

CDCS Reliable Study Questions | CDCS Valid Study Materials

Solution to CDCS sample question 2

Read the question carefully. Two concepts are tested in this question.

Firstly, from UCP 600 article 3, we come to know that when "after" is used to determine a maturity date or due date, we have to exclude the due date mentioned.

Secondly, from article 20 a (ii), we know that if the bill of lading contains an on board notation indicating the date of shipment, the date of the on board notation will be considered as the date of shipment. This is irrespective of the bill of lading issue date. The BL issue date may be before or after the on board shipment date.

So now in our question, the date of shipment will be the on board date i.e. 18 Feb 2022.

The due date will be 90 days from the date of shipment. i.e. 90 days from 18 Feb 2022. While calculating the due date, we have to exclude this date.

The easiest way to calculate this is in Excel. Put the shipment date in row 1, and the number of days in row 2. Then add these two to get the sum in row 3. 90 days from 18 Feb 2022 is 19 May 2022.

X	18-Feb-22
Y	90
X+Y	19-May-22

However, in the exam hall, you will not have the convenience of MS Excel. You will have to do it manually. Let's see how to do it.

90 days after 18 Feb 2022 = 18 Feb 2022 + 90 days

We have to exclude 18 Feb 2022 while doing the calculation.

There are 10 more days left in February. [Total = 10]

There are 31 days in the month of March. [Total = 10 + 31 = 41]

There are 30 days in the month of April. [Total = 41 + 30 = 71]

Till the end of April, 71 days are already over. Now we only need 19 more days to make it 90 days.

Total = 71 + 19 = 90

So the answer is 19 May 2022. And the correct answer is option D.

P.S. Free & New CDCS dumps are available on Google Drive shared by Test4Cram: https://drive.google.com/open?id=1eSmh0zV020_1WXQbO-K79suN2v-M5hYP

Test4Cram has become the front-runner of this career and help exam candidates around the world win in valuable time. With years of experience dealing with CDCS exam, they have thorough grasp of knowledge which appears clearly in our CDCS exam questions. All CDCS study materials you should know are written in them with three versions to choose from. In case there are any changes happened to the CDCS Exam, the experts keep close eyes on trends of it and compile new updates constantly. It means we will provide the new updates freely for you later.

Propulsion occurs when using our CDCS practice materials. They can even broaden amplitude of your horizon in this line. Of course, knowledge will accrue to you from our CDCS practice materials. There is no inextricably problem within our CDCS practice materials. Motivated by them downloaded from our website, more than 98 percent of clients conquered the difficulties. All contents of CDCS practice materials are being explicit to make you have explicit understanding of this exam. Their contribution is praised for their purview is unlimited.

From CDCS Reliable Study Questions to EXIN EPI Certified Data Centre Specialist, Quickest Way for Passing

The EXIN CDCS certification is one of the top-rated career advancement certifications in the market. This EXIN EPI Certified

Data Centre Specialist (CDCS) certification exam has been inspiring candidates since its beginning. Over this long time period, thousands of CDCS exam candidates have passed their EXIN EPI Certified Data Centre Specialist (CDCS) certification exam and now they are doing jobs in the world's top brands. The Test4Cram CDCS Dumps will provide you with everything that you need to learn, prepare and pass the challenging Network Security Specialist CDCS exam with flying colors. You must try Test4Cram CDCS exam questions today.

EXIN EPI Certified Data Centre Specialist Sample Questions (Q96-Q101):

NEW QUESTION # 96

A battery bank has 800 Ah total capacity. How much charging current should the rectifier be able to supply?

- A. 80 A
- B. 40 A
- C. 160 A
- D. 60 A

Answer: A

Explanation:

Battery charging current is typically sized at 10% of the total Ah capacity to ensure safe charging without overheating.

Charging Current=800Ah×0.1=80A

* 40 A or 60 A would undercharge, extending recovery time after discharge.

* 160 A would be too high, causing heat and reducing battery life.

Thus, 80 A is correct.

References: IEEE Std 1188 (VRLA Battery Maintenance), IEC 60896-21/22 (Stationary Lead-Acid Batteries).

NEW QUESTION # 97

You are allowed to use a calculator for this question. The total power consumption of the ICT equipment in a rack is 6 kW. The equipment is traditional ICT equipment with a Delta-T of approximately 11 °C / 20 °F. Calculate the approximate CFM required to cool the equipment in the rack.

- A. Approximately 160 CFM
- B. Approximately 1,000 CFM
- C. Approximately 500 CFM
- D. Approximately 1,500 CFM

Answer: B

Explanation:

To calculate the cooling airflow requirement for ICT equipment, you can use the formula:

$$\text{CFM} = \frac{\text{Power (kW)} \times 3160}{\Delta T (^{\circ}\text{F})}$$

CFM=Power (kW)×3160 For equipment consuming 6 kW with a Delta-T of 20°F:

$$\text{CFM} = \frac{6 \times 3160}{20} = 948 \approx 1,000 \text{ CFM}$$

Detailed Explanation:

This formula provides an estimate of the cubic feet per minute (CFM) of air required to cool the equipment based on its power consumption and the temperature difference (Delta-T) between intake and exhaust. The Delta-T represents the cooling effectiveness of the airflow.

EPI Data Center Specialist References:

EPI recommends using this calculation for determining airflow requirements in data centers, ensuring that cooling systems are adequately sized to maintain equipment within safe temperature limits.

NEW QUESTION # 98

Smoke sensors need to be tested to ensure that they pick up a potential fire in the data center.

What should you recommend?

- A. Press the self-test button on each sensor in the data center
- B. Test the sensors according to the vendor specification
- C. Test the sensors by injecting smoke or simulated smoke directly into the sensor
- D. Inject smoke at the floor level

Answer: B

Explanation:

Testing smoke sensors should be conducted according to the vendor specifications to ensure compliance with safety standards and accurate results. Vendors provide specific testing procedures to account for the sensor type, environment, and operational characteristics, ensuring that tests do not damage the equipment or provide false results.

Detailed Explanation:

Smoke sensors can vary by type and sensitivity, so following the vendor's recommended testing procedure ensures the sensors function correctly without risking sensor damage. Injecting smoke or using a self-test might be insufficient or could lead to inaccurate assessments if they do not align with the vendor's testing protocol.

EPI Data Center Specialist References:

EPI recommends adhering to manufacturer specifications for testing critical safety equipment, ensuring that tests reflect real-world conditions without compromising sensor integrity or reliability.

NEW QUESTION # 99

When installing a raised floor, can we use a spirit level bar to level the floor?

- A. Yes, but spirit level bars can only be used in the vertical plane.
- B. Yes, using a spirit level bar for raised floors higher than 40 cm is preferred.
- C. Yes, spirit level bars can be used as long as their length is longer than 60 cm/2 ft (the size of a typical raised floor tile).
- **D. No, because using a spirit level bar, a measurement error will be transferred from pedestal to pedestal.**

Answer: D

Explanation:

A spirit level bar should not be used for leveling a raised floor, as measurement errors are likely to propagate from one pedestal to the next. Spirit levels can introduce cumulative errors, leading to uneven floors, particularly in large installations where precise leveling is critical.

Detailed Explanation:

Using a laser level or a precision leveling device is recommended to ensure accuracy across all floor tiles. Spirit levels, while adequate for short spans, can transfer small inaccuracies from one pedestal to another, which can cause alignment issues and floor instability over time.

EPI Data Center Specialist References:

EPI data center guidelines discourage the use of spirit levels for raised floors. Instead, they advocate for precision tools like laser levels that ensure consistency and accuracy in large-scale installations, aligning with best practices for raised floor construction.

NEW QUESTION # 100

The UPS of a data center with ANSI/TIA-942 Rating-4 is installed with the rectifier connected to power feed A and the bypass/reserve input connected to power feed B. To which feed will the UPS output be synchronized?

- A. The UPS will not synchronize to any feed but use an internal clock
- **B. Depends on UPS settings, as it can be set to either feed**
- C. Feed B
- D. Feed A

Answer: B

Explanation:

Modern UPS systems can synchronize their output to an external reference, either from the rectifier input (Feed A) or from the bypass input (Feed B). Synchronization ensures seamless transfer between normal and bypass operation.

The configuration depends on user or vendor settings:

* If synchronized to the bypass (Feed B), the UPS can quickly transfer to bypass during overload or failure.

* If synchronized to the rectifier (Feed A), the UPS maintains stable output independent of bypass conditions.

ANSI/TIA-942 does not mandate which feed the UPS must synchronize to, only that redundancy be maintained across feeds in a Rating-4 design. Manufacturers typically allow the choice depending on operational preference.

References: IEC 62040-3 (UPS Operational Modes), ANSI/TIA-942-B §6.2 (Electrical Redundancy).

NEW QUESTION # 101

.....

Because the EXIN EPI Certified Data Centre Specialist (CDCS) test has a restricted time constraint, time management must be exercised to get success. Only with enough practice one can answer real EXIN CDCS Exam Questions in a given amount of time. It has created three formats to aid EXIN CDCS applicants in practicing and organizing their time for this aim.
