HP 인증HPE2-W12인증 시험공부자료는 Itcertkr에서 제공해드리는 HP 인증HPE2-W12덤프가 가장 좋은 선택입니다. Itcertkr에서는 시험문제가 업데이트되면 덤프도 업데이트 진행하도록 최선을 다하여 업데이트서비스를 제공해드려 고객님께서 소유하신 덤프가 시장에서 가장 최신버전덤프로 되도록 보장하여 시험을 맞이할수 있게 도와드립니다.

최신 HPE Sales Certified HPE2-W12 무료샘플문제 (Q20-Q25):

질문 # 20

Which advantage does HPE Aruba Networking Fabric Composer provide?

- A. It uses AI to detect issues and provide recommendations for addressing them

- B. It allows IT to provision both HPE Aruba Networking switches and APs.
- **C. It provides visibility into both physical and virtual networks.**
- D. It dynamically reroutes traffic when bottlenecks occur on the network.

정답: C

설명:

The correct answer is C because HPE Aruba Networking Fabric Composer is specifically designed to deliver visibility and simplified management across both physical and virtualized network fabrics in data center environments. It integrates with virtualization platforms (e.g., VMware vSphere, NSX) to extend visibility into workloads and virtual machines, alongside physical switches and fabrics. This unified visibility reduces operational complexity and ensures application performance.

Relevant extracts from HPE Aruba Networking documentation:

- * "Aruba Fabric Composer is an intelligent, API-driven orchestration solution that provides end-to-end visibility across physical and virtual networks."
- * "It enables IT teams to understand both physical topologies and virtualized workloads, reducing blind spots in data center operations."
- * "The solution integrates with VMware and container platforms, giving IT unified insight and control over hybrid infrastructures."

Why the other options are incorrect:

- * A Dynamic rerouting of traffic is a function of SD-WAN, not Fabric Composer.
- * AI-driven issue detection and recommendations are part of Aruba Central with AI Insights, not Fabric Composer.
- * Fabric Composer is focused on data center fabrics and virtualization visibility, not AP provisioning.

질문 # 21

A customer wants to know what makes HPE Aruba Networking ZTNA better than a traditional virtual private network (VPN). What is one key distinguishing value?

- A. HPE Aruba Networking ZTNA decreases complexity with its on-prem management platform.
- B. The cloud-based solution seamlessly scales to accommodate customers' growing remote workforce.
- C. The cost of the solution is lower than a traditional VPN because HPE Aruba Networking ZTNA uses HPE Aruba Networking gateways.
- **D. HPE Aruba Networking ZTNA shrinks the attack surface by automatically creating and applying least- privilege policies.**

정답: D

설명:

The correct answer is C because Aruba Zero Trust Network Access (ZTNA) fundamentally reduces risk by replacing broad, implicit trust models of VPNs with least-privilege, identity-based access policies. Instead of giving remote users blanket access to the network, ZTNA dynamically enforces application- and user- specific policies, shrinking the attack surface and preventing lateral movement.

Relevant extracts from official HPE Aruba Networking documentation:

- * "ZTNA applies Zero Trust principles by continuously verifying user and device identity and assigning least-privilege access based on contextual factors."
- * "Unlike traditional VPNs that extend full network access, Aruba ZTNA provides per-application access, dramatically reducing the attack surface."
- * "With automated policy enforcement, Aruba ZTNA ensures secure access while preventing unauthorized lateral movement across the network."
- * "ZTNA secures the remote workforce by combining granular access control with Zero Trust segmentation, delivering stronger security than legacy VPN models."

Why the other options are incorrect:

- * A Scalability is a benefit, but it is not the key distinguishing factor compared to VPN-least-privilege security is the core differentiation.
- * B Aruba ZTNA is cloud-native, not dependent on an on-prem management platform, so this is inaccurate.
- * D Lower cost is not the primary positioning; the value lies in enhanced security and reduced risk.

질문 # 22

An IT security admin's priority is to manage the security risks from a growing number of personal and IoT devices on the network. Which feature of HPE Aruba Networking Central should you emphasize?

- A. HPE Aruba Networking Device Insight provides real-time visibility and monitoring of all devices connected to the network.
- B. HPE Aruba Networking SD-WAN solutions send traffic to the data center for monitoring and behavior analysis.
- C. HPE Aruba Networking Unified Infrastructure eases integration in a heterogeneous environment and simplifies management.
- D. HPE GreenLake for Networking solutions require management services from HPE Aruba Networking, reducing the risk of human errors.

정답: A

설명:

The correct answer is A because Aruba Central with Device Insight provides real-time discovery, classification, and monitoring of all connected devices-including IoT, BYOD, and corporate endpoints.

This visibility is essential for identifying unmanaged or rogue devices, applying role-based access, and minimizing risks that come from a rapidly expanding device landscape.

Relevant extracts from official HPE Aruba Networking documentation:

- * "Device Insight in Aruba Central uses AI/ML to automatically discover and profile all devices, including IoT and personal endpoints, with high confidence."
- * "By providing continuous visibility and monitoring, Device Insight enables IT to detect rogue or misbehaving devices before they become a threat."
- * "Central integrates with ClearPass to enforce least-privilege access policies based on device type and context."
- * "This capability helps security admins close blind spots and manage risks associated with the proliferation of IoT and unmanaged devices." Why the other options are incorrect:
 - * B GreenLake for Networking is a consumption and service model, not a feature directly tied to IoT and personal device risk management.
 - * C Unified Infrastructure simplifies multi-domain management but does not directly address device-level visibility and risk.
 - * D SD-WAN does not solve the IoT/personal device visibility challenge; it is focused on WAN optimization and security.

질문 # 23

What is one use case for HPE Aruba Networking Central with AI for Networking?

- A. Simplifying the architecture of a data center attached to the campus.
- B. Enhancing custom applications developed in-house by integrating AI into the apps.
- C. Providing recommendations to optimize the network based on site comparisons.
- D. Enhancing the deployment of IoT devices by delivering an analytics platform at the edge.

정답: C

설명:

The correct answer is C because Aruba Central with AI for Networking leverages AI Insights and AI-powered benchmarking to compare site performance and provide prescriptive recommendations. This enables IT teams to identify underperforming sites, optimize configurations, and ensure consistent user experience across distributed environments.

Relevant extracts from official HPE Aruba Networking documentation:

- * "Aruba Central applies AI/ML to provide actionable recommendations, including benchmarking site performance against peer locations."
- * "By analyzing data across multiple customer environments, Central identifies best practices and offers prescriptive guidance for optimization."

- * "AI for Networking enables IT teams to detect anomalies, predict issues, and ensure site-to-site consistency by comparing against known baselines."
- * "With site comparison and recommendations, organizations can continuously improve performance and operational efficiency."
- Why the other options are incorrect:
 - * BIoT device deployment and analytics are supported by Aruba ClearPass and Device Insight, not primarily through Central's AI site comparisons.
 - * CAruba Central AI is for networking optimization, not for embedding AI into custom in-house applications.
 - * DData center simplification is achieved with Aruba CX switches and Fabric Composer, not Central's AI for Networking.

질문 # 24

How does selling HPE GreenLake for Networking solutions benefit Channel partners?

- A. They can offer their customers a significantly lower price per unit cost than a traditional networking purchase.
- B. They can include their company's services as part of an HPE GreenLake for Networking solution.
- C. They can sell HPE Aruba Networking solutions that are not available as traditional purchases.
- D. They can convert their existing customers to lease agreements to extend the customer engagement.

정답: B

설명:

The correct answer is D because HPE GreenLake for Networking is a consumption-based, as-a-service model that allows channel partners to embed and sell their own services as part of the overall solution. This strengthens partner value by enabling differentiation, recurring revenue streams, and deeper customer relationships.

Relevant extracts from official HPE Aruba Networking documentation:

- * "HPE GreenLake for Networking enables partners to include their own managed services, professional services, and support as part of the customer's subscription."
- * "With GreenLake, partners can move beyond one-time transactions and establish long-term engagements with recurring revenue opportunities."
- * "Channel partners gain differentiation by tailoring HPE GreenLake offers to align with their own expertise and service portfolios."
- * "This consumption model allows partners to deliver end-to-end solutions that combine Aruba technology with their company's services, enhancing customer value." Why the other options are incorrect:
 - * A Aruba networking solutions are still available via traditional purchase models; GreenLake is an additional consumption option, not an exclusive one.
 - * B GreenLake is not about lease agreements-it is a true consumption-based, pay-as-you-use model.
 - * C While cost efficiency may be realized, GreenLake is not positioned as a "lower price per unit" offer but as a flexible, scalable, and service-inclusive consumption model.
