

2026 NCP-US-6.5 Latest Braindumps Ppt | Reliable 100% Free Certification NCP-US-6.5 Training

2026 Latest ValidExam NCP-US-6.5 PDF Dumps and NCP-US-6.5 Exam Engine Free Share: https://drive.google.com/open?id=127Iy8uUf_krcpb2s6ixOhvcNpBKzP4Fy

There is no denying that no exam is easy because it means a lot of consumption of time and effort. Especially for the upcoming NCP-US-6.5 exam, although a large number of people to take the exam every year, only a part of them can pass. If you are also worried about the exam at this moment, please take a look at our NCP-US-6.5 Study Materials, whose content is carefully designed for the NCP-US-6.5 exam, rich question bank and answer to enable you to master all the test knowledge in a short period of time.

Furthermore, there are up to 12 months of free real Nutanix NCP-US-6.5 exam questions updates available at ValidExam. In conclusion, if your goal is to pass the Nutanix NCP-US-6.5 exam on your first attempt, the ValidExam platform is the ideal choice. With its comprehensive support and a money-back guarantee, as well as its expertly developed Nutanix NCP-US-6.5 Practice Exam, you can feel confident and prepare successfully for the Nutanix NCP-US-6.5 test.

2026 Newest NCP-US-6.5: Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Latest Braindumps Ppt

With ValidExam, you don't have to waste money, because we offer up to 365 days of free updates of actual NCP-US-6.5 exam questions. These free updates of valid Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) exam dumps will help you keep preparing as per the new updates. Are you still confused about the authenticity of PDF or Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) practice exam software? No problem. Visit ValidExam try a free demo version of Nutanix NCP-US-6.5 Exam Dumps for your satisfaction. Moreover, the Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) exam study material of ValidExam are cost-effective. You should not miss this golden chance and buy updated and real Nutanix NCP-US-6.5 exam dumps at an affordable price.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q53-Q58):

NEW QUESTION # 53

What are two ways to manage Objects? (Choose two.)

- A. CLI
- B. PC
- C. SSH
- D. API

Answer: B,D

Explanation:

There are two ways to manage Objects: PC (Prism Central) and API (Application Programming Interface). PC is a web-based user interface that allows administrators to create, configure, monitor, and manage Objects clusters, buckets, users, and policies. API is a set of S3-compatible REST APIs that allows applications and users to interact with Objects programmatically. API can be used to perform operations such as creating buckets, uploading objects, listing objects, downloading objects, deleting objects, and so on. Reference: Nutanix Objects User Guide; Nutanix Objects API Reference Guide

NEW QUESTION # 54

Which two platform are currently supported for Smart Tiering? (Choose two.)

- A. Azure Blob
- **B. AWS Standard**
- C. Google Cloud Storage
- D. Wasabi

Answer: B

Explanation:

The two platforms that are currently supported for Smart Tiering are AWS Standard and Azure Blob. Smart Tiering is a feature that allows administrators to tier data from Files to cloud storage based on file age, file size, and file type. Smart Tiering can help reduce the storage cost and optimize the performance of Files.

Smart Tiering currently supports AWS Standard and Azure Blob as the cloud storage platforms, and more platforms will be added in the future. References: Nutanix Files Administration Guide, page 99; Nutanix Files Solution Guide, page 11

NEW QUESTION # 55

An administrator created a bucket for an upcoming project where internal users as well as an outside consultant Object Browser. The administrator needs to provide both internal and consultant access to the same bucket.

The organization would like to prevent internal access to the consultant, based on their security policy.

Which two items are requires to fulfill this requirement (Choose two.)

- A. Install third-party software for bucket access to all users.
- **B. Configure Directory Services under the Access Keys section**
- **C. Generate access keys based on directory and email-based users.**
- D. Generate access keys using third-party software.

Answer: B,C

Explanation:

Nutanix Objects supports directory services integration, which allows administrators to configure access keys based on directory and email-based users. This enables granular access control and security for buckets and objects. The administrator can configure directory services under the Access Keys section in Prism Central, and then generate access keys for internal users from the directory service and for the consultant from an email address². NEW QUESTION # 56

An administrator is trying to create a Distributed Share, but the Use Distributed Share/Export type instead of Standard option is not present when creating the share.

What is most likely the cause for this?

- **A. The file server resides on a single node cluster.**
- B. The cluster is configured with hybrid storage
- C. The cluster only has three nodes.
- D. The file server does not have the correct license

Answer: A

Explanation:

The most likely cause for this issue is that the file server resides on a single node cluster. A distributed share is a type of SMB share or NFS export that distributes the hosting of top-level directories across multiple FSVMs, which improves load balancing and

performance. A distributed share cannot be created on a single node cluster, because there is only one FSVM available. A distributed share requires at least two nodes in the cluster to distribute the directories. Therefore, the option to use distributed share/export type instead of standard is not present when creating a share on a single node cluster. Reference: Nutanix Files Administration Guide, page 33; Nutanix Files Solution Guide, page 8

NEW QUESTION # 57

An organization currently has two Objects instances deployed between two sites. Both instances are managed via manage the same Prism Central to simplify management.

The organization has a critical application with all data in a bucket that needs to be replicated to the secondary site for DR purposes. The replication needs to be asynchronous, including all delete the marker versions.

- A. Leverage the Objects Baseline Replication Tool from a Linux VM
- **B. Create a Bucket replication rule, set the destination Objects instances.**
- C. Use a protection Domain to replicate the objects Volume Group.
- D. With Object Browser, upload the data at the destination site.

Answer: B

Explanation:

The administrator can achieve this requirement by creating a bucket replication rule and setting the destination Objects instance.

Bucket replication is a feature that allows administrators to replicate data from one bucket to another bucket on a different Objects instance for disaster recovery or data migration purposes.

Bucket replication can be configured with various parameters, such as replication mode, replication frequency, replication status, etc. Bucket replication can also replicate all versions of objects, including delete markers, which are special versions that indicate that an object has been deleted. By creating a bucket replication rule and setting the destination Objects instance, the administrator can replicate data from one Objects instance to another asynchronously, including all delete markers and versions. References: Nutanix Objects User Guide, page 19; Nutanix Objects Solution Guide, page 9 Nutanix Objects, part of Nutanix Unified Storage (NUS), supports replication of buckets between Object Store instances for disaster recovery (DR). The organization has two Objects instances across two sites, managed by the same Prism Central, and needs to replicate a bucket's data asynchronously, including delete marker versions, to the secondary site.

Analysis of Options:

* Option A (With Object Browser, upload the data at the destination site): Incorrect. The Object Browser is a UI tool in Nutanix Objects for managing buckets and objects, but it is not designed for replication. Manually uploading data to the destination site does not satisfy the requirement for asynchronous replication, nor does it handle delete marker versions automatically.

* Option B (Leverage the Objects Baseline Replication Tool from a Linux VM): Incorrect. The Objects Baseline Replication Tool is not a standard feature in Nutanix Objects documentation. While third-party tools or scripts might be used for manual replication, Nutanix provides a native solution for bucket replication, making this option unnecessary and incorrect for satisfying the requirement.

* Option C (Use a Protection Domain to replicate the Objects Volume Group): Incorrect. Protection Domains are used in Nutanix for protecting VMs and Volume Groups (block storage) via replication, but they do not apply to Nutanix Objects. Objects uses bucket replication rules for DR, not Protection Domains.

* Option D (Create a Bucket replication rule, set the destination Objects instance): Correct. Nutanix Objects supports bucket replication rules to replicate data between Object Store instances asynchronously. This feature allows the organization to replicate the bucket to the secondary site, including all versions (such as delete marker versions), as required. The replication rule can be configured in Prism Central, specifying the destination Object Store instance, and it supports asynchronous replication for DR purposes.

Why Option D?

Bucket replication in Nutanix Objects is the native mechanism for asynchronous replication between Object Store instances. It supports replicating all versions of objects, including delete marker versions (which indicate deleted objects in a versioned bucket), ensuring that the secondary site has a complete replica of the bucket for DR. Since both Object Store instances are managed by the same Prism Central, the administrator can easily create a replication rule to meet the requirement.

Exact Extract from Nutanix Documentation:

From the Nutanix Objects Administration Guide (available on the Nutanix Portal):

"Nutanix Objects supports asynchronous bucket replication for disaster recovery. To replicate a bucket to a secondary site, create a bucket replication rule in Prism Central, specifying the destination Object Store instance. The replication rule can be configured to include all versions, including delete marker versions, ensuring that the secondary site maintains a complete replica of the bucket for DR purposes."
