GIAC Reverse Engineering Malware Sample Questions (Q96-Q101):

NEW QUESTION # 96

Which Windows process is often targeted by malware for process injection techniques?

- A. csrss.exe
- B. explorer.exe
- C. svchost.exe
- D. wininit.exe

Answer: C

NEW QUESTION # 97

You are analyzing an obfuscated malware sample that has been packed using a custom packer. The malware also uses XOR encoding to obfuscate key strings, making static analysis difficult. How would you proceed with the analysis? (Choose three)

- A. Disassemble the packed binary to directly analyze its obfuscated code.
- B. Use a debugger to step through the unpacking process and observe memory locations where the actual code is revealed.
- C. Manually decode the XOR-encoded strings by identifying the key used in the encoding process.
- D. Use network monitoring tools to capture traffic generated by the malware.
- E. Use a dynamic analysis tool like a sandbox to observe the malware's behavior after unpacking.

Answer: B,C,E

NEW QUESTION # 98

What is the purpose of employing anti-disassembly techniques in malware?

- A. To hinder static analysis by analysts and automated tools
- B. To improve compatibility with different system architectures
- C. To optimize the execution speed
- D. To create efficient code

Answer: A

NEW QUESTION # 99

Which of the following statements is true when dealing with malware that employs misdirection through code restructuring?

- A. The malware cannot execute in environments with different CPU architectures.
- B. Dynamic analysis can help reveal the actual execution path that might be obscured in static analysis.
- C. Static analysis alone is usually sufficient to understand the malware's execution flow.
- D. High-level language decompilers will always accurately reconstruct the original source code from such malware.

Answer: B

NEW QUESTION # 100

In the context of malware analysis, what is the significance of identifying a call to the CreateProcess function with the CREATE_SUSPENDED flag?

- A. It is a standard practice for all Windows applications for better performance.
- B. It signifies that the malware may be attempting process hollowing.
- C. It denotes that the malware is self-replicating.
- D. It indicates the creation of a backup copy of the malware.
