In addition, we are pass guarantee and money back guarantee, if you fail to pass the exam by using JN0-106 study materials of us, we will give you full refund. And the money will be returned to your payment account.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q119-Q124):

NEW QUESTION # 119

Click the Exhibit button.

Referring to the exhibit, what would be the next-hop address for the packet destined for the 10.0.0.0/24 network if the ge-0/0/1 interface goes down?

- A. 10.12.0.2
- B. 10.25.11.1
- C. 10.23.0.3
- D. 10.12.0.1

Answer: C

Explanation:

If the ge-0/0/1.0 interface goes down, the route to 10.0.0.0/24 learned via ge-0/0/1.0 (10.12.0.1) is lost. The router will use the next available route, which is the static route to 10.0.0.0/24 via

10.23.0.3 on ge-0/0/2.0.

NEW QUESTION # 120

You have just increased the MTU size of interface ge-0/0/0 and committed the configuration. Which command would help you identify the applied MTU change?

- A. monitor interface ge-0/0/0
- B. monitor traffic interface ge-0/0/0
- C. show interfaces ge-0/0/0 terse
- D. show interfaces ge-0/0/0

Answer: D

Explanation:

After increasing the MTU size of an interface and committing the configuration, the command to verify the applied MTU change is D, "show interfaces ge-0/0/0." This command displays detailed information about the interface, including the current MTU size, making it the best choice for verifying the applied changes.

NEW QUESTION # 121

You have logged on to a Junos device and are at the operational mode prompt. Which two commands are used at this prompt? (Choose two.)

- A. show interface ge-0/0/0
- B. request system shutdown
- C. run show interface terse
- D. set interface ge-0/0/0 unit 0 family inet

Answer: A,B

Explanation:

At the operational mode prompt on a Junos device, you can use various commands to view the device's status and request system operations. The show interface ge-0/0/0 command is used to display information about a specific interface, while the request system shutdown command is used to properly shut down the device. The request system shutdown is a valid operational mode command to gracefully shut down the device.

NEW QUESTION # 122

What are two methods for navigating to configuration mode from an operational mode prompt? (Choose two.)

- A. Use the exit command.
- B. Use the quit command.
- C. Use the configure command.
- D. Use the edit command.

Answer: C,D

Explanation:

In Junos OS, to navigate from operational mode to configuration mode, you can use either the edit or configure command. Both commands move the CLI from operational mode, where you can view the state of the device, to configuration mode, where you can make changes to the device's configuration.

NEW QUESTION # 123

Which Junos OS feature allows an administrator to revert the system configuration to a previously saved state in case of errors or misconfiguration?

- A. commit check

- B. load merge
- C. rescue configuration
- **D. rollback**

Answer: D

Explanation:

The "rollback" feature allows administrators to revert to earlier configuration versions stored in the system. Junos maintains multiple rollback files, making it easy to recover from errors. This feature is critical for maintaining network stability and quick recovery.

NEW QUESTION # 124

.....

You can also be a part of this wonderful community. To do this you just need to pass the JN0-106 certification exam. Are you ready to accept this challenge? Looking for the proven and easiest way to crack the Juniper JN0-106 Certification Exam? If your answer is yes then you do not need to go anywhere. Just download PracticeMaterial Junos, Associate (JNCIA-Junos) exam questions and start Junos, Associate (JNCIA-Junos) exam preparation without wasting further time.
