Google ChromeOS-Administrator Latest Study Questions, Test ChromeOS-Administrator Simulator Free

Our ChromeOS-Administrator Study Guide is famous for its instant download, we will send you the downloading link to you once we receive your payment, and you can down right now. Besides the ChromeOS-Administrator study guide is verified by the professionals, so we can ensure that the quality of it. We also have free update, you just need to receive the latest version in your email address. If you don't have it, you can check in your junk mail or you can contact us.

Google Professional ChromeOS Administrator Exam Sample Questions (Q40-Q45):

NEW QUESTION # 40

You are setting up ChromeOS devices in a public library and need to prevent your ChromeOS devices from sleeping when not in use. How would you set up your policy to achieve this?

- A. In "Power management settings" apply "Do not allow device to sleep/shut down when idle on the sign-in screen "
- B. In "Power management settings" set the policy to "Only allow users to turn off the device using the physical power button "
- C. In "Managed Guest Session settings" set the maximum user session length to "unlimited "
- D. In "User & Browser Settings" for Power and shutdown set the policy to "Do not allow wake locks "

Answer: A

Explanation:

This setting is specifically designed to prevent Chrome OS devices from sleeping or shutting down when they are not actively being used, but are on the sign-in screen. This is ideal for public environments like libraries where the devices are meant to be accessible at all times.

Other options are incorrect because:

- * B: This setting controls wake locks, which are used to keep a device awake under certain conditions. It doesn't directly control sleep behavior on the sign-in screen.
- * C: This setting controls how users can turn off the device, but doesn't prevent the device from sleeping on its own.
- * D: This setting controls the maximum length of a guest session, but doesn't affect the device's sleep behavior on the sign-in screen.

NEW QUESTION # 41

You want to restrict who can sign in to a managed device during working hours. Which two settings do you need to use? Choose 2 answers

- A. User Data (Ephemera))
- B. Single sign-on IdP redirection
- C. Family Link accounts
- D. Device off hours

Answer: C,D

Explanation:

* Device off hours: This setting allows you to specify times when the device cannot be used, effectively restricting access to certain hours.

* Family Link accounts: Family Link is a parental control app that allows you to manage a child's account and device usage. By requiring Family Link accounts, you can enforce sign-in restrictions for younger users.

Other options are incorrect because:

- * A: Single sign-on (SSO) redirection simplifies sign-in for authorized users, but doesn't inherently restrict access.
- * C: User Data (Ephemeral) controls whether user data is saved locally, but doesn't restrict sign-in.

NEW QUESTION # 42

You have been asked to explain the built-in security features of ChromeOS. What is the benefit of having verified boot enabled on a ChromeOS device?

- A. It installs the known safe backup OS every time the device is slatted up.
- B. It ensures that the OS is uncompromised

- C. It allows updates to happen in the background
- D. Running both operating systems on one device at the same time makes It twice as powerful

Answer: B

Explanation:

Verified Boot in ChromeOS is a security mechanism that checks the integrity of the operating system during startup. If it detects any unauthorized modifications or compromises, it can initiate recovery processes to restore the OS to a known good state, ensuring that the device boots up with a secure and untampered operating system.

Option B is incorrect because background updates are a separate feature.

Option C is incorrect because dual-boot is not related to Verified Boot.

Option D is incorrect because Verified Boot doesn't install a backup OS but verifies the existing one.

NEW QUESTION # 43

Your network administrator wants to block Google services traffic. What is the result?

- A. Chrome devices will crash
- B. Nothing This isn't an issue
- C. Chrome devices will not be able to reach Google
- D. Google Search will not work

Answer: D

Explanation:

Blocking Google services traffic will prevent Chrome devices from accessing any Google-owned domains, including google.com. This will directly impact Google Search, as it relies on communication with Google servers to provide results.

Other Google services like Gmail, YouTube, Google Drive, etc., will also be inaccessible. However, the Chrome device itself will not crash, as it can still function with other websites and applications.

NEW QUESTION # 44

A customer has a mission-critical workload running on ChromeOS and needs devices configured to reduce ChromeOS changes. How can an admin reduce the risk of an unexpected change in an OS update affecting the customer's entire ChromeOS device domain while maintaining security and minimizing admin workload?

- A. Move to a Long-term Support channel
- B. Force auto reboot after update
- C. Enable variations
- D. Add an update rollout plan

Answer: D

Explanation:

Update rollout plans in the Google Admin console allow administrators to gradually roll out ChromeOS updates to a subset of devices first. This allows for testing in a controlled environment before deploying to the entire fleet, reducing the risk of unexpected issues impacting all devices.

Steps to add an update rollout plan:

- * Access Google Admin Console: Sign in with your administrator credentials.
- * Navigate to Device Management: Go to Devices > Chrome > Settings > Updates.
- * Create Rollout Plan: Click on "Add an update rollout plan."
- * Select Devices: Choose the specific devices or organizational units (OUs) to include in the initial rollout.
- * Set Timeline: Define the start and end dates for the rollout.
- * Save and Apply: Save the plan and apply it to the selected devices.
