2026 Fortinet EMEA-Advanced-Support Fantastic Trustworthy Source

Computers are changing our life day by day. We can do many things on computers. Technology changes the world. If you have dream to be a different people, obtaining a Fortinet certification will be the first step. EMEA-Advanced-Support learning materials will be useful for you. As you can see the Forbes World's Billionaires List shows people starting bare-handed are mostly engaging in IT field. EMEA-Advanced-Support Learning Materials may be the first step to help you a different road to success.

Fortinet EMEA Advanced Support Exam Sample Questions (Q12-Q17):

NEW QUESTION # 12

What happens when a router receives a packet for forwarding with a TTL value of 1?

- A. The packet is only forwarded through the router to a locally attached network
- **B. The TTL is decreased to 0, the packet is dropped and an ICMP message is sent to the transmitting IP**
- C. It decreases the value to 0 and then forwards it
- D. It increments it and passes it on to the next router

Answer: B

Explanation:

When a router, such as a FortiGate, receives a packet with a TTL (Time to Live) of 1, it decrements the TTL to 0, drops the packet, and sends an ICMP Time Exceeded message to the source IP. This prevents infinite loops in routing. Option A is incorrect as TTL is decremented, not incremented; B and D are incorrect as the packet is not forwarded when TTL reaches 0. Exact extract: "When a packet's TTL reaches 1, the router decrements it to 0, drops the packet, and sends an ICMP Time Exceeded message to the source IP address to prevent routing loops."

NEW QUESTION # 13

In Active FTP who sends the PORT command?

- A. Both
- **B. The FTP Client**
- C. The FTP Server
- D. There is no PORT command in Active FTP

Answer: B

Explanation:

In Active FTP, the client sends the PORT command to the server, specifying an ephemeral port for the server to initiate the data connection back to the client. This distinguishes Active FTP from Passive FTP, where the server provides the port. The server does not send PORT, and the command is a key part of Active FTP. Exact extract: "In Active FTP, the client sends a PORT command to the server, specifying the IP address and port number for the data connection... The server then initiates the data connection to the client's specified port."

NEW QUESTION # 14

What happens when a FortiGate detects a SYN flood attack?

- A. It redirects traffic to a backup gateway
- B. It enables proxy-based inspection
- C. It drops all incoming packets
- **D. It applies rate limiting to SYN packets**

Answer: D

Explanation:

When FortiGate detects a SYN flood attack, it applies rate limiting to SYN packets via a DoS policy, dropping excessive packets to mitigate the attack. It does not drop all packets (A), enable proxy inspection (B), or redirect traffic (D). Exact extract: "FortiGate mitigates SYN flood attacks using DoS policies, which apply rate limiting to SYN packets to prevent overwhelming the system."

NEW QUESTION # 15

Firewall is performing stateful inspection for TCP traffic between Client 10.0.0.21 and Server 172.16.1.200.

- A. Traffic is Asymmetric and not allowed by the Firewall
- **B. Three way handshake was not completed**
- C. Traffic should be allowed
- D. The ACK was not supposed to be sent to client 10.0.0.21

Answer: B

Explanation:

Stateful inspection requires a complete TCP three-way handshake (SYN, SYN-ACK, ACK) to establish a session in the firewall's state table. If the handshake is incomplete (e.g., missing ACK), the session is not established, and traffic is dropped. The question implies a stateful firewall scenario where traffic is blocked, likely due to an incomplete handshake. Asymmetric traffic (B) or incorrect ACK (A) are not indicated without further context, and C is incorrect if the handshake fails. Exact extract: "Stateful inspection ensures that a TCP three-way handshake is completed before allowing traffic... If the handshake is not completed, FortiGate drops the packets as invalid."

NEW QUESTION # 16

What is the default FortiGate behavior when a packet matches no firewall policy?

- A. The packet is sent to the IPS engine
- B. The packet is logged and allowed
- **C. The packet is dropped**
- D. The packet is forwarded to the default gateway

Answer: C

Explanation:

FortiGate operates on a default-deny principle; if a packet does not match any firewall policy, it is dropped to ensure security. No forwarding (A), IPS processing (C), or automatic allowing (D) occurs without a matching policy. Exact extract: "FortiGate uses a default-deny approach; packets that do not match any configured firewall policy are dropped to prevent unauthorized traffic."

NEW QUESTION # 17

.....

Likewise, Web-Based Fortinet EMEA-Advanced-Support exam questions are supported by all the major browsers like Chrome, Opera, Safari, Firefox, and IE. In the same way, the Web-based Fortinet EMEA Advanced Support Exam pdf exam requires no special plugin. Lastly, the web-based Fortinet EMEA Advanced Support Exam (EMEA-Advanced-Support) practice exam is customizable and requires an active Internet connection.
