So you could see the detailed information of our JN0-481 Exam Questions before you decide to buy them on our web. Also we have free demo of our JN0-481 exam questions for you to try before you make the purchase.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q45-Q50):

NEW QUESTION # 45

You are receiving cable, interface, and BGP anomalies from several devices within the data center fabric. In Juniper Apstra, how would you troubleshoot these types of errors?

- A. In the UI, go to Devices and confirm that agent connectivity is fine.
- B. In the UI, access the console to the devices and review the interface states.
- **C. In the UI, verify device connectivity by consulting the cable map.**
- D. In the UI, go to Time Voyager and revert to the last working version.

Answer: C

Explanation:

The cable map is a graphical representation of the physical connections between the devices in the data center fabric. It shows the status of the cables, interfaces, and BGP sessions for each device. You can use the cable map to identify and troubleshoot any cable, interface, or BGP anomalies that may occur in the fabric. You can also filter the cable map by device name, device type, device role, device state, cable state, interface state, or BGP state.

NEW QUESTION # 46

What are two formats that the cabling map can be exported as? (Choose two.)

- A. HTML
- **B. JSON**
- **C. CSV**
- D. XML

Answer: B,C

NEW QUESTION # 47

IBA probes analyze telemetry data from specified devices within a blueprint. Which component identifies devices that supply data for a specific probe?

- A. search engine
- **B. graph query**
- C. data selector
- D. processor

Answer: B

Explanation:

A graph query is a component that identifies devices that supply data for a specific probe. A graph query is an expression that matches nodes in the Apstra graph database based on their attributes, such as device name, role, type, or tag. A graph query can be used to select the source devices for the input processors of a probe, as well as to filter the data by device attributes in the subsequent processors of a probe.

NEW QUESTION # 48

You are adding a new switch to Juniper Apstra software. The Managed Devices page shows the "0 OS- Quarantined" status. What is the proper next step to make the device ready for use in a blueprint?

- A. Take the device out of maintenance mode.
- B. Install the agent for the device.
- C. Take the device out of drain state.
- **D. Acknowledge the device.**

Answer: D

Explanation:

When a new switch is added to Juniper Apstra software, it initially shows the "0 OS-Quarantined" status, which means that the device is not yet managed by Apstra and has not been assigned to any blueprint. The proper next step to make the device ready for use in a blueprint is to acknowledge the device, which is a manual action that confirms the device identity and ownership. Acknowledging the device changes its status to "OOS-Ready", which means that the device is ready to be assigned to a blueprint and deployed.

NEW QUESTION # 49

How does Intent-Based Analytics align with the principles of intent-based networking in terms of data exploration and analysis?

- A. By facilitating dynamic queries for intent-based data exploration
- B. By providing real-time weather updates for the data center location
- C. By predicting future changes in the network environment
- D. By managing employee property allocations in the data center

Answer: A

NEW QUESTION # 50
