Many candidates get nervous because they don't know what will happen in the final Certification Preparation for Advanced Administrator CRT-211 exam. Taking CRT-211 exam dumps from Pass4sures helps eliminate exam anxiety. Pass4sures has designed this set of real Salesforce CRT-211 PDF Questions in accordance with the CRT-211 exam syllabus and pattern. You can gain essential knowledge and clear all concepts related to the final exam by using these CRT-211 practice test questions.

## Salesforce Certification Preparation for Advanced Administrator Sample Questions (Q206-Q211):

## NEW QUESTION # 206

AW Computing has implemented the Contacts to Multiple Accounts functionality. Users should be able to distinguish between contacts and related contacts.

What should the administrator do to configure the account page layout?

- A. Display the related contacts related list and add the direct field.
- B. Display the related accounts related list on the page layout.
- C. Display the contacts related list and add the related field.
- D. Display both the contacts and the related contacts related lists.

**Answer: A**

Explanation:

Displaying the related contacts related list and adding the direct field will allow users to distinguish between contacts and related contacts. The related contacts related list shows all contacts that are related to an account, either directly or indirectly. The direct field indicates whether a contact is directly associated with an account or not. By adding this field to the related list, users can easily see which contacts are direct and which are not. Reference: [https://help.salesforce.com/s/articleView?id=sf.contacts\\_multiple\\_accounts.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.contacts_multiple_accounts.htm&type=5)

[https://help.salesforce.com/s/articleView?id=sf.contacts\\_multiple\\_accounts\\_direct\\_field.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.contacts_multiple_accounts_direct_field.htm&type=5)

## NEW QUESTION # 207

At Ursula Major Solar, there is an account owner by a user with the role of Galaxy manager. Two users with the same profile are both assigned to the sub-role, Galaxy Subordinate. However, only one can access the account.

What is the reason only one user can see the account record?

- A. Manual Sharing
- B. Workflow Rule
- C. Role Hierarchy
- D. Queues

**Answer: A**

Explanation:

Manual sharing is a way of granting access to individual records by manually sharing them with other users, roles, or groups. Manual sharing can override the organization-wide default and role hierarchy settings and give additional access to specific records. In this case, manual sharing could be the reason why only one user can see the account record, even though they have the same profile and role as another user who cannot see it. Reference: [https://help.salesforce.com/s/articleView?id=sf.security\\_sharing\\_manual.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.security_sharing_manual.htm&type=5)

## NEW QUESTION # 208

What should the administrator consider before enabling Person Accounts?

- A. Person Account requires less data storage.
- B. Person Account cannot be disabled.
- C. Person Account and Business Accounts cannot be in the same sharing model.
- D. All standard Account news can be converted to Person Account field.

**Answer: B**

## NEW QUESTION # 209

Cloud Kicks users need to link multiple Case records to multiple Outcome records stored in a custom object.

Any user that can view the Case record must be able to create a link. The administrator creates a Case Outcome custom object.

What is the recommended option to use when adding a field to Case Outcome?

- A. Master-detail relationship with Read/Write sharing setting
- B. Lookup relationship with Read/Write sharing setting
- C. Master-detail relationship with Read-Only sharing setting.
- D. Lookup relationship with Ready-Only sharing setting.

## Answer: B

Explanation:

A lookup relationship with Read/Write sharing setting is the recommended option to use when adding a field to Case Outcome custom object. A lookup relationship is a type of relationship that links two objects together and allows users to associate one record with another. A lookup relationship does not affect the security or deletion of either record and can be optional or required. In this case, you can create a lookup relationship field on Case Outcome object that references Case object and allows users to link multiple Case records to multiple Case Outcome records. You can also set the sharing setting for the lookup field to Read/Write, which means that users who have access to the parent record can also access and edit the child record. References:

[https://help.salesforce.com/s/articleView?id=sf.relationships\\_lookup.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.relationships_lookup.htm&type=5) [https://help.salesforce.com/s/articleView?id=sf.relationships\\_considerations\\_lookup.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.relationships_considerations_lookup.htm&type=5)

## NEW QUESTION # 210

The administrator at Universal Containers does a soft launch of the Salesforce Authenticator app and allows users to optionally use it to log in. The administrator would now like to look at how many users have successfully used it since it was rolled out.

What are two ways the administrator can get this information?

Choose 2 answers

- A. Open the Login Access Policies in Setup which shows how many users are using MFA.
- B. The order of flow execution is unpredictable
- C. Create a new view in Identity Verification History, specifying Method.
- D. Run a session setting report, specifying login methods by user.

## Answer: C,D

Explanation:

Salesforce Authenticator is an app that allows users to verify their identity when logging in to Salesforce using two-factor authentication (2FA). 2FA adds an extra layer of security by requiring users to enter a verification code or approve a notification on their mobile device after entering their username and password.

To look at how many users have successfully used Salesforce Authenticator since it was rolled out, an administrator can use two ways:

A) Run a session setting report, specifying login methods by user.

A session setting report is a report that shows information about users' login sessions, such as login time, location, IP address, browser, platform, etc. A session setting report can also show the login methods used by users, such as password, verification code, or notification. By running a session setting report, specifying login methods by user, an administrator can see how many users have used Salesforce Authenticator to log in to Salesforce. Reference: [https://help.salesforce.com/s/articleView?id=sf.reports\\_session.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.reports_session.htm&type=5)

C) Create a new view in Identity Verification History, specifying Method.

Identity Verification History is a page that shows the history of identity verification attempts for each user in the org. Identity verification history includes information such as date, time, status, method, and IP address of each attempt. By creating a new view in Identity Verification History, specifying Method as a filter criterion, an administrator can see how many users have used Salesforce Authenticator to verify their identity when logging in to Salesforce. Reference: [https://help.salesforce.com/s/articleView?id=sf.identity\\_verification\\_history.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.identity_verification_history.htm&type=5)

## NEW QUESTION # 211

.....
