

# Microsoft AZ-700 Exam Fee - Composite Test AZ-700 Price

BONUS!!! Download part of BraindumpsIT AZ-700 dumps for free: [https://drive.google.com/open?id=1ef2GR9YC3wEtrGAEFw2B2KyYnvcuH\\_u](https://drive.google.com/open?id=1ef2GR9YC3wEtrGAEFw2B2KyYnvcuH_u)

Our AZ-700 training materials are designed to help users consolidate what they have learned, will add to the instant of many training the user can test their learning effect in time after finished the part of the learning content, have a special set of wrong topics in our AZ-700 guide torrent, enable users to find their weak spot of knowledge in this function, iterate through constant practice, finally reach a high success rate. As a result, our AZ-700 study questions are designed to form a complete set of the contents of practice can let users master knowledge to pass the AZ-700 exam.

## Exam Details for You to Know

Knowing more about the AZ-700 Exam, its content falls into 5 parts. Each part is dedicated to a specific topic and checks definite skills. The first topic refers to the design, implementation, and managing hybrid networking. This implies that you possess skills to design, apply and operate a site-to-site VPN connection and a point-to-site VPN connection. Thus, you should be proficient in dealing with such concepts as a site-to-site VPN connection, VNet gateway, policy-based VPN, IPsec policy, local and virtual network gateways. In addition, your knowledge of how to plan RADIUS authentication, Open VPN authentication, Azure AD authentication will be checked. To add more, your skills in dealing with Azure ExpressRoute will be measured. So, be ready to demonstrate your ability to work with ExpressRoute SKU, ExpressRoute Global Reach, ExpressRoute FastPath, private and Microsoft peering.

The second topic focuses on the design and implementing core networking infrastructure. Here, you are expected to deal with private IP addressing for VNets, implementing name resolution, applying cross-VNet connectivity, and an Azure Virtual WAN architecture. In this domain, you should be capable of creating a VNet, configuring subnetting for services and Azure Route Server, creating subnet delegation, public and private DNS zones, and applying VNet peering. You also must be able to design an Azure Virtual WAN architecture, create a network virtual appliance, a hub in Virtual WAN, and a connection unit.

The third topic aims to check your skills in routing design and implementation. In this part, you will be tested on your ability to create, apply, and operate VNet routing, design and deal with an Azure Load Balancer, design and utilize Azure Application Gateway. In addition, you also should have the skills necessary to apply Azure Front Door and an Azure Traffic Manager profile, and create and apply an Azure Virtual Network NAT.

The fourth topic is centered on securing and monitoring networks. In this part, you should have skills to design, implement, operate an Azure Firewall deployment, implement and operate network security groups, WAF deployment. The potential candidates have to know how to monitor networks, including configuring network health alerts, using Traffic Analytics, configuring NSG flow logs and Azure Network Watcher.

The fifth topic aims to check your skills to design and implement private access to Azure Services. Here, your skills in using Azure

Private Link service, Azure Private Endpoint, and service endpoints will be checked. You will need to demonstrate your ability to plan and create private endpoints, create a Private Link service, along with access to private endpoints. The following subtopic revolves around your expertise in configuring VNet integration for the given platform as a PaaS service. So, you should be experienced in how to configure App Service for regional VNet integration, create AKS, and access App Service Environment by configuring clients.

## **Well-Prepared AZ-700 Exam Fee & Leading Offer in Qualification Exams & Updated Microsoft Designing and Implementing Microsoft Azure Networking Solutions**

With the help of our AZ-700 study guide, you can adjust yourself to the exam speed and stay alert according to the time-keeper that we set on our AZ-700 training materials. Therefore, you can trust on our AZ-700 exam materials for this effective simulation function will eventually improve your efficiency and assist you to succeed in the AZ-700 Exam. And we believe you will pass the AZ-700 exam just like the other people!

### **Microsoft Azure AZ-700 Exam Learning Process**

Before you begin your Microsoft AZ-700 exam training, it is important to first determine the level of difficulty of this certification exam. Probes can also be used to monitor and analyze network activity. Simple network management protocol can be used to monitor and analyze the network connection. Inbound proxy settings can be used to block all the Internet traffic that an individual does not need. New features of Microsoft Azure can be accessed from a Windows Server 2012 R2 computer. Configure the internet router to restrict the range of the company network. Routes can be used to monitor and analyze network activity. Exam guarantee can be used to ensure that the identity of a person is protected. Verify that the database is properly contactable by HTTPS. Almost all customers will need a Microsoft Resolve subscription to use a computer that holds virtual machines. The use of multiple computers can make it easier for an individual to make their organizations projects run smoothly. **Microsoft AZ-700 Dumps** can make it easier for an individual to make their organizations projects run smoothly. Before beginning your AZ-700 training, it is crucial that you determine the level of difficulty. Requests sent to the Internet can be used to monitor and analyze network activity. Uptime can assist an individual with making their organizations projects run smoothly. Logs from the cloud can be used to obtain any type of file an individual might need. Integrate an organizations Active Directory with Microsoft Azure can make it easier for an individual to make their organizations projects run smoothly.

Verify that the database is properly contactable by HTTPS. Select the proper Microsoft Azure subscription can make it easier for an individual to make their organizations projects run smoothly. Code can also be used to monitor and analyze network activity. Before beginning your AZ-700 training, it is important that you determine the level of difficulty. Integration of Active Directory with Microsoft Azure can make it easier for an individual to make their organizations projects run smoothly. Advancement in technologies have made it easier to manage your organizations projects. Resolution of a problem can be used to monitor and analyze network activity. Sometimes a persons computer may experience a system crash. Compute agility can make it easier for an individual to make their organizations projects run smoothly. Links PAP2T router can be used to restrict the range of the company network. The use of a wireless-compatible network can make it easier for an individual to make their organizations projects run smoothly. Policies can also be used to monitor and analyze network activity. Consolidation of servers can be used to monitor and analyze network activity. The use of Microsoft Azure can assist an individual in making their organizations projects run smoothly. Post fix can be used to monitor and analyze network activity. The use of a wireless-compatible network can make it easier for an individual to make their organizations projects run smoothly. Balancing workloads can make it easier for an individual to make their organizations projects run smoothly.

To pass the AZ-700 exam, you must have a strong understanding of Azure networking concepts and be familiar with various Azure networking services. You must also possess hands-on experience in designing and implementing Azure networking solutions. AZ-700 exam is intended for network architects, network engineers, and other IT professionals who work with Azure networking solutions.

### **Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q220-Q225):**

#### **NEW QUESTION # 220**

You have an Azure subscription that contains the virtual machines shown in the following table.

Name	Virtual network	Subnet	Workload
SQL1	VNet1	Subnet1	Microsoft SQL Server 2019
Web1	VNet1	Subnet1	IIS
Web2	VNet1	Subnet2	IIS
SQL2	VNet2	Subnet1	Microsoft SQL Server 2019
Web3	VNet2	Subnet1	IIS
SQL3	VNet2	Subnet2	Microsoft SQL Server 2019

VNet1 and VNet2 are NOT connected to each other.

You need to block traffic from SQL Server 2019 to IIS by using application security groups. The solution must minimize administrative effort.

How should you configure the application security groups? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area:  Microsoft

Minimum number of application security groups:

1
2
3
6

Minimum number of application security group assignments:

1
2
3
6

Answer:

Explanation:

Answer Area:

Minimum number of application security groups:

1
2
3
6

Minimum number of application security group assignments:

1
2
3
6

 Microsoft

NEW QUESTION # 221

You have an Azure firewall shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

On Firewall1, forced tunneling [answer choice]

	▼
is enabled already	
cannot be enabled	
is disabled but can be enabled	

On Firewall1, management by Azure Firewall Manager [answer choice]

	▼
is enabled already	
cannot be enabled	
is disabled but can be enabled	

**Answer:**

Explanation:

On Firewall1, forced tunneling [answer choice]

On Firewall1, management by Azure Firewall Manager [answer choice]

Microsoft

is enabled already  
cannot be enabled  
is disabled but can be enabled

is enabled already  
cannot be enabled  
is disabled but can be enabled

**NEW QUESTION # 222**

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Currently, VM5 can resolve names in zone2.contoso.com.	<input type="radio"/>	<input type="radio"/>
VM4 has an automatic registration in zone1.contoso.com.	<input type="radio"/>	<input type="radio"/>
You can link zone2.contoso.com to Vnet3 and enable auto registration.	<input type="radio"/>	<input type="radio"/>

**Answer:**

Explanation:

Statements	Yes	No
Currently, VM5 can resolve names in zone2.contoso.com.	<input type="radio"/>	<input checked="" type="radio"/>
VM4 has an automatic registration in zone1.contoso.com.	<input checked="" type="radio"/>	<input type="radio"/>
You can link zone2.contoso.com to Vnet3 and enable auto registration.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Statements	Yes	No
Currently, VM5 can resolve names in zone2.contoso.com.	<input type="radio"/>	<input checked="" type="radio"/>
VM4 has an automatic registration in zone1.contoso.com.	<input checked="" type="radio"/>	<input type="radio"/>
You can link zone2.contoso.com to Vnet3 and <b>enable</b> auto registration.	<input type="radio"/>	<input checked="" type="radio"/>

Box 1: No

Zone2.contoso.com is not linked to any virtual networks. Therefore, no VMs are able to resolve names in the zone.

Box 2: Yes

VM4 is in VNet3. Zone1.contoso.com has a link to VNet3 and auto-registration is enabled on the link.

Box3: No

VNet3 is linked to zone1.contoso.com and auto-registration is enabled on the link. A virtual network can only have one registration zone. You can link zone2.contoso.com to VNet3 but you won't be able to enable auto- registration on the link.

### NEW QUESTION # 223

You have an Azure virtual network and an on-premises datacenter.

You need to implement a Site-to-Site VPN connection between the datacenter and the virtual network.

Which two resources should you create? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. Azure Web Application Firewall (WAF)
- B. Azure Firewall
- C. a virtual network gateway
- D. an Azure application gateway
- E. a local network gateway
- F. an on-premises data gateway
- G. a user-defined route

**Answer: E,G**

### NEW QUESTION # 224

You have an Azure subscription that contains a resource group named RG1 and a virtual network named VNet1.

You need to deploy Azure Firewall to RG1. The solution must minimize administrative effort.

What should you do first?

- A. On VNet1, create virtual subnet named AzureFirewallSubnet
- B. Create a new virtual network named AzureFirewallNetwork.
- C. Create a new resource group named AzurFirewellRescurceGroup.
- D. Create a secured virtual hub named AzureFirewallHub.

**Answer: A**

Explanation:

The first step is to create the AzureFirewallSubnet in VNet1 to meet the prerequisites for deploying Azure Firewall.
