Adobe Experience Manager Architect Master Sample Questions (Q14-Q19):

NEW QUESTION # 14

An AEM Architect is moving existing content from an on-premise AEM to an AEM Cloud Service instance using the Content Transfer Tool. As part of the initial source preparation, the Architect is going to run the offline compaction on the on-premise AEM. What other two actions should the Architect do to the on-premise AEM before proceeding with the extraction phase? (Choose two.)

- A. Run datastore consistency check via oak-run
- B. Verify that free disk space is at least 1.5x the JCR size
- C. Stop all bundles using the AEM Web Console

- D. Verify that wipe mode is enabled
- E. Validate that all replication agents are disabled

Answer: A,E

Explanation:

According to Adobe Experience Manager documentation¹, before using the Content Transfer Tool, it is recommended to disable all replication agents on the source AEM instance to prevent any content changes during the migration process. It is also recommended to run a datastore consistency check via oak-run tool² to ensure that there are no missing or corrupted binaries in the source AEM instance.

NEW QUESTION # 15

A user is part of the Employees LDAP group synchronized with AEM. The same user is added to the authors group in AEM. The user is then removed from the Employees group on the LDAP server.

What is the result during the next synchronization with AEM?

- A. The user is not removed from either the Employees and the AEM authors groups
- B. The user is removed from the Employees group but not the authors group in AEM
- C. The user is removed from the authors group but not the Employees group in AEM
- D. The user is removed from both the Employees and the AEM authors groups

Answer: D

Explanation:

"if a user is removed from an LDAP group that has been synchronized with AEM, then that user will be removed from all AEM groups that they are a member of".

NEW QUESTION # 16

A media company surveys the end users of their AEM Sites website. The survey identifies that it is difficult to locate content on the site due to lack of relevancy and slow performance when navigating through the large volume of content.

To address both issues, the business team suggests integrating an innovative taxonomy product to the company's AEM implementation. The product is new on the market and the development team has no experience with the technology.

Which two steps should an Architect recommend to evaluate this new feature? (Choose two.)

- A. Test usability of the feature with selected business users
- B. Develop the integration as proof of concept with sample content
- C. Develop the integration and deploy it to 50% of the production AEM instances
- D. Test usability of the feature with selected end users
- E. Develop the integration as proof of concept with full production content

Answer: A,E

NEW QUESTION # 17

A customer's DAM and Sites is growing exponentially while preparing for a go-live. The AEM architect has noticed that the online compaction on the author failed yesterday and finds this log entry:

```
INFO [pool-23-thread-1] com.adobe.granite.maintenance.impl.MaintenanceJobsManagerImpl Name='RevisionCleanupTask', Status='ERROR', Result='Revision GC: Stopped by user.',
```

```
Details='{\"created\":1668218400006,\"started\":1668218400006,\"finished\":1668229200598,\"duration\":10800592}'
```

What step would the architect take to resolve this issue for the production environment with no downtime?

- A. Perform an offline compaction
- B. Configure the full compaction to run on weekdays
- C. Manually run the online compaction
- D. Increase the daily maintenance window

Answer: D
