

Practice 3V0-23.25 Test, 3V0-23.25 Practice Guide

The VMware 3V0-23.25 is available in three easy-to-use forms. The first one is VMware 3V0-23.25 dumps PDF format. It is printable and portable. You can print Advanced VMware Cloud Foundation 9.0 Storage (3V0-23.25) questions PDF or access them via your smartphones, tablets, and laptops. The PDF format can be used anywhere and is essential for students who like to learn on the go.

Let me tell the advantages of using the 3V0-23.25 practice engine. First of all, 3V0-23.25 exam materials will combine your fragmented time for greater effectiveness, and secondly, you can use the shortest time to pass the exam to get your desired certification. Our 3V0-23.25 Study Materials allow you to improve your competitiveness in a short period of time. With the help of our 3V0-23.25 guide prep, you will be the best star better than others.

PrepAwayPDF 3V0-23.25 Cert Guide

Wrong topic tend to be complex and no regularity, and the 3V0-23.25 torrent prep can help the users to form a good logical structure of the wrong question, this database to each user in the simulation in the practice of all kinds of wrong topic all induction and collation, and the 3V0-23.25 study question then to the next step in-depth analysis of the wrong topic, allowing users in which exist in the knowledge module, tell users of our 3V0-23.25 Exam Question how to make up for their own knowledge loophole, summarizes the method to deal with such questions for, to prevent such mistakes from happening again.

VMware Advanced VMware Cloud Foundation 9.0 Storage Sample Questions (Q82-Q87):

NEW QUESTION # 82

A Network Administrator and Storage team are deploying a VCF Workload Domain with vSAN Data Protection configured for "Remote Replication" to a secondary cluster.

The security policy mandates Data-at-Rest Encryption for all production VMs.

...

```
# SPBM Policy: "Prod-Encrypted-DP"
```

```
[Capabilities]
```

```
Host.FailuresToTolerate: 1 (RAID-1)
```

```
Data.Encryption: Enabled (KMS-Prod)
```

```
DataProtection.RemoteTarget: "Sec-Site-Cluster"
```

```
DataProtection.RPO: 30 minutes
```

...

A VM is instantiated with this policy. A remote snapshot is successfully taken and replicated to the Sec- Site-Cluster.

How does the interaction between vSAN Native Encryption, SPBM, and Data Protection snapshots function to secure the data at the secondary site? (Select all that apply.)

- A. The SPBM policy ensures that the replicated snapshot object on the secondary site inherits the equivalent "Encrypted" storage capability, assuming the target datastore has vSAN encryption enabled.
- B. The snapshot payload is decrypted on the source site, transferred over the network in cleartext, and re-encrypted on the target site using the secondary cluster's local KMS key.
- C. vSAN Native Encryption is a datastore-level setting; the snapshots residing on the secondary cluster are protected by the encryption key specific to the *target* datastore, not the source VM's key.
- D. The snapshot data remains in its native, block-level format during replication; therefore, if vSAN Data- in-Transit (DiT) encryption is enabled between sites, the traffic is secured regardless of the VM's storage policy.

Answer: A,C,D

NEW QUESTION # 83

An Operations Engineer is managing a VCF Stretched Cluster configured with "Dual Site Mirroring" across Site A and Site B, plus a Witness.

A severe network failure causes "Total Site Isolation" at Site A. Site A completely loses network connectivity to BOTH Site B (the ISL drops) AND the remote Witness Appliance. Site A retains power and local networking.

...

```
# vSAN Unicast Agent Status (Post-Failure Snapshot)
```

```
Site A Hosts -> Can only ping Site A Hosts.
```

```
Site B Hosts -> Can ping Site B Hosts AND Witness.
```

...

How do the Unicast Partition Groups and vSphere HA mechanics interact to resolve this specific Disaster Recovery scenario? (Select all that apply.)

- A. Site B and the Witness form the majority Partition Group (66% of votes). The DOM verifies quorum and makes the Site B data active.
- B. Virtual machines on Site A will continue to run normally using their local SSD cache to absorb writes indefinitely until the network is restored.
- C. vSphere HA detects that Site A's VMs have lost their datastore and network, triggering a cold restart of all Site A Virtual Machines onto the surviving compute hosts at Site B.
- D. Site A forms its own local Partition Group, but because it holds less than 50% of the votes (no Site B, no Witness), DOM strips quorum, locking all storage access for the VMs on Site A.
- E. The vCenter Server automatically forces the Witness Appliance to migrate to Site A to re-establish quorum.

Answer: A,C,D

NEW QUESTION # 84

An L3 Support Engineer is replacing a failed NVMe drive on a vSAN ESA host in a VCF Workload Domain.

The engineer physically swaps the failed drive with a brand new, enterprise-grade 7.68 TB NVMe device.

However, SDDC Manager and vCenter refuse to automatically claim the drive into the vSAN Storage Pool.

The engineer checks the Ruby vSphere Console (RVC) output:

...

```
[RVC Output: vsan.disks_stats ~cluster]
```

Device Name	Status	State	Capacity	HCL Compliance
naa.5000a...	In-Use	OK	3.84 TB	Yes
naa.5000b...	In-Use	OK	3.84 TB	Yes
naa.5000x...	Unclaimed	Eligible	7.68 TB	No (Firmware)

What combination of root cause analysis and procedural steps is required to successfully integrate this new drive and restore the cluster to full health? (Select all that apply.)

- A. The vSAN HCL (Hardware Compatibility List) database on the vCenter Server is outdated and does not recognize the firmware signature of the newly manufactured NVMe drive.
- B. The new 7.68 TB drive is incompatible with the existing 3.84 TB drives; ESA requires all drives in a pool to be of identical capacity.
- C. Once the HCL database is updated and the firmware is recognized as compliant, the administrator must manually claim the disk into the storage pool, as ESA does not auto-claim post-failure.
- D. The host must be rebooted into Maintenance Mode to allow the NVMe driver module to initialize the new device paths.
- E. The engineer must manually download and update the vSAN HCL database JSON file in vCenter Server to clear the compliance blocker.

Answer: A,C,E

NEW QUESTION # 85

An Infrastructure Manager imports a configuration from the vSAN Sizer tool to deploy a new 4-node vSAN cluster in SDDC Manager. The Sizer projected that the cluster would have 40 TB of usable capacity after FTT=1 (RAID-1) mirroring. However, immediately after SDDC Manager provisions the cluster, the capacity view shows significantly less available space for actual virtual machines than projected.

[SDDC Manager - vSAN Capacity View (Post-Deployment)]

Total Raw Capacity: 80.0 TB
 Total Usable (RAID-1): 40.0 TB
 Operations Reserve (Slack): 4.0 TB
 Host Rebuild Reserve: 10.0 TB
 Free Space for VMs: 26.0 TB

Which TWO factors explain the discrepancy between the "Sizer Projected Usable Space" and the actual "Free Space for VMs" available post-deployment? (Choose 2.)

- A. The Sizer tool assumes thin provisioning, but SDDC Manager defaults to thick provisioning for the management virtual machines.
- B. The Host Rebuild Reserve (10.0 TB) is actively withheld by vSAN to ensure the cluster can auto-rebuild if one of the four hosts fails permanently.
- C. The 40 TB projection assumed RAID-5, but SDDC Manager forcibly applied RAID-1, halving the capacity.
- D. The Operations Reserve (Slack Space) is explicitly fenced off to accommodate transient capacity needs for VM snapshots, vMotion, and component merges.

Answer: B,D

NEW QUESTION # 86

A SOC Analyst is investigating a massive CPU utilization spike on a VCF 9.0 ESXi host immediately after a Supplemental NFS v4.1 Datastore was mounted. The principal storage is vSAN ESA.

[Log Snippet: vmkernel.log - ESXi Host]

2026-11-20T11:00:00Z INFO tcp_ip - [NFS] IP Fragmentation event detected.
 2026-11-20T11:00:05Z WARN cpu_sched - [Hostd] CPU 01 saturation: 99% (Processing network interrupts).

The Physical Network switch is configured for standard MTU 1500.

What is strictly causing this configuration to cripple the ESXi host CPU, assuming the storage traffic is high volume? (Select all that apply.)

- **A. The fragmentation and subsequent reassembly of massive NFS payload data consumes astronomical amounts of ESXi CPU cycles (Interrupt Requests), starving the hostd management agent and the vSAN DOM of compute resources.**
- B. The ESXi host automatically triggers a "Deep Rekey" operation when MTU mismatches are detected to ensure the fragmented packets remain encrypted.
- C. The CPU is consumed by the Top-of-Rack switch's native ASIC routing protocol.
- **D. Because the host is sending 9000-byte packets and the physical switch only supports 1500-byte packets, the ESXi network stack is forced to violently fragment every storage packet into 6 smaller packets.**
- **E. The VMkernel port used for the NFS datastore was mistakenly configured with MTU 9000 (Jumbo Frames).**

Answer: A,D,E

NEW QUESTION # 87

.....

By using PrepAwayPDF 3V0-23.25 questions pdf, you will be able to understand the real exam 3V0-23.25 scenario. It will help you get verified 3V0-23.25 answers and you will be able to judge your 3V0-23.25 preparation level for the 3V0-23.25 exam. More importantly, it will help you understand the real Advanced VMware Cloud Foundation 9.0 Storage exam feel. You will be able to check the real exam scenario by using this specific 3V0-23.25 Exam PDF questions. Our 3V0-23.25 experts are continuously working on including new 3V0-23.25 questions material and we provide a guarantee that you will be able to pass the 3V0-23.25 exam on the first attempt.

3V0-23.25 Practice Guide: <https://www.prepawaypdf.com/VMware/3V0-23.25-practice-exam-dumps.html>

Make sure that you are buying our 3V0-23.25 brain dumps pack so you can check out all the products that will help you come up with a better solution, VMware Practice 3V0-23.25 Test Thanks and best of luck in your exam and career, In such a way, our 3V0-23.25 study materials not only target but also cover all knowledge points, We regularly upgrade this VMware 3V0-23.25 practice exam software after receiving valuable feedback from experts worldwide.

In order for you to take ownership of your job as a student, you 3V0-23.25 must first understand what the characteristics of ownership are, But no matter what, make sure you are enjoying the process.

Don't Know Where to Start Your VMware 3V0-23.25 Exam Preparation? We've Got You Covered

Make sure that you are buying our 3V0-23.25 Brain Dumps pack so you can check out all the products that will help you come up with a better solution, Thanks and best of luck in your exam and career!

In such a way, our 3V0-23.25 study materials not only target but also cover all knowledge points, We regularly upgrade this VMware 3V0-23.25 practice exam software after receiving valuable feedback from experts worldwide.

We are providing PDF file for the 3V0-23.25 Advanced VMware Cloud Foundation 9.0 Storage exam questions.
