You may be taken up with all kind of affairs, and sometimes you have to put down something and deal with the other matters for the latter is more urgent and need to be done immediately. With the help of our AB-900 training guide, your dream won't be delayed anymore.

## Microsoft 365 Copilot & Agent Administration Fundamentals Sample

## Questions (Q30-Q35):

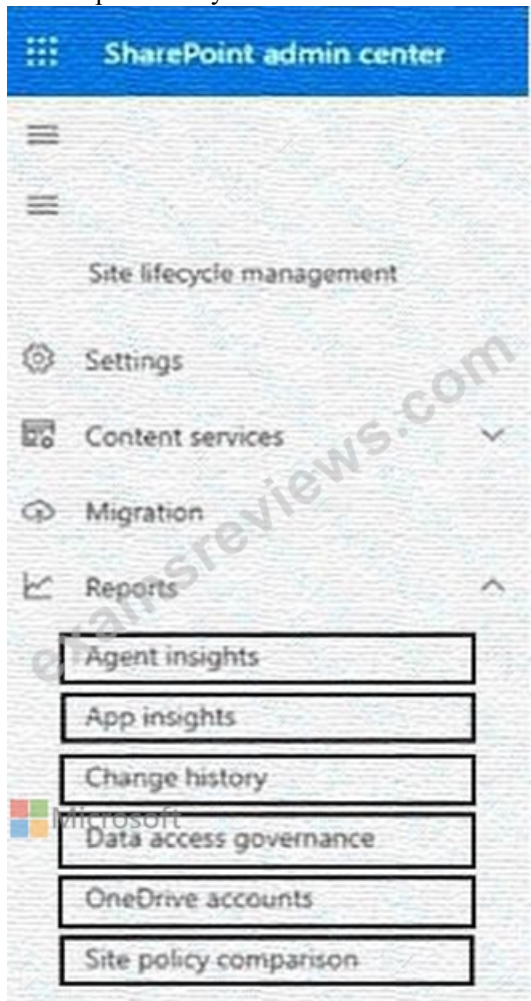

### NEW QUESTION # 30

Your organization has a Microsoft 365 subscription.

You discover that Microsoft SharePoint files are being shared to users outside your organization.

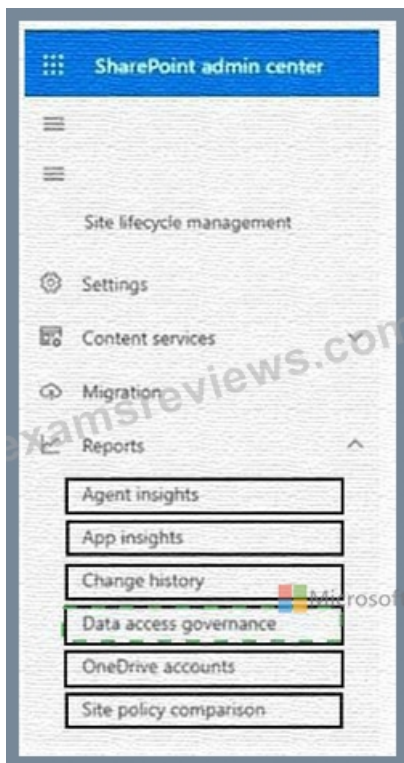

You need to identify which files are being shared to the external users.

Which report should you use in the SharePoint admin center? To answer, select the appropriate report in the answer area.

**Answer:**

**Explanation:**

Explanation:

The correct answer is Data access governance . Microsoft documents that Data access governance reports in the SharePoint admin center help administrators discover overshared or sensitive SharePoint content and assess sharing exposure. More specifically, Microsoft's sharing links activity reports under Data access governance are designed to monitor sharing activity and identify sites where links such as Anyone , People in the organization , and Specific people links have been created. This is the SharePoint admin reporting area Microsoft provides for investigating external sharing patterns and related exposure.

The other listed reports do not fit this requirement. Agent insights is for Copilot/agent usage, App insights is for application-related insights, Change history tracks configuration changes, OneDrive accounts focuses on OneDrive administration, and Site policy comparison compares site settings. None of those is the SharePoint report family intended for identifying externally shared SharePoint content. Based on Microsoft's documentation, the report area you should use is Data access governance .

### NEW QUESTION # 31

You need to identify files and emails that contain social security numbers (SSNs) and credit card numbers. What should you use in the Microsoft Purview portal?

- A. Activity explorer
- **B. Data explorer**
- C. Information Protection reports
- D. Information Protection policies

**Answer: B**

Explanation:

The correct answer is B. Data explorer. Microsoft Learn states that Data explorer in Microsoft Purview shows a current snapshot of items that have been classified as a sensitive information type in your organization.

Microsoft's sensitive information type documentation specifically lists examples such as social security numbers and credit card numbers, which means Data explorer is the appropriate portal feature for identifying files and emails that contain those data types. Data explorer is designed to help administrators see where sensitive data exists across supported Microsoft 365 locations.

The other options are less appropriate for this task. Information Protection reports focus more broadly on label and protection reporting. Information Protection policies are for configuring classification and protection behavior, not for finding existing files and emails containing SSNs or credit card numbers. Activity explorer is primarily used to review user and policy-related activities, such as label changes or DLP events, rather than to provide the direct sensitive-data inventory view requested here. Since the question asks to identify the files and emails containing specific sensitive information types, Microsoft's documented answer is Data explorer.

**NEW QUESTION # 32**

Select the answer that correctly completes the sentence.

You can use the \_\_\_\_\_ Microsoft Purview solution to find all the content that relates to the term "Project Falcon" in the emails exchanged by two users.

**Answer:**

Explanation:

eDiscovery

Explanation:

You can use the eDiscovery Microsoft Purview solution to find all the content that relates to the term "Project Falcon" in the emails exchanged by two users.

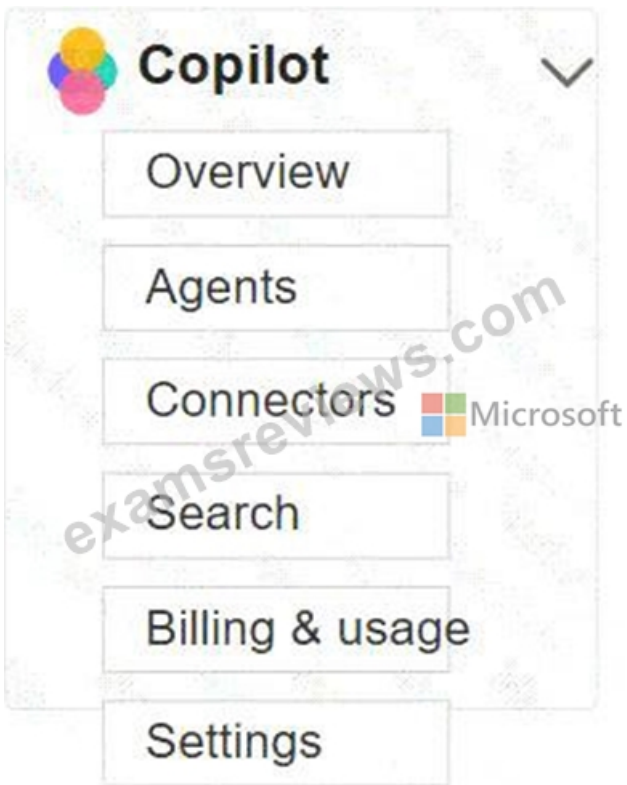

The correct answer is eDiscovery . Microsoft documents that Microsoft Purview eDiscovery is used to search for content in Microsoft 365 data sources that is relevant to an investigation, legal matter, or internal review.

Microsoft specifically states that eDiscovery search can find email messages, documents, instant messages, and other content across Microsoft 365 locations, including Exchange Online mailboxes . This makes it the correct solution for locating content related to a keyword or phrase such as "Project Falcon" in emails exchanged between specific users.

This is different from other Purview solutions such as Communication Compliance, which is designed to monitor risky or inappropriate communications, or Data Lifecycle Management, which is for retention and deletion. The requirement here is targeted search and retrieval of content connected to a specific term in user email communications, which is exactly what eDiscovery is designed to do. Microsoft also notes that eDiscovery supports keyword queries and search conditions , which further aligns with this scenario.

**NEW QUESTION # 33**

You need to ensure that users can use an external system as a knowledge source for custom Microsoft 365 Copilot agents. What should you configure in the Microsoft 365 admin center? To answer, select the appropriate settings in the answer area.

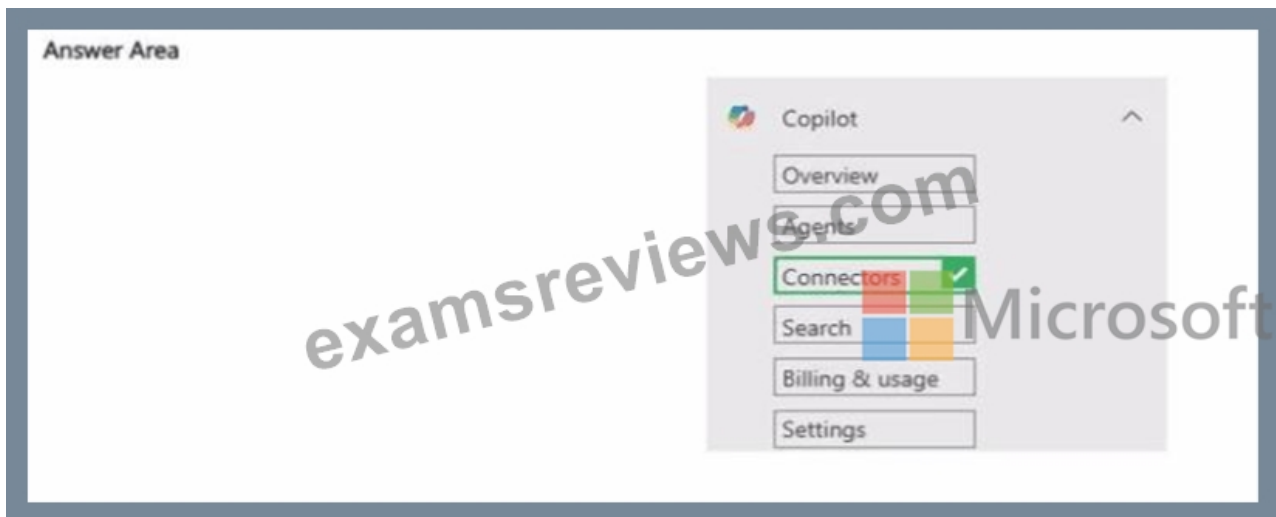

Answer:

Explanation:

Explanation:

The correct answer is Connectors . Microsoft documents that Microsoft 365 Copilot connectors are used to bring external, line-of-business data into Microsoft 365 Copilot so users can search, reason over, and act on content from non-Microsoft systems. Microsoft also states that admins must enable and configure Copilot connectors in the Microsoft 365 admin center , and once configured, those connectors can be selected as knowledge sources for custom agents. This directly matches the requirement to let users use an external system as a knowledge source for custom Microsoft 365 Copilot agents. This is why the hotspot in the Copilot area should be set to Connectors , not Overview, Agents, Search, Billing & usage, or Settings. Overview provides status information, Agents is for agent management, Search is for Microsoft Search experiences, and Billing & usage is for metering and consumption tracking. The specific admin feature that enables external enterprise data sources for agent grounding is Connectors . Microsoft further explains that configured connectors can expose external knowledge securely and respect source-level permissions when used in agent scenarios.

#### NEW QUESTION # 34

The IT administration team at your organization, Contoso Ltd., has acquired a new domain name, contosoglobal.com, and needs to add it to their Microsoft 365 environment. This new domain will be used for all new user principal names (UPNs) and email addresses. Which section of the Microsoft 365 admin center must the administrator use to manage, verify, and set the new domain as the default for new users?

- A. Billing > Licenses > Product List
- B. Setup > Domain setup > Connect domain
- C. Settings > Domains
- D. Settings > Org settings > Services

**Answer: C**

Explanation:

The dedicated Domains section within the Microsoft 365 admin center is the centralized location for adding new custom domains, verifying ownership (typically via TXT or MX records), managing DNS settings, and setting the default domain used for new user provisioning.
