AVIXA Certified Technology Specialist Sample Questions (Q175-Q180):

NEW QUESTION # 175

Which of the following is the BEST service when new firmware is available for installed equipment across a fleet of conference rooms?

- A. updating them all at once
- B. a ringed update approach
- C. replacing the equipment
- D. keeping current version

Answer: B

Explanation:

The ringed update approach is the best service when new firmware is available for installed equipment across a fleet of conference rooms. This approach involves updating the firmware in phases or "rings," starting with a small group of devices to ensure that the update is stable and does not introduce new issues. Once the initial ring is confirmed to be successful, the update is gradually rolled out to additional groups, reducing the risk of widespread problems. This method allows for controlled testing and monitoring, ensuring that any issues can be addressed before the update is applied to all devices.

NEW QUESTION # 176

Which agreement typically includes installation materials and workmanship against failure for a stipulated period after the installation is complete?

- A. Preventive warranty
- B. Manufacturer's warranty
- C. Service warranty
- D. System warranty

Answer: D

Explanation:

A system warranty is provided by the AV integrator and covers the entire installed system, including materials and workmanship, for a specified period post-installation. This ensures that any issues arising from the installation process are addressed without additional cost to the client.

NEW QUESTION # 177

When connecting a condenser microphone, what MUST be included in die system design for it to operate?

- A. mixer
- B. stand
- C. power source
- D. transmitter

Answer: C

Explanation:

A condenser microphone requires a power source to operate because it uses an electrostatic principle to convert sound into an electrical signal. This power is typically provided by phantom power supplied by a mixer or an audio interface. Without this power source, the condenser microphone will not function. It is crucial to include a power source in the system design to ensure the microphone operates correctly.

NEW QUESTION # 178

Which connector is typically used for ease of termination for various signal types?

- A.

- B.

Answer: A

Explanation:

Connector A is a BNC (Bayonet Neill-Concelman) connector, which is commonly used for a variety of signal types, including video (such as composite and SDI), RF signals, and even some data signals. It is known for its ease of termination, with a simple twist-lock mechanism that ensures secure and quick connections. The BNC connector's versatility and reliability make it popular in professional AV environments.

* Connector B is a VGA (Video Graphics Array) connector, typically used for analog video signals, particularly between computers and monitors. However, VGA connectors are not typically associated with ease of termination due to their multiple pins and more complex soldering requirements compared to the quick-connect design of BNC connectors.

CTS Technology Specialist ReferenceThe CTS curriculum highlights BNC connectors as versatile and easy- to-use, suitable for a range of AV signal types. Their locking mechanism and straightforward assembly process make them a preferred choice for AV professionals needing quick and reliable connections across various applications.

NEW QUESTION # 179

When selling rental or staging services, which is the MOST effective way to showcase a company's services and expertise?

- A. Present photos and drawings of similar events.
