1z0-134 Braindumps Downloads – High Pass-Rate Questions Exam for 1z0-134: Oracle WebLogic Server 12c: Advanced Administrator II

Cease to struggle and you cease to live. Only by continuous learning can we not be surpassed by others. Many people do not like to study and think that learning is a very vexing thing. This kind of cognition makes their careers stagnate. 1z0-134 test question will change your perception. 1z0-134 learning dumps aim to help students learn easily and effectively that has been developed over many years by many industry experts. With 1z0-134 study tool, you no longer need to look at a drowsy textbook. You do not need to study day and night. With 1z0-134 learning dumps, you only need to spend 20-30 hours on studying, and then you can easily pass the exam. At the same time, the language in 1z0-134 test question is very simple and easy to understand. Even if you are a newcomer who has just entered the industry, you can learn all the knowledge points without any obstacles. We believe that 1z0-134 study tool will make you fall in love with learning. Come and buy it now.

Oracle WebLogic Server 12c: Advanced Administrator II Sample Questions (Q95-Q100):

NEW QUESTION # 95

You are creating and configuring a production WebLogic Server (WLS) domain that is highly available. Which three WebLogic Server features allow you to best accomplish this requirement? (Choose three.)

- A. Whole-server migration
- B. DNS caching
- C. Multiple standalone managed servers
- D. Machine migration
- E. Cluster
- F. Load Balancer

Answer: A,E,F

Explanation:

B Load balancing is the even distribution of jobs and associated communications across the computing and networking resources in your environment.

C: In a WebLogic Server cluster, application processing can continue when a server instance fails.

E: Migration in WebLogic Server is the process of moving a clustered WebLogic Server instance or a component running on a clustered instance elsewhere if failure occurs. This is called Whole-server migration.

References:

NEW QUESTION # 96

You created a script to monitor your WebLogic Server WLS Execute Thread:

```
#!/bin/bash

stack $1 > stack.txt
m ExecuteThread.log

while read line
do
    echo $line | grep "\[.*\].* ExecuteThread:" >> ExecuteThread.log
done < stack.txt
m stack.txt
```

Here is a message in your ExecuteThread.log file:

```
"[xxxx] ExecuteThread: 0 for queue: 'weblogic.kernel.Default (self-tuning)' " daemon
prio=10 tid=0x00007fa4404bf000 nid=0xde5 waiting on condition [0x00007fa4583c7000]
```

What is the value of xxxx if the thread has been running a request for twenty minutes, assuming a default configuration?

- A. ACTIVE
- B. ADMIN
- C. STUCK
- D. WAITING
- E. SRANDBY
- F. RUNNING
- G. FAILED

Answer: C

Explanation:

Explanation

This thread is considered Stuck by WebLogic because it's been running for over the time defined in MaxStuckThreadTime (600 seconds by default). Weblogic Server waits for this time to be reached before marking a thread as stuck if the thread is still working after this time.

Example: [STUCK] ExecuteThread: '2' for queue: 'weblogic.kernel.Default (self-tuning)' id=73 idx=0x128 nid=13410 prio=1 alive, in native, daemon

NEW QUESTION # 97

You are managing a WebLogic domain that has the default built-in diagnostic module configured for each server in the domain. You have the following requirements:

What are two approaches you can apply to achieve this result? (Choose two.)

- A. Clone the built-in module, add new metrics to it, deactivate the existing module, and activate your new module.
- **B. Leave the built-in module, create a new module and add metrics to it, and activate your new module alongside the built-in module.**
- C. Remove the built-in module, create an external resource descriptor module and add built-in and new metrics to it, and activate your new module alongside the built-in module.
- **D. Leave the built-in module, create an external resource descriptor module and add metrics to it, and activate your new module alongside the built-in module.**

Answer: B,D

Explanation:

In a given domain, you can create multiple diagnostic system modules with distinct configurations.

You can target multiple diagnostic system modules to any given server or cluster.

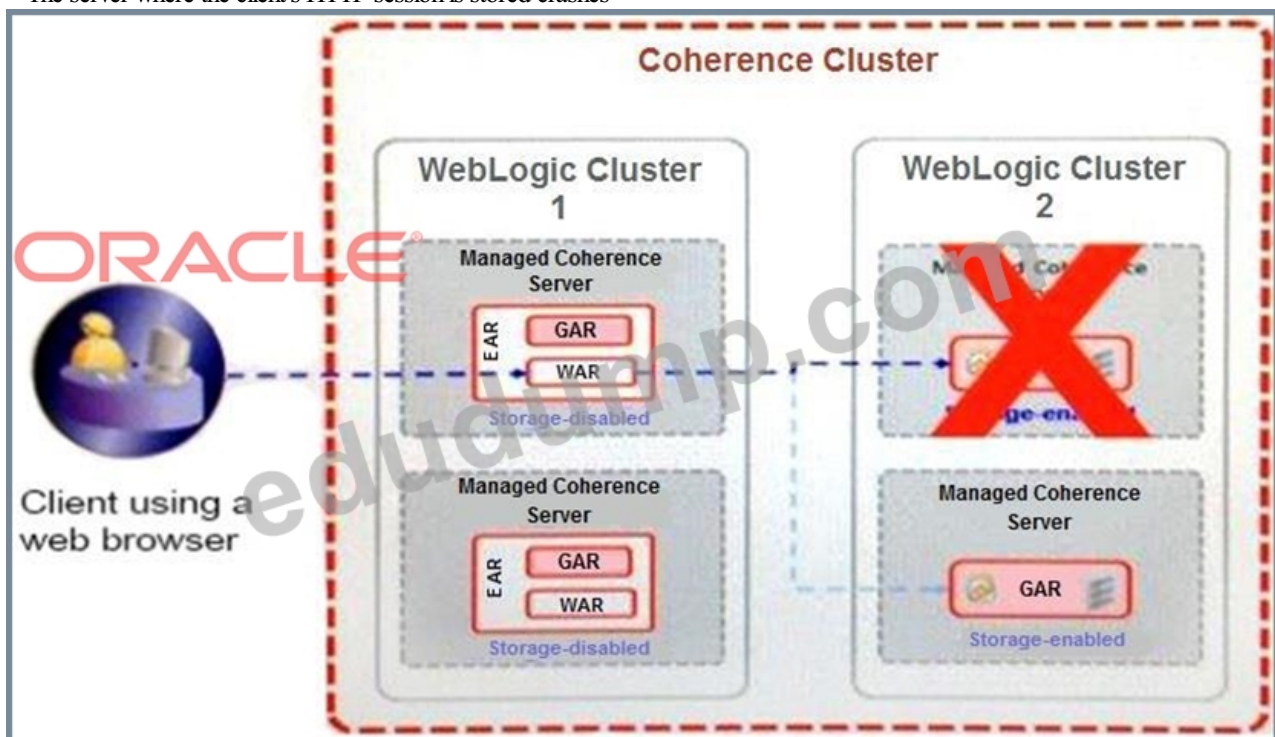

Note: To configure and use the Instrumentation, Harvester, and Watch and Notification components at the server level, you must first create a system resource called a diagnostic system module, which will contain the configurations for all those components. The configuration of diagnostic system module is defined in a resource descriptor. A resource descriptor can be either configured or external.

NEW QUESTION # 98

Review the diagram below. It depicts the following:

- * A WebLogic domain that consists of two WebLogic clusters that are each included in a Coherence cluster
- * The Coherence cluster includes a configuration for Coherence*Web HTTP session storage
- * An application deployed on cluster 1 that is configured to use Coherence*Web
- * A client is using a web browser to interact with the application on cluster 1 (via a proxy)
- * The client's HTTP session is stored by Coherence*Web on the server in the upper right-hand corner
- * The server where the client's HTTP session is stored crashes

Assuming the next request for an HTTP session attribute is a new attribute that is not stored in a near-cache, the client's session attribute is fetched from the remaining storage-enabled server in cluster 2.

Why is the session attribute retrieved from this other server's cache? (Choose the best answer.)

- A. Coherence*Web stores sessions in a replicated cache on the back end and the request fails over to the new location automatically.
- B. Coherence*Web stores sessions in a cache that is backed by a database cache loader. The data is fetched from the database and placed into the cache on the new server.

- C. Coherence*Web stores sessions in a distributed cache on the back end and the request fails over to the new location after partition re-balancing takes place.
- D. Coherence*Web stores sessions in a shared disk cache on the back end and Coherence*Web automatically load balances requests.

Answer: C

NEW QUESTION # 99

You need to log the JMSMessageID header value for incoming messages.

What is the prefix that you would see for the header values? (Choose the best answer.)

- A. JMS:
- B. VAL:
- C. MSG:
- D. NO:
- E. ID:

Answer: E

Explanation:

Explanation/Reference: https://docs.oracle.com/cd/E24329_01/apirefs.1211/e24393/WebLogic.Messaging.IMessage.JMSMessageID.html

NEW QUESTION # 100

.....

Challenge is omnipresent like everywhere. By eliciting all necessary and important points into our 1z0-134 practice materials, their quality and accuracy have been improved increasingly, so their quality is trustworthy and unquestionable. There is a bunch of considerate help we are willing to offer. Besides, according to various predispositions of exam candidates, we made three versions for your reference. Untenable materials may waste your time and energy during preparation process.
