio displays all variables within the current execution scope during debugging.

Why is Option A Correct?

- \* The Locals Panel allows developers to:
- \* View and modify variable values in real time.
- \* Inspect arguments, objects, and data structures.
- \* Test different values to troubleshoot the automation flow.

Example Usage:

- \* Start Debugging (F5).
- \* Pause Execution (F9 or Breakpoint).
- \* Go to Locals Panel # Modify variable values.
- \* Resume Execution (F5) to test the new values.

Why Other Options Are Incorrect?

- \* B (Execution Flow Panel) #
- \* Displays the flow of execution but does not allow variable modifications.
- \* C (Variables Panel) #
- \* Shows all declared variables, but it cannot modify variable values during execution.
- \* D (Information Window) #
- \* Displays logs and system messages, but does not provide variable insights.

### NEW QUESTION # 85

A developer is building a process that needs to click an element which requires a mouse hover to become visible. However, the element does not appear with the default click setting. The input method for the Click activity is Send Window Message Which property should the developer configure to be able to click the element?

- A. The developer should change the input method to Hardware Events and the CursorMotionType to Smooth.
- B. The property AlterIfDisabled should be set to True.
- C. The developer should change the input method to Simulate and the CursorMotionType to Instant.
- D. The property AlterIfDisabled should be set to False.

**Answer: A**

**Explanation:**

The input method for the Click activity determines how the click is performed on the target element. The Send Window Message input method is fast and reliable, but it does not support hovering over elements. Therefore, the developer should use the Hardware Events input method, which simulates the real mouse and keyboard actions. The CursorMotionType property specifies how the cursor moves to the target element. The Smooth option makes the cursor move in a natural way, which can trigger the hover effect on the element. (UiPath Studio documentation<sup>12</sup>)

### NEW QUESTION # 86

Which of the following options is correct about a State Machine layout?

- A. Can have only one initial state and only one final state.
- B. Can have multiple initial states and only one final state.
- C. Can have only one initial state and multiple final states.
- D. Can have multiple initial states and multiple final states.

**Answer: C**

Explanation:

A State Machine layout is a type of workflow that allows developers to create complex and dynamic automation processes that can branch based on user input or predefined conditions. A State Machine layout consists of states, transitions, and triggers. A state represents a specific step or action in the process, a transition defines the direction of the flow between states, and a trigger determines when a transition should occur. A State Machine layout can have only one initial state, which is the starting point of the process, and multiple final states, which are the possible end points of the process. (UiPath Automation Developer study guide)
